## SCHEDULE 6

### Environmental Care Code

#### **Protect Plants and Animals**

Treat New Zealand's forest and birds with care and respect. They are unique and often rare.

#### **Remove Rubbish**

Litter is unattractive, harmful to wildlife and can increase vermin and disease. Plan your visits to reduce rubbish, and carry out what you carry in.

#### **Bury Toilet Waste**

In areas without toilet facilities, bury your toilet waste in a shallow hole well away from waterways, tracks, campsites and huts.

#### **Keep Streams and Lakes Clean**

When cleaning and washing, take the water and wash well away from the water source. Because soaps and detergents are harmful to water life, drain used water into the soil to allow it to be filtered. If you suspect the water may be contaminated, either boil it for at least three minutes, or filter it, or chemically treat it.

#### **Take Care With Fires**

Portable fuel stoves are less harmful to the environment and are more efficient than fires. If you do use a fire, keep it small, use only dead wood and make sure it is out by dousing it with water and checking the ashes before leaving.

#### **Camp Carefully**

When camping, leave no trace of your visit.

#### **Keep to the Track**

By keeping to the track, where one exists, you lessen the chance of damaging fragile plants.

#### **Consider Others**

People visit the back-country and rural areas for many reasons. Be considerate of other visitors who also have a right to enjoy the natural environment.

#### **Respect Our Cultural Heritage**

Many places in New Zealand have a spiritual and historical significance. Treat these places with consideration and respect.

#### **Enjoy Your Visit**

Enjoy your outdoor experience. Take a last look before leaving an area; will the next visitor know that you have been there?

Protect the environment for your own sake, for the sake of those who come after you, and for the environment itself.

### Water Care Code

#### **Find Out First**

Find out and follow the regulations governing recreational use of waterways and access. They are designed to minimise conflict between users and protect everyone's health and safety.

#### **Stay on Established Tracks and Use Existing Facilities**

By using existing facilities, where these are provided, you run less chance of disturbing wildlife and damaging riverbanks and foreshores.

#### **Take Care of Your Gear**

Careless use of equipment can harm wildlife and other users.

#### **Remove Rubbish**

Litter is unattractive, harmful to wildlife and pollutes water. Plan your visit to reduce rubbish, and carry out what you carry in.

#### **Dispose of Toilet Waste Properly**

Improper disposal of toilet waste can contaminate water, damage the environment and is culturally offensive. Use disposal facilities where provided or bury waste in a shallow hole at least 50 metres away from waterways.

#### **Be Careful with Chemicals**

Use chemicals sparingly, and refuel with care. Dispose of cooking or washing water well away from the source.

#### **Respect Our Cultural Heritage**

Many New Zealand waterways have special cultural, spiritual or historical values. Treat these places with consideration and respect.

#### **Take Only the Food You Need**

When taking food from the sea or freshwater, don't overdo it. Sustain life in our waterways by taking only what you need and no more than the legal limit.

#### **Consider Plants and Animals**

Remember we are only visitors to water environments. Other animal and plant species live there all the time.

#### **Consider Other People**

Respect other visitors ... everyone has the right to enjoy the environment in safety.

## SCHEDULE 7

### Didymo (and other freshwater pests) prevention guidelines

#### Stop the spread

Didymo is an invasive freshwater alga that can form massive blooms, smothering rocks, submerged plants and other material. Didymo is made up of cells that cannot be seen with the naked eye until large colonies form. It can take only one live didymo cell to be transported to a nearby waterway for didymo to become established.

Didymo is an unwanted organism under the Biosecurity Act, 1993. Under the Act, it is illegal to release, spread, sell or breed unwanted organisms. There is a \$100,000 fine or five years imprisonment for people caught doing so.

To ensure you do not spread didymo, wherever possible restrict equipment, vehicles, boats, clothing and other items for exclusive use in a single waterway.

The Concessionaire shall:

1. Before entering a waterway, ensure all equipment, clothing and vehicles that have been in contact with another waterway, have been decontaminated for didymo in accordance with the cleaning methods listed below.
2. When leaving a waterway, ensure all equipment, clothing and vehicles that have been in contact with the waterway, have been decontaminated for didymo in accordance with the cleaning methods listed below.
3. Not move fish, plants, rocks and other river/lake items between waterways.
4. Ensure felt-soled footwear is not worn in any waterway.

#### Cleaning methods - didymo

|  |   |   |  |
|--|---|---|--|
| <b>CHECK:</b> Before you leave a river or lake, remove all obvious clumps of algae and look for hidden clumps—leave them at the affected site. If you find any later, treat and put in rubbish. Do not wash down drains.                                       |   | <b>CLEAN:</b> There are several ways to kill didymo. Choose the most practical treatment for your situation which will not adversely affect your gear.  |  |
| <b>Non-absorbent items</b>   |   |   |  |
| <b>Detergent:</b> soak or spray all surfaces for at least one minute in 5% dishwashing detergent or nappy cleaner (two large cups or 500 mls with water added to make 10 litres);  | OR  | <b>Bleach:</b> soak or spray all surfaces for at least one minute in 2% household bleach (one small cup or 200 mls with water added to make 10 litres); |  |
| <b>Absorbent items</b> require longer soaking times to allow thorough saturation.  | <b>Hot water:</b> soak for at least 40 minutes in hot water kept above 45 °C; OR  |   | <b>Freezing any item</b> until solid will also kill didymo.  |
| <b>Hot water:</b> soak for at least one minute in very hot water <b>kept above</b> 60 °C (hotter than most tap water) or for at least 20 minutes in hot water <b>kept above</b> 45 °C (uncomfortable to touch).  | <b>Hot water plus detergent:</b> soak for 30 minutes in hot water kept above 45 °C containing 5% dishwashing detergent or nappy cleaner; OR |   | <b>NOTE:</b> The thicker and denser the material, the better it will be at holding moisture and live cells, the slower it will be to dry out and the more difficult it will be to soak completely with cleaning solutions. |
| <b>DRY:</b> Drying will kill didymo, but slightly moist didymo can survive for months. To ensure didymo cells are dead by drying, the item must be <b>completely dry</b> to the touch, inside and out, then left dry for at least another 48 hours before use. | <b>If cleaning or drying is not practical, restrict equipment to a single waterway.</b>   |   | <b>To report a suspected find of didymo, please call 0800 80 99 66</b>   |

NB: When decontaminating equipment for didymo, it is recommended that you:

- Soak porous materials long enough to ensure cleaning solution has gone right through the item before soaking for the required decontamination time and choose a decontamination solution that will not adversely affect your equipment.
- Follow manufacturer's safety instructions when using products and dispose of cleaning waste well away from waterways.

The above didymo decontamination measures are sourced from the MAF Biosecurity New Zealand website
