Minister's foreword

LEADING THE WAY IN ECOLOGICALLY SUSTAINABLE BUILDINGS, CONSERVATION HOUSE (WHARE KAUPAPA ATAWHAI) IS ONE OF NEW ZEALAND'S MOST ENVIRONMENTALLY FRIENDLY BUILDINGS WITH FEATURES STRONGLY CONNECTED TO THE EXTERNAL ENVIRONMENT.

As the Department of Conservation is the central government department charged with protecting the country's natural environment and historic heritage, it is only fitting that our Head Office reflects this responsibility. To work in a building that aims to save energy and produce sustainable outcomes is a significant step towards our commitment to conservation.

We are becoming increasingly aware of our 'ecological footprint', and sustainable practices must become a part of our everyday way of life. This environmentally friendly building takes the Department of Conservation to the next step towards sustainability. It is an investment in the future.

It is a credit to the teams involved in the design and construction. They have created environmentally friendly attributes that are not only great for the environment but also foster a workplace conducive for staff to produce their best work. It demonstrates a commitment to sustainability and reinforces a desire for "green" office practices with comprehensive recycling facilities.

This is an exciting move for the department and one that will see it in good stead well into the future.

CHRIS CARTER
Minister of Conservation
