Department of Conservation has management responsibility for just under 30% of the land area of New Zealand, as well as oversight of protected species, and the marine and coastal environment. Head Office and the conservancies of the Department produce a wide range of publications, from policy documents to recreation pamphlets. This catalogue features the scientific publications which are published by the Science and Research Division.

Science Publications are the result of scientific investigations undertaken in support of the management tasks of the Department. Research is published as stand alone books, as well as in several series including:

- *Science & Research Series* - a fully reviewed irregular monograph series reporting the investigations conducted by DoC staff.
- *Conservation Science Publications* - single volumes on conservation matters of national interest.
- *DoC Technical Reports* - instructional guidebooks, and data sets aimed at the conservation officer in the field.
- *Science for Conservation* - a fully reviewed irregular monograph series, reporting on the science investigations purchased from independent providers.
- *Conservation Science Advisory Notes* - notes in response to specific questions asked by Departmental staff, concerning matters which have arisen in the course of their management duties.
- *Science & Research Internal Reports* - progress reports on scientific matters on going in the Department.

The material in this catalogue is available to anyone with an interest in conservation. To order please use the form provided, or ring and discuss your needs with us.
