Some suggestions below:

What marine reserves have you visited with EMR?

I have visited a number of marine reserve areas: Poor Knights for diving back in the early 2000s, Goat Island for snorkelling & glass-bottom boat with my kids, Mimiwhangata for diving when my kids were older. The contrasts with areas where over-fishing and huge sea-floor damage have occurred are huge.

There is no life on the bottom of the Hauraki Gulf any more, just kina. Around Waiheke, s 9 (2)(a) but patchy...

The prawn and shellfish industry has destroyed hectares of sea-floor globally, the sheltered waters across the peninsula from the the famed Ningaloo Reef in NW Australia is one example. People travel to see sealife and are told "Ningaloo is the only place up here, as the rest is dead.". Don't let that happen in NZ!

Commercial fishing is just a race to vacuum up fish before somebody else does. There is no control, or even idea of what was there, unlike any kind of farming on land. Recreational fishing for a family or small community may be ok, but commercialisation just leads to the destruction of the marine environment as boats chase the scraps on a dollar-in/dollar-out basis.

Please help to restore the natural environment.

The existing tiny reserve areas shelter many species and allow natural balance, which over-fishing damages. More area under protection would allow more fish to actually grow and give people (locals & tourists) a healthy environment to appreciate, as well as allowing small businesses to show the results to them.

More protection, not more destruction.

Message

I strongly support much more marine protection for the hauraki gulf, particularly the outer Gulf

I have dived and snorkeled extensively throughout the Gulf, both inshore and off shore.

Te Hauturu o toi is such a significant environmental land feature, but waters around it are suffering with kina barrens and low fish stocks.

The mokohinau Islands are right in the middle of the important east Auckland current, bring rich nutrient waters down from the tropics, and feature magnificent underwater topography, also sitting on the edge of the continental shelf. I have seen many oceanic manta rays in this area, with large up-wellings of krill, critical food source for manta,

s 9 (2)(a)

The outer islands are also significant breeding grounds for threatened seabird species, who rely on the whole Hauraki Gulf as a critical food source.

With more and more stress on the inner Gulf, with increased fishing and land run off, sedimentation and acidification, it is only a matter of time before the outer gulf faces similar threats. We must protect this amazing ecological environment before it is destroyed, and strive to replenish the inner gulf and return it to what it once was.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Lived my adolescence and teenage years in the shadow of the Leigh Marinea...no one living in the area EVER said it was a Bad Thing. There are years of detailed reporting that does nothing but support the need for more well run Marine reserves throughout the Hauraki Gulf . Its not a want ... its required !

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Having studied Marine Biology in the very early 90's, you only have to look at Leigh and the Goat Island Reserve to see how having multiple Marine Reserves, dispersed around the Hauraki Gulf, can only benefit longer term for future generations to enjoy!

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Let's be good ancestors.

Marinas are not needed in the Gulf Islands. Putiki Bay is being spoiled by the development at Kennedy Point. I completely support marine reserves.

We are decades behind making appropriate decisions to protect sea life from decline in the Hauraki Gulf. I would have liked to see larger areas of marine protection because I have constantly seen the Mauri of the ocean compromised away. Personally I think we should flip our thinking on it's head and have designated and contained fishing and aquaculture areas with no extraction everywhere else. That's actually the only way to rapidly turn things around with the population pressure, fishing extraction technology, climate change and greed foisted on the Hauraki Gulf. However I know in this process small areas are suggested for protection. These are valuable for the beginning of recovery so I obviously support them, although they don't go far enough.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

I support the Revitalising the Gulf, Marine Protection Proposals package to establish new marine and seafloor protection areas to restore the Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi , however in my view it is not big enough and should be extended to achieve the goal of 30 % coverage of the Gulf.

Seachange began in 2014 and only now are we seeing meaningful action. The target for marine protected areas was 30% of the Gulf so this proposal falls short by a large margin. It must be progressed as quickly as possible to honour the process and the thousands of contributors - and to begin proper restoration of fisheries and ecosystems.

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Please also make sure the marine environment in the remainder of the Hauraki gulf park has bottom trawling removed to help re-establish the sea bed. It is like re-establishing a forest that has been destroyed.

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Seachange began in 2014 and only now are we seeing meaningful action. The target for marine protected areas was 30% of the Gulf so this proposal falls short by a large margin. It must be progressed as quickly as possible to honour the process and the thousands of contributors - and to begin proper restoration of fisheries and ecosystems.

I fully support all proposed areas receiving full marine park status as a starting point to restoring the health of the Hauraki Gulf. I would like to see a plan for how new areas will also be added to this over time.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

The Revitalising the Gulf proposals have the right intent but fall far, far short of what effective marine protection would be. It's a consensus among marine scientists that the most effective Marine Protected Areas - by far - are Type 1 marine reserves. Yet Revitalising the Gulf has no new marine reserves. Instead it proposed experimental 'High Protection Areas' based on customary take. These are similar to 'limited take areas' which we know do not work. The most relevant examples of this are Mimiwhangata in the Far North, a limited take area for over 40 years and monitored by Dr Roger Grace with no real improvement. Or the Poor Knights which were a limited take zone for 50 years from the 1920 to the 1970s. It's only when they became a proper marine reserve that they blossomed into the world-famous dive spot they are today. In the face of the undisputed crisis in the Hauraki Gulf, the Revitalising the Gulf proposals would be akin to the NZ government's Covid response being based on homoeopathy. It's beyond a no-brainer that what the Gulf needs is a network of marine reserves covering at least 30% of its area. The government and Forest & Bird should get behind the NW Waiheke Hakaimango-Matiatia Marine Reserve proposal - the only community-led marine reserve proposal that is current in the Hauraki Gulf right now.

I am a regular snorkeller in The Hauraki Gulf and I am seeing what's beneath the surface of the water deteriorate year by year. I have also through various marine centric roles read and even commissioned various marine surveys, and the message is clear, the ocean needs protection or we will all suffer.

We are decades behind making appropriate decisions to protect sea life from decline in the Hauraki Gulf. I would have liked to see larger areas of marine protection because I have constantly seen the Mauri of the ocean compromised away. Personally I think we should flip our thinking on it's head and have designated and contained fishing and aquaculture areas with no extraction everywhere else. That's actually the only way to rapidly turn things around with the population pressure, fishing extraction technology, climate change and greed foisted on the Hauraki Gulf. However I know in this process small areas are suggested for protection. These are valuable for the beginning of recovery so I obviously support them, although they don't go far enough.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Since 1981 I have had the privilege to visit the s 9 (2)(a). I have marvelled the nesting pinguines, the great variety of fish and mussels, the native plants and the complex sealife around those islands. But within the years I couldn't help to realize the rapidly progressing decrease of wildlife on and around the islands despite the desperate efforts of the owners and supporters to safe and renature as much as possible. It definitely and urgently needs a bigger picture/area to make a real change for good.

I support marine protected areas in excess of 30% of New Zealand's territorial waters, a ban on bottom trawling, and vastly reduced catch limits to allow marine species to recover and to reduce by catch of threatened sea birds and mammals.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Also end dredging and trawling. Potentially best if we close the hauraki gulf to any and all commercial fishing. Also protect Pūtiki. It's not too late to stop construction and restore the bay.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Save our environment! Large, well protected marine reserves are critical for maintaining biodiversity. I absolutely support the establishment of such reserves or national parks to ensure a beautiful environment in and all around Aotearoa.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Come on govt leaders! We all know how important ocean health is and we cannot afford to let such a significant marine area as Tikapa Moana /Hauraki Gulf to degrade any further. Please urgently set in place the 19 proposed protection zones before a total ecological collapse in the Hauraki Gulf. Surely you don't want to leave that legacy?? Please do the right thing.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Goat Island is a glimpse of what we have lost. Snorkeling at Goat Island marine reserve and then at unprotected Matheson's Bay is like day and night and is a stark reminder of what over extraction does to the marine environment.

It is not a lot to ask for the reward we will get, look at the effect of Tapu Terenga in Wellington, and many others, for how small frequent sanctuaries invigorate biodiversity and also give pride to the locals (as well as reliable fish stocks). We, in s 9 (2)(a) would love to see the long term effects of fishing exclusion areas, while maintaining our right to access our food sources. In my experience, fisherpeople are extremely keen to respect allocated protected areas. Our fishing spot is off the beach 200m south of the estuary at s 9 (2)(a) In summer the other end of the beach is fished, but there is a small stock of natural mussels that is vulnerable. We also have pet eels.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

I have read the Plan Fro revitalising the gulf and see it as a very easy and simple fix. Im sail and fish the Gulf and would like to see the plan go further.

I was shocked by the state of the Gulf when I lived in the s 9 (2)(a) in the 1970s, so if things have got worse since then they must be dire, and distressing. Urgent, drastic action is needed.

Any new protected areas over and above the tiny bits which are protected now is good. However, this plan does not go anywhere near far enough. It is common knowledge in the scientific community that approx. 30% in area of each habitat needs to be protected to have a meaningful impact on the ecosystems in the surrounding areas. 6% is just not enough. Makes me want to cry that it took 10 years to achieve so little...

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

I spend time at sea in this area and can see starving penguins and kelp disappearing. There is a direct relationship to sediment run off and over fishing particularly recreational fishers. It's time to give it rest and even help (pulling out kina and planting kelp). NOW!

Protection of marine reserves is the most feasible evidence-based policy to reverse some of the damage, and enable a livable home for our children, grandchildren, and their descendants. Please listen.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Tīkapa Moana/Hauraki Gulf is Auckland's most defining characteristic, Thousands of people use it daily, but most don't realise what a terrible state it has got into. My children are amazed when we see a single fish, and sad when they find plastic on the beaches. We need better marine protection for the Hauraki Gulf (including protection against trawling, seabed mining and sand mining) so that there are still fish left for our future. Marine parks is a good start, although a key need is also a reduction of silt/runoff from the land, so tht areas such as the Firth of Thames can recover, and the mussel beds of the Waitemata can be replaced.

Without urgent action to protect our gulf, there will be no fish, no birds, just a bleak expanse of empty water.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

while broadly supporting the F&B submission on the Hauraki Gulf Maritime Park, I'd like to add some cautions. The problem is more than just one of marine protection (including fish stocks); it is one of conserving human-modified ecosystems, land and sea together. The Maritime Park concept for both Hauraki Gulf and Marlborough Sounds was sound but it has largely failed to deliver for lack of coherent policy and resourcing by successive national governments. While local governments may seek to implement integrated planning for these terrestrial plus maritime environments they have too many competing interests to satisfy. At the very least there need to be independently funded Park Boards for both Parks, with remits akin to those for English National Parks (which have cultural as well as natural landscapes) rather than those of New Zealand National Parks which are heavily into 'natural' environmental conservation

Protecting specific marine areas from fishing creates the opportunity for fish stocks to thrive and grow, resulting in fish moving beyond the protected areas, replenishing the fishing stock and re-balancing the ecosystems that depend on their existence. It is a win for everyone.

I have witnessed the decline of much of the marine habitat around the New Zealand coast. It would be good to start with the rescue of the Hauraki Gulf and then continue right around the coast. My Generation has a lot to answer for in regard to habitat and species depletion. It would be nice to ensure that our grandchildren will have something to look forward to.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

As a 5th generation New Zealander I hope the gulf can be bought back to where it was. I have memories of collecting pipi as a child and hope to share similar memories with my own children.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

As a recreational and commercial user on the gulf, I strongly support any actions to restore and protect it's unique ecology. If we do not take immediate measures to do so, our failure will be an ongoing calamity for ourselves and future generations of New Zealanders.

As a visitor to NZ. (Family)

I believe it is essential to protect as many marine areas as are possible. This also includes cleaning up.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

It is vital we delay no longer and put in place a robust network/ corridors of marine reserves to establish 33% coverage of the Hauraki Gulf if we are serious about retaining our bio diversity and a chance for restoration. Alongside a stop all dreading and other destructive fishing practices

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Beyond Sea Change, I wish to see marine protection go further, with at least 10% of EEZ being marine reserve and 20% being high protection areas. New Zealand can once again lead the world in ocean conservation.

This is long overdue and constantly frustrates me that a supposedly bright population can allow something so stupid to continue for so long. Further, the ocean is an incredibly important store of Co2 which is not helped by the effects of over fishing that is so prevalent in our waters. Go have a look a mission blue on Netflix.

We must protect and restore our oceans and the Hauraki Gulf is so depleted. I am an ocean swimmer and can see the damage, the kina barrens the lack of kelp beds, the lack of fish, the constant noise pollution of boats. Cut quotas, stop trawling, this is about all life. Stop appalling bad management of building projects pouring so much waste into our oceans. Adopt and set up projects like Twin streams to have clean waterways that feed into the gulf as well as restore what is so plundered and disrespected by our species destructive and sloppy behavior. Only humans create waste that cannot be processed naturally. This is about life and death not a playground.

Its time to start reversing the pattern of depletion and to put resources into stemming decline of the marine environment and to begin to revitalize. Before it is too late. This much be step 1. More needs to be done to reduce the senseless taking of fish/shellfish stocks by the general public and commercial operations.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

It's almost too late! Please protect our marine life. The Hauraki Gulf is dying. there will be great benefits for everyone in the years to come if it's protected.

The more that can be done to protect the Hauraki Gulf, the better. Work with tangata whenua (all iwi / hapu in the wider area) to establish rules. Don't give in to the boaties and dieselheads! Protect the Gulf for our future generations

I attended the Hauraki Gulf Forum conference and the following two points are topmost in my mind.

- 1) Discounting the cable channels, which are of zero ecological value, the proposal will result in just 6% of the gulf being protected. This is woefully short of the 30% recommended by science.
- 2) Waterways that flow to the gulf are crucial, They all need to be protected, planted, and have stock and nitrogenous fertilizer excluded.

The Hauraki Gulf—once one of the most productive marine areas on the planet, is withering under fishing pressure, diminished in biodiversity and riddled with urchin barrens; the smoking gun of ecological collapse.

The time has come to fix it!

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

Inside marine protected areas, fish are around seven times more abundant, with more large snapper and crayfish that maintain lush kelp forests. Those benefits radiate outwards, feeding and replenishing unprotected waters.

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

I've always thought there should be a better system for protecting our maritime environment. For instance in the popular Marlborough Sounds why could there not be a revolving system of complete closures. Existing coastal reserves have already proven that the fishery can recover with spillover into adjacent areas. So why not designate areas and close them for 10 years then open them and rotate the closure to a further set of areas. But have some catch restrictions specifically on the areas that have been reopened.

Considering the gulf is a spawning area for snapper (*Pagrus auratus*) I think it should be protected from bottom trawling, a process that decimates the seafloor. Currently bottom trawling is permitted through the Colville Channel and for most of the area between Cape Rodney and Aotea thus intercepting fish moving into the gulf to spawn.

The widespread occurrence of urchin barrens in the gulf is a direct result of overfishing crayfish (*Jasus edwardsii*). Protect the entire gulf.

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

I love swimming along the beaches and cliffs of Auckland's North Shore. Restoring the Hauraki Gulf ecosystem would make this great coastline even better. The Gulf is our neighbourhood, and there's no justification for the big commercial trawlers ravaging the seafloor.

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

If we don't save these areas, then we will all end up with a destroyed gulf. We have already done serious damage to the seas and oceans around NZ. Including sea floor trawling, which is steadily extinguishing the bottom of the food chain for sea life. Do we want only urchins to survive? Because that is what you get with insufficient regulations. We need about half of New Zealand's coastline in protected reserves, if we wish to have plentiful fish and other healthy sea life.

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

I am a s 9 (2)(a) and I am extremely aware of the poor state of the Hauraki gulf. The only way to regenerate and protect the biodiversity is to make marine reserves. I understand that ideally 30% of the ocean should be protected. We have a tiny fraction of that and urgently need to protect more. Please do this.

The Gulf needs to be protected - a ban on Commercial Fishers (set & trawl) should have been implemented YEARS ago. Additional Staff to patrol and ensure limits are STRICTLY enforced & increase the fines and seizure tactics.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

This is incredibly important - our sea and land waterways are declining at an alarming rate - seem to have reach some crucial point with subsequent accelerated decline.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

Protected areas should be fully protected, absolutely no take. There are plenty of other areas to fish and it defeats the purpose, as well as creating separatism.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

so many people enjoy the experience of swimming and snorkelling around Goat Island as it is the best example of what a restored ecosystem looks like rather than the barren areas in much of the Hauraki Gulf. Please put in protection measures such as more marine reserves so we can leave a legacy for future generations. Time is running out to protect all parts of our planet.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

We need to protect this gem

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

As my daughter and her family are living in NZ I'm extremely interested in the protection of NZ's environment. We only have one globe. A healthy environment will protect all Kiwi's health and wellbeing.

Marine protection is extremely important and you can see in the Marlborough Sounds and other marine reserves how effective it is. 1000% support this.

This is the minimum needed to begin protecting the world's biggest sea bird Gulf - Hauraki Gulf. E actually need even more. The Hauraki Gulf is home to a larger variety of sea birds than any where else in the world. But there are not enough fish in our Gulf to sustain our birds and they too are endangered and in rapid decline. Please act urgently. People can live with less fish in their diets. Birds can't.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Strong marine protection is urgently required for the Hauraki Gulf. We have failed to protect our marine environments with catastrophic results. It's way over time to make a stand and try and turn things around.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Because this is important!!

Marine protection is really important in the short term to prevent further decline of biodiversity and ecosystems. It would be good to simplify the system having more clear boundaries and fewer categories to ensure compliance.

Please consider this as a genuine submission, and of equal value to if I had written this out in full myself. There are so many issues I care about and it's difficult to write a specific submission for each one. Our environment needs our voice to be heard on its behalf as it doesn't have its own. Please provide maximum protection!

I believe that you need to create larger areas of no dredging than proposed. Great to see though that the protected areas will be much larger than current areas.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

This is a great start towards protecting 30 percent of New Zealand's marine area, and essential in order to help maintain the health of the area given acidification and rising sea temperatures driven by accelerating global warming. Thank you for this initiative.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

This is a no brainer. Haven't we worked out yet that the needs of us humans are way down on the priority list. The needs of the ecosystem and the multiple varieties who need it to exist is right at the top of the list. We have to stop being so selfish and self centred and get on with it. Can't we see the planet is SUFFERING. It's our job to fix it. STOP making excuses and bowing to pressure from vested interests and people who can't see past the end of their nose.

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Large tracts of ocean need protecting and restocking. Fishing and pollution have caused tragedy. Selected protection areas are overdue by fifty years. The chances of restoration are already slim. No discussion is necessary. This is our responsibility.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

I support this, however there needs to be a balance, enabling recreational fishers to continue responsible fishing, but at the same time, working toward a replenished Hauraki Gulf.

Clearly needed. It's not about public opinion or livelihoods as humans will always find another job or pastime. That was the argument of the kauri loggers and Atlantic cod fishermen- and look what happened there. The fishermen and loggers adapted but there were no fish left to adapt.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Let's actually do some good for our ocean. Protecting what we are destroying.. the only way forward to bring back a balance that benefits the WHOLE ecosystem that includes us humans!

Ngā mihi,

I am not sure this proposal is enough. It is my hopes that it is. The Maui dolphin is now functionally extinct. As are other dolphin and dugong species. I don't think we can save it. But we must think of it as the canary in the coal mine. Showing how unhealthy our oceans are.

Trawling and net fishing needs to be stopped in addition. And dumping sewage, and untreated sewer and drain waters.

Marine protection is needed in many areas of New Zealand's coast and this would be a great opportunity for the future of marine environments

I would love us to reverse how we view marine sanctuaries, and instead. Everything becomes a marine sanctuaries, and we have small areas where fishing can occur. Can you even imagine how much better that would be if we could make that fundamental change???

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

California is currently completing its decadal review of its network of 124 marine protected areas (MPAs) along our 1600km coastline. After 10 years in place, our marine reserves are demonstrating their ability to protect coastal and marine biodiversity and support healthy, resilient habitats. With our network of MPAs, California's fishing and coastal tourism industry will continue to benefit for years to come! It is my hope that New Zealand will draw inspiration from success stories from other countries and join us in our efforts to protect 30% of the global ocean by 2030.

While I acknowledge the customary fishing rights of mana whenua, I believe the HPA's should exclude all New Zealanders from the activities to ensure that Takapa Moana can recover fully in these areas.

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

This is something but there is also a marine reserve application awaiting approval the Hākaimangō-Matiatia (Northwest Waiheke) Marine Reserve. It would be wonderful if the government would be brave enough to approve this reserve.

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

It is worrying to witness the decline in marine life including sea birds in the Hauraki Gulf. We need more marine reserves urgently where nature can repair and rebuild.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

'No take' marine reserves are a proven tool in maintenance and restoration of populations. When working well, 'spill-over' of both larvae and adults can bolster adjacent areas and those further afield, boosting opportunities for fisheries. The Gulf has been over-exploited for decades. It will likely show recovery, albeit moderated by climate and ocean disruption, if these measures are adopted and enforced. The scale of cumulative impacts is growing rapidly, so these measures are needed urgently.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

It has been proven that marine reserves boost neighbouring fish stocks too, so this is a win-win move

Marine reserves are essential for both the health of our oceans and the sustainability of our kai moana. I absolutely support this proposal and would like to see a great many more reserves in New Zealand waters.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

I consider the proposed protective measures to be of immense importance to the restoration of these marine environments that relentless human activity has all but killed off. Consequently, these proposed remedial steps should be the least that are put in place to redress the balance. Thank you.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Go back to original setup plan with Seachange and all the other stakeholders mentioned, rework, add or tweak plan to bring it forward into the future. Frittering money away on more talks, meetings etc is sheer waste. Do not re-invent what is already written!

Time is of the essence and we as a people do not have that to umm & haa over what is genuinely a critical issue.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Ban trawling Would also be a good start

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

As part of a swimming group we see first hand the degradation of the sea floor and minimal fish and crustatians, lots of kina barrens and deserts without kelp or seaweed. It is shameful. Note the incredible resurgence of fish from the huge marine reserve in Hawaii waters. Lets get our skates on and protect and restore the Hauraki gulf and all life. It is madness not to do so.

It is very well known and a scientific fact that no take marine reserves result in more fish, not less, as many obstructive fishermen seem to think. There has been broad support for more marine reserves (actual reserves, not controlled areas) in a declining gulf with a pathetically tiny amount actually protected. Bully groups of scientifically challenged people need to be given the amount of attention they deserve, and something meaningful needs to be done for a change, a change for good.

The state of decline in the Hauraki Gulf is clear through the decline in numbers of our species, their inability to thrive (such a seabird starvation and nest abandonment) also the nutrient content and numbers of fish species within the gulf. Protections are very much needed and they're needed now!

It makes me deeply sad to see the Hauraki Gulf so depleted and degraded.

Forty years ago, I sailed often in the Gulf, and the waters then, teemed with life. I remember bays crammed with crayfish, and little blue penguins were always seen bobbing about.

If abundance and diversity can be restored, it will be essential that extensive marine protected areas be established and maintained, it is also critical that these areas are monitored and patrolled, in order for them to be effective.

In addition, the cruise ship industry needs regulating. Some cruise ship companies choose to use the cheapest, heavy fuel oil, containing highly polluting levels of sulfur and heavy metals etc. It needs to be regulated, that cruise ships choosing to use heavy fuel oil, are not permitted to visit.

The Hauraki Gulf is an important ecosystem not just locally, but globally. We must act decisively to restore and protect it, so future generations can once again, enjoy and cherish it's abundance and diversity.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

This and more are desperately needed. Stopped fishing and started just enjoying the marine environment a couple of decades ago

We're idiots if we don't set aside "productive" areas of the gulf as a strict no-take zone now.

I understand the reservations of many about loosing some of the fishing areas close to their home, yet the reality is that if measures aren't put in place, they will loose the stocks and have minimal fishing any way. This is an important ecological area of marine diversity on the planet, and New Zealand has the honour of being able to protect it.

It is criminal that sand mining and sea bottom trawling are allowed anymore. And greedy and short-sighted that the fishing industry think this is still ok!

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Let's protect the marine habitat of the Hauraki Gulf, and hopefully, this will extend to any other area in New Zealand that requires protection.

The Harukai needs extra protection now more than ever. It is such a unique, valuable habitat in the eco systems it holds. Health and biodiversity of the oceans is so much more important, long term, than fishing and other human activities that have relatively short term gain, and long term damage.

I also support further protection of the Hauraki Gulf than what is proposed here - to at least 30% in line with international recommendations. All actions to prevent ongoing harm to our marine ecosystems AND enable its regeneration, are not only urgent and critical, but they benefit everyone, in particular, people who fish!!!

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Aotearoa is an island nation with strong ties to the moana. Therefore, we need to increase protection of the marine environment to be equal to protection we have for our flora and fauna on land, to safeguard its future. Our children and grandchildren depend on us taking action now, so please do the right thing.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Please listen to the Marine scientists who are proposing this. The reserves we currently have are simply not big enough and more are urgently needed. Lost fishing ground now protects fish stocks for the long term, this shouldn't even be a debate.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Take away all commercial fisheries and only allow at limit for recreational fishibg and gathering!!! THIS WILL HELP REPLENISH OUR SEAS! We are not going to have anything left in the next ten or 20 years at this rate! DO SOMETHING ABOUT IT NOW NZ GOV'T! WHEN ARE YOU GOING TO PUT YOUR PLANET FIRST. Money isn't going to help anyon when we have nothing left to buy

While s 9 (2)(a) While the resolution did not specify full marine reserve protection I believe that level of protection is needed and the Noises and NW Waiheke MR applications should be fully accepted.

Thanks for considering this input.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

At least 10% of coastal areas should be TOTAL Marine Reserves - no fishing by any group.

Ngā mihi,

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

there is a huge sports fishing club lobby here on the Coromandel and they are actively campaigning to do away with ALL marine reserves. This lack of scientific reasoning is scary and selfish. The Te Whanganui a Hei Marine reserve is particularly under threat. As is the proposal to control fishing around the Aldermens. I now have a 3 month grand daughter. these selfish pricks need to pull back and have a good hard look at what ensures the vitality of the Gulf for the long term.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

I am in full support of this proposal.

In 50 years they will be thanking this generation if you enact this plan.

In my 40 years of snorkelling/ diving the Gulf I have seen a significant decline in health.

I am a s 9 (2)(a) how has spent a significant amount of time documenting what is underneath the surface of the Hauraki Gulf. From decimated crayfish numbers, Invasive species, destroyed seabeds from scallop dredges and bottom trawling, a significant increase in sediment and a lot of our sub tidal rocky reefs being affected by underwater deforestation, or Kina barrens. (with the vast diversity of life disappearing with the kelp forests).

Please place greater weight in the science than loud voices that oppose the plan. The Hauraki Gulf is truly a national Taonga. Up to this point in time there has been a lot of focus on reestablishing the biodiversity of its many islands, but little consideration to the health and importance to its underwater ecosystem, that makes this area such a national treasure.

There is no greater example of this than that of Little Barrier Island. NZ's first established Nature reserve, declared in 1897 and widely acknowledged as one Aotearoa's most intact ecosystems (on land). Yet entering the waters around the island you will encounter hectares of barren rock covered in Kina, that used to be underwater forests. Climbing out of the water you immediately hear the loud bird song resonating from the island. While immediately below the surface there is a defining silence. Please let's try to replicate below the surface of the Gulf, what has been such a high priority above it!

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Over almost 30 years I have watched the demise of the Hauraki Gulf. As sea kayakers we have seen the diminishing sea life in the area. The protection zones should make a significant difference to the health of the Gulf

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

I support the submission proposed by Forrest and Bird to establish all 19 areas of marine protection in the Hauraki Gulf.

I have been fortunate to snorkel in the Goat Island Marine Reserve (almost) every year since 1979. (Covid!) I have witnessed the regrowth of the kelp forest in the reserve and the return of some marine organisms that scientists were unaware should be present there when they established the marine reserve in 1975. In contrast, the non-protected areas of the Hauraki Gulf have been further drastically depleted.

Although scientists have yet to amass a complete set of data to ascertain the best way to restore our marine environment, (or at least slow down the destruction), it makes perfect, urgent sense to put some areas of the Gulf aside as comparable control sites. In the very least, it will provide a snapshot of what we currently have left... and hopefully, like the Marine Reserve at Goat Island, the protected areas will transform back to the wild, healthy marine environments that were present prior to the 1950's.

We need to clean up the mess and return a healthy sea to the future generations.

Thank you for reading my submission.

I would have liked to submit this by email to DOC but the link is not working.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Our oceans deserve respect & protection. It infuriates me that it is continuously exploited, killing billions if not trillions of oceanic creatures & plant life because of HUMAN GREED. The Hauraki Gulf is in a shocking & terrible state, particularly due to commercial fishing, specifically trawling. There are orca, dolphins, stingrays, whales, crustaceans, fish & plants whose lives DEPEND on that environment for their survival & these damn commercial fishing companies go in there & rape & pillage it. IT NEEDS TO STOP N-O-W!!!

Numerous reports have indicated the poor condition of the Hauraki Gulf and only a tiny fraction of the gulf is given protection. I support establishing at least 19 new areas to protect and to enhance the health of the waters of the gulf.

I strongly support the proposal:

- Strongly support the extension of the two marine reserves under the Marine Reserves Act 1971 (ie not as a High Protection Area around the existing marine reserves).
- Strongly support the establishment of the 12 proposed High Protection Areas (HPAs). This is a crucial first step towards revitalising the Gulf and developing a comprehensive network of highly protected areas.
- Support the proposed Seafloor Protection Areas (SPAs), but suggests that these areas be considered and incorporated as part of the Hauraki Gulf Fisheries Plan in order to protect a much larger proportion of the Gulf from bottom-impact fishing.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

We must increase our marine protected network. The science is clear and we need additional reserves to help protect our coastal ecosystems as well as our economic resource. There will of course be some local opposition as people resist change and local restrictions but once in place they will be welcomed and cherished as we s 9 (2)(a) residents do for Goat Island.

The Hauraki Gulf is a taonga & should be free of commercial fishing & with strictly controlled recreational use. I have been sailing on the Gulf & watched trawlers fishing at the base of Moehau which is a schnapper nursery. I have witnessed deterioration underwater over my lifetime. Only prohibition will provide protection as policing certainly doesn't. Let's not delay this protection with endless talk. Please act now.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Submission on the Revitalising the Gulf, Marine Protection Proposals package

Kia ora,

I support the Revitalising the Gulf, Marine Protection Proposals package to establish 19 new marine protection areas to restore Hauraki Gulf Marine Park / Tīkapa Moana / Te Moananui ā Toi.

Marine protection is the only proven way to restore an ecosystem to full health. An intact ecosystem is also more resilient to external pressures such as sedimentation, pollution and the impacts of climate change.

We have seen the direct benefit of marine protection at Goat Island and the Poor Knights. The proposal to protect a range of small areas in the Gulf will bring the same benefits to the wider marine environment, feeding and replenishing unprotected waters.

The Government must act with urgency to set in place all proposed 19 protection zones in the Hauraki Gulf Marine Park. The Hauraki Gulf is in a biodiversity crisis and ecological collapse. It is time to act for the benefit of future generations and the mauri of our precious moana.

Strongly support marine reserves and parks. Enough to make it an issue for me when it comes to voting!
