The Doc 200 has passed ‘draft’ NAWAC (National Animal Welfare Advisory Committee) guidelines as a humane kill trap for stoats, rats and hedgehogs. These setting instructions must be followed to meet these guidelines.

**Step one**
Locating and screwing the trap in the tunnel:

- Use size 6 x 25mm rust proof screws
- Traps should be fixed with the treadle 5mm(approximately) from the side of the box and the baffle.

**Step two**
Setting the trap:

- Pull carefully on the wire setting loop with your hand. Continue past the top of the trigger arm, allowing the trigger arm to drop onto the treadle.
- SLOWLY release pressure, allowing the bottom of the trigger arm to gently ride up treadle and catch on the sear.
Traps are available direct from the manufacturer, Curtis Metal Products.

Traps in boxes can be purchased direct from Haines Pallet Co.

Predator control advice, trap development contacts and feedback.

Safety clip application (one clip per order)

These Department of Conservation ‘current best practice’ tunnel designs must be used with DOC 200 traps. These tunnels are designed to exclude non target species, guide target species and provide public safety.

**Single set tunnel design.**

In areas where weka are present, the tunnel length is 525mm, the distance from the end mesh to the internal mesh increases from 130mm to 255mm.

**Materials**

- All timber H4 treated radiata or similar.
- Ends and baffles 20mm galvanised weld mesh.
- 160mm galvanised decking nails.

All traps must have hazard warning on lid.

These Department of Conservation ‘current best practice’ tunnel designs must be used with DOC 200 traps. These tunnels are designed to exclude non target species, guide target species and provide public safety.

**Double set tunnel design.**

In areas where weka are present, the tunnel length is 950mm, the distance from the end mesh to the internal mesh increases from 130mm to 255mm.

**Materials**

- All timber H4 treated radiata or similar.
- Ends and baffles 20mm galvanised weld mesh.
- 160mm galvanised decking nails.

All traps must have hazard warning on lid.

- Lid labelled with project information
- Lid pivots on 60mm decking nail
- Ends and baffles 20mm weld mesh
- Lid secured by 40mm screw or coach screw
- Saw grooves
- Spacer 200 x 40 x 25mm
- Internal baffle hole 3 x 4 meshes, aligned just off the centre of the treadle -see setting diagram
- 60mm decking nails

**Drawings, Phil Waddington**
