2015-2018 WARO land determinations where specific issues have been raised that may required increased or decreased WARO access												
District	Protected area name				Current WARO Status	Recommended changes	Justifications	REVISED LAND RECOMMENDATION & REASON FOR THIS				
Nth Canterbury	St James Conservation Area (78,592.9469 ha)				Not permitted/restricted (status updated 1/8/18 to reflect current access status JW)	Restricted	Protect natural values and provide recreational opportunity by managing an area where recreational hunting will be given priority for wild animal control / CMS policy 2.3.12 and 2.3.13 and 2.3.14, in request from public submissions in the development of CMS policy, and as requested by NZDSA for the closure of ST James from WARO, re policy 2.3.14 any exclusions on commercial hunting on the eastern Spenser Mountains should be complementary to the adjoining Nelson Lakes National Park values - re Management plan (seasonal closure for this part). essentially close for WARO all PCL lands east of the Lewis Pass highway to the Waiau river and north to the Ada river.	CMS reference / Note WARO status for St James is not correct as it is currently part open and part closed. Closed or Restricted - become open to WARO if rec hunting or other methods of control cannot prevent wild animals (mainly deer) from creating adverse impacts (stopping natural processes to occur and or local loss of natural values) on natural values.				Align with Nelson Lakes National Park dates i.e. open to WARO 1 June – 31 October. St James is held for conservation purposes and whilst CMS Policy gives priority to rec hunters up to Malings Pass, this doesn't mean WARO should be excluded year-round.
Nth Canterbury	All lands in Nth Canterbury, currently open to WARO				Permitted	Temporary closure to WARO during the roar period	As recreational hunters remove annually more wild animals than WARO, consider ways where they can be even more effective. This can occur by improving recreational hunters hunting success rate through maximising the most desirable time recreational hunters are active and can be most effective e.g. roar period closure from WARO from 20th March to 20th April	Restricted (time periods)				Status quo but with extended roar period consistent with south island change.
