In the interest of forest conservation, we support paperless electronic publishing.

Context

Mautohe Cathedral Cove is included in the Department of Conservation's (DOC) premier 'Short Walk' visitor experience product portfolio. A monitoring and evaluation programme of Mautohe Cathedral Cove was undertaken during the summer months of 2024. The objective of the programme was to measure the performance of the Mautohe Cathedral Cove visitor experience following the loss of walking access as a result of Cyclone Gabrielle. This report presents the top-line results from the 2024 survey.

Performance of the Mautohe Cathedral Cove visitor experience has been measured against the same intervention logic applied to all experiences in DOC's 'Short Walk' portfolio; specifically, with respect to the following three 'Outputs' and two short term 'Outcomes':

- 1. Visitors' expectations of, and the benefits they seek from, the products are well understood;
- 2. Products included in the portfolio are well aligned with visitor preferences regarding amenities, design, and maintenance;
- 3. Marketing campaign is raising awareness of both the branded portfolio and individual products;
- 4. Numbers of visitors using the products have increased, including across season and region;
- 5. Products meet or exceed visitor expectations.

The survey draws on measures related to the following indicators from DOC's Outcome Monitoring Framework (OMF):

- 3.1.1 Current demand for recreation on public conservation land and waters;
- 3.2.2 Opportunities, facilities and services provided meet customer expectations and preferences.

The 2024 survey used the 'Short Walk' questionnaire previously used over four summers of 'Short Walk' performance monitoring (2017-2021). While the questionnaire was essentially unchanged, some minor edits were made to capture data reflective of the post-cyclone Mautohe Cathedral Cove access restrictions.

By comparing the 2024 results with the results from previous years' 'Short Walk' surveys, definitive statements can be made with respect to whether or not water-only access has had any influence on the satisfaction of visitors with key elements of the Mautohe Cathedral Cove experience, and with the entire experience overall. This comparison of 2024 results with past results is reported separately.

Methodology and sample

Visitor surveying was undertaken between 27 January 2024 and 29 February 2024 at three locations: Hahei, Whitianga and Cooks Beach/Purangi.

Each site was visited three times during the programme. Surveying was done at each site on multiple days. A probability (random) sampling technique was employed using the 'next available respondent' sampling approach. The target population was all visitors to Mautohe Cathedral Cove. The sample frame included all visitors aged 18 years or over present at the sites while in-situ monitoring was in progress.

Survey respondents self-completed a total of 204 questionnaires. Demographic data

were gathered for each respondent, plus up to three other members of the respondent's group yielding a total demographic sample of 475 visitors.

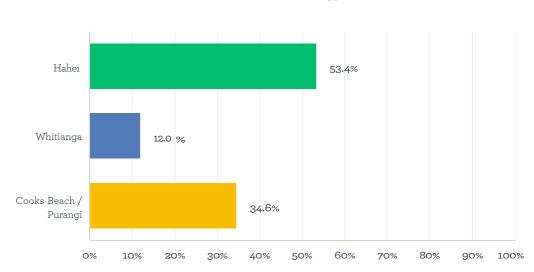

Note: Given the questionnaires were self-completed by respondents, errors may occur from time-to-time. These errors typically entail incomplete responses to questions or missed questions. Such errors are reflected in the 'Skipped' figure - this is displayed under the question header.

Due to time constraints, full quality assurance of survey data was not possible.

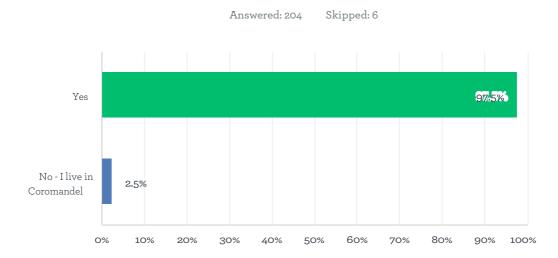

Results

Survey Location

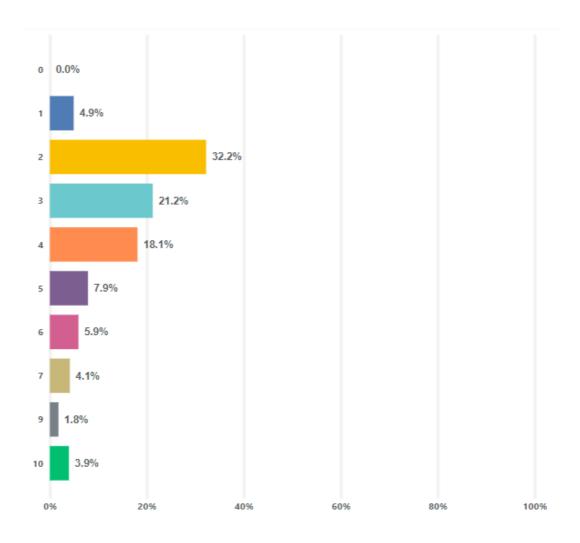

Qo. A. Are you visiting Thames-Coromandel District?

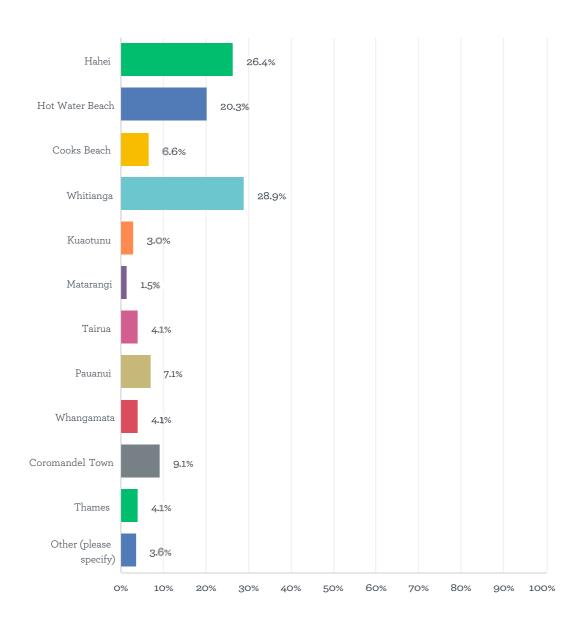

Qo. B. How many nights are you intending to stay in the Thames-Coromandel District this visit?

Answered: 194 Skipped: 16

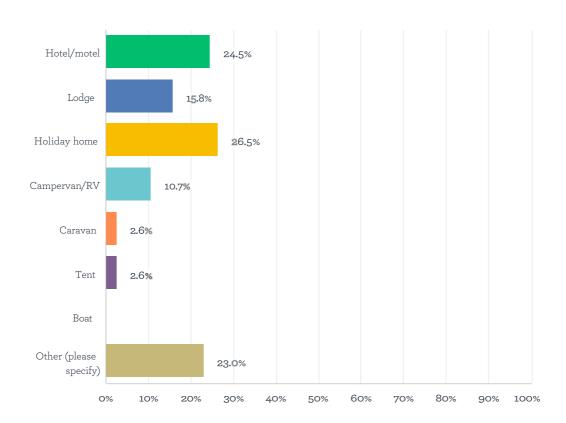

Qo. C. Where are you staying in Thames-Coromandel District?

Answered: 197 Skipped: 13

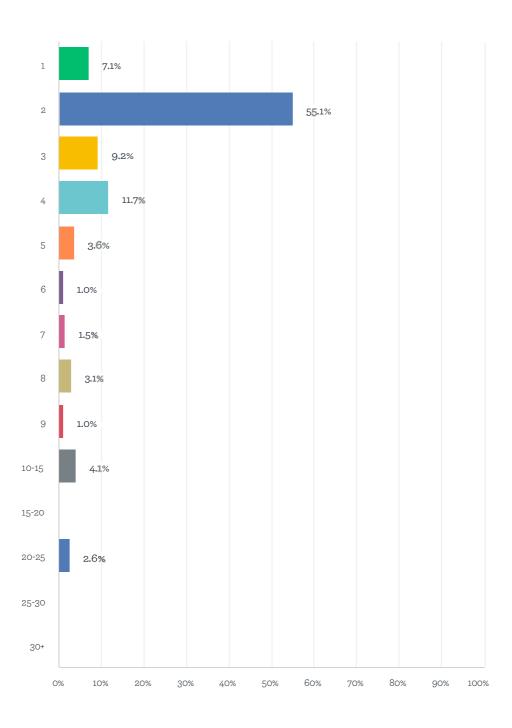

Qo. D. What type/s of accommodation are you using during your stay?
