Regulatory Services

Date: / /

Hon Tama Potaka
Minister of Conservation

Purpose – Te aronga

1. This briefing seeks decisions for the Conservation Acts (Land Management) Amendment Bill on:
 - s9(2)(f)(iv) [REDACTED]
 - s9(2)(f)(iv) [REDACTED]
 - Competitive allocation, specifically in relation to leases and licences with significant private capital investment.
2. This briefing also provides information about how Cabinet's decisions on land exchanges and disposals will interact with the current statutory requirement to reserve marginal strips for certain exchanges and disposals.

Background and context – Te horopaki

3. On 30 June 2025, Cabinet made major policy decisions in relation to the Bill (CAB-25-MIN-0213).
4. As part of these decisions, Cabinet invited you to report back on:
 - s9(2)(f)(iv) [REDACTED]
 - s9(2)(f)(iv) [REDACTED]
 - s9(2)(f)(iv) [REDACTED]
 - Whether there are any situations in which leases and licences with significant private capital investment should be contestable;
 - Upholding relevant Treaty settlement commitments; and
 - Arrangements to uphold rights under the Marine and Coastal Area (Takutai Moana) Act 2011 and the Ngā Rohē Moana o Ngā Hapū o Ngāti Porou Act 2019.
5. s9(2)(f)(iv) [REDACTED]
6. Drafting is underway on the Bill to implement Cabinet's decisions from June 2025. Cabinet decisions on the report-back topics are now needed to allow the Bill to be drafted in time for introduction this year.
7. Cabinet has also authorised you to make other policy decisions that arise during drafting.
8. In order to introduce the Bill this year, you will need to make decisions on the policy issues set out in this briefing no later than 18 August 2025. This will allow us to provide you with a draft Cabinet paper to start ministerial consultation on 25 August 2025.

s9(2)(f)(iv)

Competitive allocation

51. In June 2025, Cabinet agreed the following in relation to competitive allocation [CAB-25-MIN-0213.01 refers]:
- The concessions process would be amended to make it easier to competitively allocate new concessions among multiple operators.
 - The Minister of Conservation will have discretion to decide when to competitively allocate based on whether supply is limited; a market is likely to exist (i.e. demand would exceed supply); and the benefits of running a competitive allocation process outweigh the costs.
 - Competitive allocation cannot be triggered on the grounds of section 4 of the Conservation Act.
 - In any competitive allocation process, the criteria for choosing between multiple suitable applicants include performance; returns to conservation; offerings to visitors; benefits to the local area and recognition of Treaty rights and interests.
52. You were also directed to report back to Cabinet on whether there are any situations in which leases and licences with significant private capital investment should be contestable. This involves considering whether there are any situations in which competitive allocation for these concessions should ever be prohibited in law – or conversely, required.

We do not consider it necessary to require or prohibit competitive allocation in law as a general rule

53. Contestability raises issues for concessions involving privately-owned fixed assets and structures on conservation land. These cannot easily be removed at the end of a concession, raising practical issues if the concession could be allocated to a new operator at the end of a term. Operators may also feel they lack the certainty to plan for longer-term capital investment if contestability could regularly occur when their terms expire. Sometimes activities have no fixed end, and there is public benefit in allowing the activity to continue on, despite a lease term coming to an end.
54. We consider Cabinet's decision to rule out contestability on the basis of section 4 goes some of the way to addressing concerns from existing concessionaires about contestability of major concessions. In addition, the ability to have longer concession terms in some circumstances will allow operators to have term lengths that enable a fair return on the investment in assets, corresponding to the useful life of fixed assets they own, and providing greater certainty to invest. Nonetheless, there will be times when it is desirable for activities to continue beyond term end.

There is no strong case to require contestability for any concessions

55. Contestability is just one of several tools to achieve our objectives for use of the land, both as conservation system regulator and as a landowner.
56. Making existing operators with significant investment in fixed assets/structures compete whenever their terms end is unlikely to significantly improve conservation

outcomes and returns to conservation. While having regular change in operators or uses could encourage innovation and efficiencies, it is also likely to result in negative environmental impacts resulting from enforcing make good clauses, and issues associated with service disruption, asset valuation/transfer and compensation.

57. In this context, requiring contestability at the end of a term would devalue existing operators' investments or effectively force a sale of their assets to another business. Contestable processes do provide a market-based mechanism to drive 'highest and best use' or service improvements, but market competition factors are already strong given customers have many alternative tourism options and given the potential for market sales of businesses. DOC could also drive performance through operational arrangements, such as performance conditions in concession contracts combined with in-term monitoring and graduated responses for poor performance.
58. The value to be gained from contestability is clearer for new leases/licences rather than existing ones, particularly where the use of the land is still wide open and testing 'highest and best use' is desirable. Even then, a strict requirement to contestably allocate concessions may not be as beneficial as having clear and publicly available guidance on when contestability will be used.
59. For example, we may want flexibility to deal exclusively with an applicant in certain situations. Treasury's guidance on market-led proposals provides a useful starting point to address concerns about regulatory settings potentially stifling innovation. For example, we could indicate a preference to contestably allocate major, new tourism concessions other than in the following circumstances (when we are more likely to deal exclusively with an applicant): when the concession cannot be readily delivered by others; when the applicant owns something that limits contracting with other parties (e.g. real property, intellectual property); when the concept is new and not in the public domain. Concessionaires have also made it clear that while contestable allocation of the land may be reasonable, it would stifle innovation if their business proposals were put to market.
60. It is also unclear whether always requiring competitive allocation for some concessions (as opposed to it being discretionary) will generate the competitive benefits to outweigh the costs of running such processes. Thin markets, particularly for major concessions, mean it is not always clear how many ready and willing participants are interested in bidding on specific rights.
61. Competition is better enabled by making it easier for DOC to contestably allocate new concessions where this makes sense, and to transfer a concession from one business to another without needing to run a new concession process (which the Bill will do).

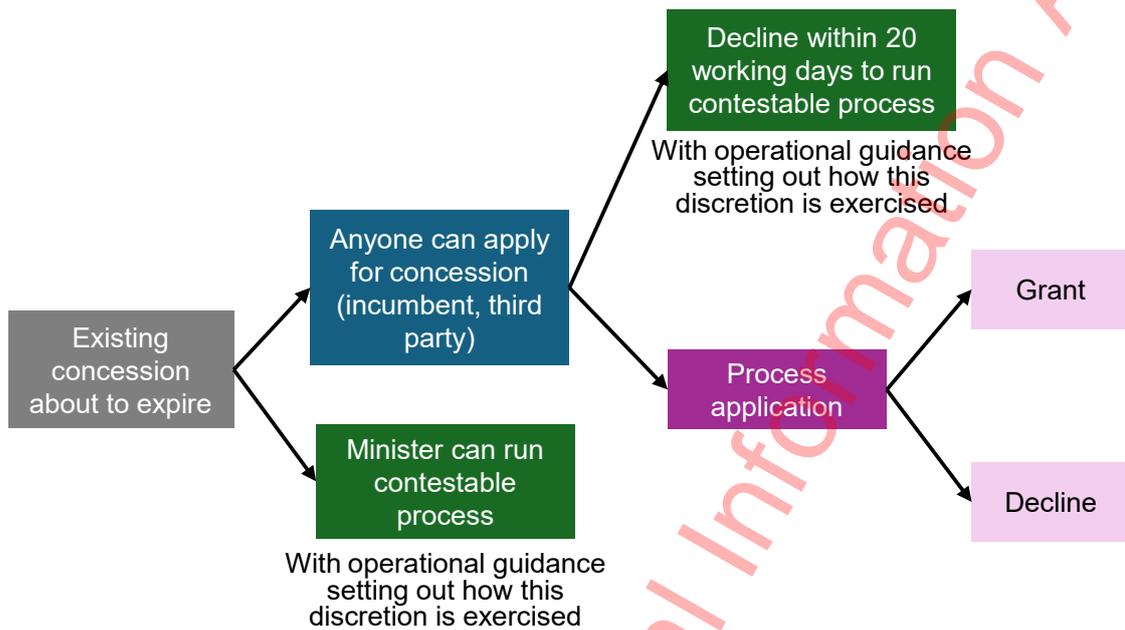

We instead recommend the following changes

62. We now consider that prohibiting the use of contestability for any concessions in all circumstances is not warranted. We instead recommend the following additional changes.

An application window for incumbents only

63. Under both the status quo and the Bill, it is possible for a third party to apply for a concession held by someone else. DOC is required to process applications in the order they are received. This would mean having to consider an application from a third party that is submitted first ahead of any 'renewal' application from an incumbent.
64. Under the status quo, once an application is received, the Minister must process it to completion and cannot easily initiate competitive allocation instead. The Bill will add the option of declining any application within 20 working days to instead run a contestable process to allocate the new concession.

65. The diagram below shows how the Bill's changes to enable competitive allocation would operate when concessions are about to expire:

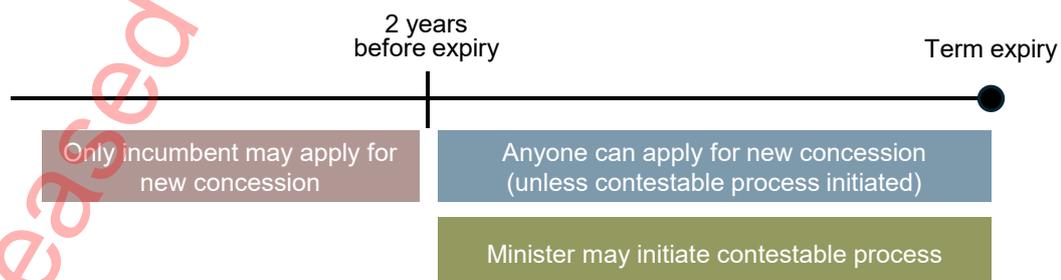

66. This could lead to situations where:

- DOC has to process applications from third parties seeking to take over a concession, even if that concession requires capital assets owned by an incumbent to operate; or
- Applications are made for concessions seeking to trigger (or encourage use of) the Minister's new ability to decline an application early and instead run a competitive allocation process.

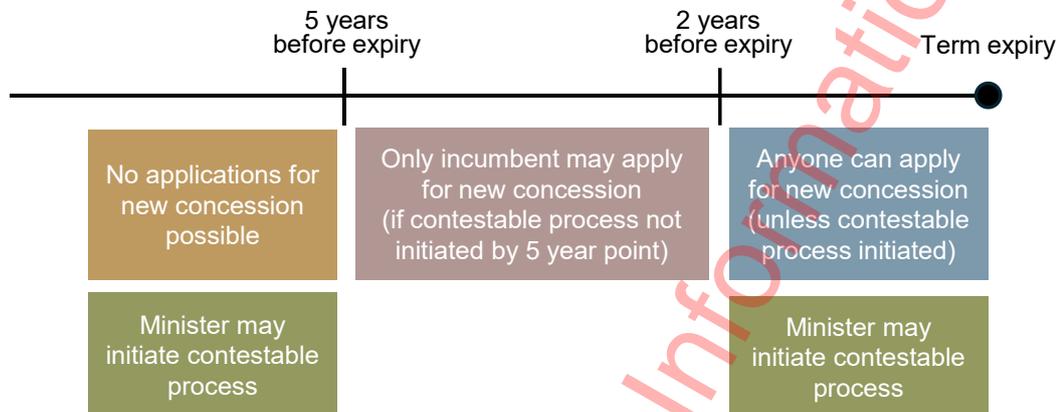

67. For most concessions, the above situations are not problematic and can be managed through operational processes. However, for major tourism concessions with significant private capital investment, we recommend only the incumbent is allowed to apply for a 'renewal' (i.e. a new concession upon expiry of the current concession) until 2 years before expiry, at which point anyone can apply.

68. We consider there are two ways to design this.

- Option 1: Until 2 years before term expiry, only the incumbent may apply for a new concession (i.e. a 'renewal' of their existing concession). It is only within 2 years of term expiry that either the Minister can initiate a contestable process, or process applications from anyone in relation to that concession. The Minister could still decline the incumbent's application, including to use the land for a different purpose.

- Option 2: If the Minister intends to run a contestable process, they must make this decision and notify the incumbent at least 5 years before the concession expires. If a decision to run a contestable process is not made and communicated to the applicant, the incumbent has a protected window between 2 and 5 years before term expiry to apply for a new concession. The Minister could still decline the incumbent's application, including to use the land for a different purpose.

69. We think either of the above options is a more proportionate approach than ruling out competitive allocation entirely for these concessions, or restricting the ability of third parties to apply for them. They give the incumbent an opportunity to have their application considered first, recognising that any application by a third party is effectively seeking to use the incumbent's fixed assets/structures for a concession.
70. Option 1 provides more certainty to incumbents – they will know if they apply for a new concession first, their application will be processed first, before any decision to run a contestable process is made. On the other hand, option 2 allows additional flexibility. The Minister may initiate a contestable process that is signalled well in advance of term expiry, but if a decision is made not to do that, the incumbent has a protected window to apply ahead of any other parties.
71. Based on the arguments against contestability for these types of major tourism concessions, we prefer option 1. However, you may choose option 2 if you wish to retain greater flexibility for the Minister in these situations.
72. We are also continuing to work on the best way to define 'major tourism concessions'.
s9(2)(f)(iv)
 [Redacted text block]

Ability to require certain terms to be included in concession documents

73. We recommend the Bill also allow specifying that concession documents (or certain categories of them) must include particular types of contractual terms. For example, this could be used to require that all major concession documents must include mandatory terms on performance conditions, step-in powers, and other end-of-term matters like asset valuation/compensation provisions.

74. This change would be in addition to the ability to specify standard terms for concessions, which has been agreed by Cabinet (and builds on an existing ability to set standard terms in the Conservation Act). It will provide more flexibility, particularly for concession documents where setting a boilerplate term would not be appropriate (e.g. what level of bond should be required for a given concession), but the Crown considers a term of that nature should be included after being negotiated between the parties.

75. s9(2)(f)(iv)
[Redacted]

Additional work on guidance and operational practice will support implementation

Competitive allocation guidance

76. To support implementation of the Bill, DOC will develop guidance for the use of competitive allocation. This guidance will incorporate the criteria agreed by Cabinet for when competitive allocation may take place and how to choose between multiple suitable applicants in a contestable process.

77. The guidance could take several forms:

- DOC operational policy or guidelines; or
- Government policy based on decisions by the Minister (recommended).

78. Competitive allocation guidance could also provide signals to the market about when the Minister is more likely to exercise their discretion to run a contestable process. For example, this could be based on whether it is a new or existing concession, whether the concession involves private ownership of fixed assets and structures on conservation land, and whether there are any circumstances that justify dealing exclusively with an applicant.

79. Subject to your decisions on this briefing and Cabinet decisions, we can work towards having this guidance ready for your approval before the Bill is passed.

s9(2)(f)(iv)

Consultation – Kōrero whakawhiti

83. We have consulted the Treasury, Ministry for Regulation and Crown Law on an incumbent-only application window.
84. The Treasury and the Ministry for Regulation's feedback was largely focussed on improving contestability in concession allocation. For example, the Treasury advised including an outer bound timeframe limit on incumbent applications in primary or secondary legislation would be their preferred option to improving contestability. We have incorporated this feedback into option 2.
85. Both also raised concerns about 'first in, first served' as the default approach. However, as a regulator, we consider that 'first in, first served' is a useful and efficient default approach to have, provided there is flexibility to decline an application and run a contestable process where appropriate (which the legislative change is intended to do).
86. s9(2)(h)

Risk assessment – Aronga tūraru

87. Responses to an incumbent-only application window for some concessions are likely to be mixed. Incumbent operators are likely to support it, whereas others wanting to enter the market by taking over existing concessions may consider this change a barrier. However, given this is limited to the largest tourism concessions involving fixed assets and structures owned by incumbent operators, we consider it reasonable to allow a protected period in which applications from the incumbent will be processed before applications from any other parties, or before initiating a contestable process.
88. There is currently ambiguity over how to deal with applications from third parties for concessions held by incumbent operators. This change would clarify the approach required to be taken.

Legal implications – Te hiraunga a ture

89. Earlier this year, we advised that it would be possible to rule out contestability in law for some major concessions. s9(2)(h)

Marginal strips

90. Cabinet agreed categories of land to be excluded from new, more flexible land exchange and disposal settings [CAB-25-MIN-0213.01]. This decision means conservation land considered to be of higher value will be excluded from exchange

and disposal. However, no decisions were made on the relationship between these new settings and marginal strips.

91. Marginal strips are land parcels, generally 20 metres wide, that adjoin some parts of a foreshore, lake, river or stream. They have very particular values and importance to the public. They:
- Protect water quality through riparian buffers;
 - Maintain biodiversity corridors across the landscape;
 - Provide public access to rivers, lakes, and coastlines including for game bird hunters and anglers to rivers and lakes; and
 - Are subject to public and private riparian management programmes (e.g. fencing, planting, erosion control), which are often co-funded by government with rural communities and catchment groups.

Marginal strip settings should continue as they currently operate

92. Marginal strips have separate specific provisions in the Conservation Act to reflect these values, which set them apart from the way other conservation land is treated. Currently marginal strips of a certain width must be reserved (i.e. retained as conservation land or made into conservation land) where Crown land adjacent to foreshore, a lake, a river or stream is exchanged or disposed of. The function of this is to reserve the water margin.
93. These provisions are only triggered when exchanges and disposals take place that involve land adjoining rivers, lakes and coastal areas. Even with Cabinet's decisions to facilitate more exchanges and disposals, marginal strip reservation is unlikely to be a matter that arises frequently.
94. The Minister of Conservation can exempt disposals from the requirement to reserve marginal strips, but the test for doing so has a high bar.⁵ This means the exemption is rarely used in practice.⁶
95. Once established, marginal strips cannot be disposed of. Marginal strips can only be exchanged on a like-for-like basis (i.e. for other land that would act as or provide marginal strips).
96. These settings should continue to apply alongside Cabinet's decisions on exchanges and disposals without issue. This reflects the unique role marginal strips play for hunters, fishers and the public more generally, as well as the investment made by public and private entities to protect water quality.
97. Maintaining these settings does not necessarily mean that marginal strips will always have to be reserved. The exemption allows for disposals without reserving marginal strips in limited circumstances.

⁵ Section 24B of the Conservation Act provides for the Minister of Conservation to declare certain disposals be exempt from the marginal strip requirement only if satisfied—

- (a) that the land has little or no value in terms of the purposes specified in section 24C; or
- (b) that any value the land has in those terms can be protected effectively by another means.

⁶ The Fast-track Approvals Act 2024 allows for projects of regional and national significance to exchange conservation land without the requirement to reserve a marginal strip. Disposals are not possible under the Fast-track Approvals Act.

Consultation – Kōrero whakawhiti

98. The Ministry for Primary Industries and Ministry for the Environment support the status quo.

Risk assessment – Aronga tūraru

99. Any changes to marginal strips are likely to be highly contentious as they impact the “Queen’s chain”. Removing or disposing of marginal strips in particular is likely to cause a strong reaction from the public, the Outdoor Access Commission, fishers, as well businesses, and other central and local government agencies that have invested in riparian protection over the years.

Next steps – Ngā tāwhaitanga

100. In order to introduce the Bill this year, you will need to make decisions on the policy issues set out in this briefing by 18 August 2025.
101. We are working to the dates below for remaining Cabinet decisions and Bill introduction this year:

Week beginning 18 August	Draft Cabinet paper provided so ministerial consultation can start the following week.
<i>22 August</i>	NCPS targeted consultation concludes.
<i>25 August – 2 September</i>	Ministerial consultation on draft Cabinet paper. Agency consultation will be concurrent.
<i>3 September</i>	Finalise Cabinet paper based on feedback received during ministerial and agency consultation.
<i>4 September</i>	Lodge Cabinet paper covering Bill report-back issues, NCPS and upholding Treaty settlements.
<i>10 September</i>	Cabinet paper discussed at ECO.
<i>15 September</i>	ECO decisions confirmed. As soon as possible after this, drafting instructions for the remainder of the Bill will be issued to Parliamentary Counsel Office (PCO). All remaining dates are subject to the time taken for PCO to complete drafting.
<i>October</i>	Final policy decisions and Cabinet approvals for a parliamentary paper on the NCPS to be referred to select committee alongside the Bill.
<i>October – December</i>	Bill completed and approved for introduction. Your office is looking into whether there is House time for the Bill in the December sitting block. If this is confirmed, we would aim for LEG on 4 December and Cabinet on 8 December for approval to introduce the Bill. Introduction, first reading and referral to select committee would then take place in the December sitting block.

ENDS

Attachment A: Concession decisions – Legislative requirements and interactions

Released under the Official Information Act

Attachment A: Concession decisions – legislative requirements and interactions

Legislative requirements under the Conservation Act 1987 (CA)

Section 2 - Definition of conservation - Preservation and protection of natural and historic resources for the purpose of maintaining their intrinsic values, providing for their appreciation and recreational enjoyment by the public, and safeguarding the options of future generations.

Section 4 - CA shall so be interpreted and administered as to give effect to the principles of the Treaty of Waitangi. This also applies to Schedule 1 legislation.

Section 6 - Functions of Department - Primary purpose of managing land and natural and historic resources is for conservation (as defined in s 2). Recreation use is to be fostered, and then tourism use is allowed – but only where not inconsistent with conservation.

⊗ Part 3A - Management planning

Section 17A - DOC must administer and manage all conservation areas and natural and historic resources in accordance with general policies, CMSs, CMPs.

Section 17B - The purpose of general policies is to implement the Act. General policies must not derogate from any Act.

Section 17D - The purpose of a CMS is to implement general policies and establish objectives for the integrated management of natural and historic species. CMSs cannot derogate from the provisions of any Act or general policy.

Section 17E - The purpose of a CMP is to implement CMSs and establish detailed objectives for the integrated management of natural and historic resources. CMPs cannot derogate from provisions of any Act, general policy or CMSs.

Primary clauses outlining requirements for concession decisions

⊗ Part 3B - Concessions

Section 17SB - The Minister may decline a concession application that is obviously inconsistent with provisions of CA, CMSs, CMPs etc.

Section 17U - List of matters the Minister must consider. Applications may be declined if effects cannot be avoided, remedied or mitigated. Concessions for structures cannot be granted if they could reasonably be built off conservation land, or on other conservation land with significantly less adverse effects. Concessions cannot be granted if contrary to CA provisions or the purposes for which land is held.

Section 17W - Concessions must be consistent with CMSs and CMPs.

Land classifications outline the purpose for which land is being protected and preserved. They further protect specific values and prioritise how the area is managed. They are selected based on the Act the land is held under.

Additional legislative requirements when considering concessions in national parks, reserves and wildlife areas

National Parks Act 1980 (NPA)

Section 4 - List of principles to be applied in all national parks e.g. parks to be maintained in natural state, and public to have right of entry.

⊗ **Section 15** - The Minister can set apart (amenities) areas in a park for the development and operation of recreational and public amenities. This must be on the recommendation of the NZCA and aligned with the NPMP. S 4 above applies only so far as the principles are compatible with the development and operation of amenities and services.

⊗ **Section 43** - DOC must administer national parks in accordance with the NPA, General Policy for National Parks, CMSs and NPMPs.

⊗ **Section 44** - General Policy for National Parks implements NPA. General policy must not derogate from any Act.

⊗ **Section 44A** - NPMPs cannot derogate from CMSs.

Section 49 - Concessions in national parks are granted under Part 3B of CA. Other NPA clauses (e.g. s 4) also apply to those decisions.

⊗ **Section 51A(2)** - The Minister must not authorise anything in a national park that is inconsistent with the relevant NPMP.

Reserves Act 1977 (RA)

Section 3 - The main functions of the RA are:

- To provide for the preservation and management, for the benefit and enjoyment of the public, areas possessing some special feature or values (recreational use, wildlife, landscape amenity or scenic value).
- To ensure the preservation of representative natural ecosystems or landscapes and the survival of indigenous species.
- To ensure the preservation of access for the public to the coastline, islands, lakeshore and riverbanks and to encourage the protection and preservation of the natural character of these areas.

⊗ **Section 15A** - Conservation General Policy applies to reserves. General policy must not derogate from any Act.

Sections 17-21 - Additional provisions for recreation, scenic, nature and scientific reserves which must be interpreted in line with s 3 above.

Section 59A - Concessions on reserves administered by the Crown are granted under Part 3B of CA. Other RA clauses (e.g. s 3, relevant provisions for the type of reserve) also apply to those decisions.

⊗ **Section 40A** - CMSs must not derogate from RA.

⊗ **Section 40B** - CMPs for reserves managed by DOC must not derogate from RA or any other Act, general policy or CMSs.

Concessions regime only applies to DOC-administered reserves. **For non-DOC administered reserves** the administering body provides approvals in place of DOC granting a concession.

Wildlife Act 1953 (WA)

Sections 9, 14, 14A - State the purposes of wildlife sanctuaries, wildlife refuges and wildlife management reserves.

⊗ **Section 14AA** - Concessions in wildlife sanctuaries, wildlife refuges, and wildlife management reserves are granted under Part 3B of CA. Other WA clauses (e.g. s 9, 14, 14A, 14B and 14C) also apply to those decisions.

Section 14B - DOC must manage wildlife sanctuaries, wildlife refuges and wildlife management reserves in accordance with general policy, and relevant CMSs and CMPs.

Section 14C - Conservation General Policy applies. General policy must not derogate from any Act.

Key

⊗ Impacted by changes to new National Conservation Policy Statement, concession processes, management planning and amenities areas
