Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section	<i>General Comments Subsection: None</i>			
Submitter No. 4	<p>Talleys Group Limited</p> <p><i>Oppose</i></p> <p>The development of the plan has been concurrent with the development of recommendations for areas and tools for marine protected areas in the territorial sea of the Antipodes, Bounties and Campbell Islands. In January 2011 the Ministers of Fisheries and Conservation announced their decision to create marine reserves around these islands (or parts there of) by special legislation. As marine reserves there will be restrictions on discharges, structures and introduced organisms which may make a number of provisions of the plan redundant and may require a review of the proposed plan.</p>	<p>Defer completion of the proposed plan until the special legislation creating the new marine reserves is complete.</p>	<p>The creation of new marine reserves is considered to be complementary to the proposed regional coastal plan rather than duplication. The provisions of the regional coastal plan will apply in addition to any protection mechanisms either already in place (i.e. the marine reserve and marine mammal sanctuary already in place around the Auckland Islands) or as developed as a result of the Marine Protected Area Policy. Separate consents to undertake various activities would be required under the MRA. So while the proposed plan has some permitted activity rules for structures, a separate consent for such structures is required under the MRA. The decision under the MRA needs to reflect the purpose of that Act, not the RMA. The purpose of the proposed regional coastal plan is to assist the Minister of Conservation to achieve the purpose of the RMA in relation to the coastal marine area of the islands, which is to promote sustainable management of natural and physical resources, as articulated in section 5(2) RMA. Whereas the purpose of the Marine Reserves Act 1971 is to preserve the reserves in their natural state as the habitat of marine life for scientific study. Until the new marine reserves have actually been established we cannot second guess what the final outcome will be - not withstanding that it is clear from the Ministers' press release that the new marine reserves will not cover all of the territorial sea of all of the islands. The intention is to establish a full reserve around Antipodes Island only. Bounty and Campbell islands reserves will comprise 58% and 39% of their territorial seas, and the Snares Islands are not a part of the biogeographic region and will have no marine reserve around them.</p>	<p><i>Reject</i></p> <p>Refer to the officer's reasons which are adopted.</p>

	<i>Oppose</i> There is an urgent need to provide better protection for the ecosystems surrounding the Subantarctic Islands, beyond that currently provided. Because of this NZMSS do not support a recommendation for deferral of the plan. If amendments are later required these can be by way of plan change or variation (depending on the status of the proposed plan at the time).		The creation of new marine reserves is considered to be complementary to the proposed regional coastal plan rather than duplication. The provisions of the regional coastal plan will apply in addition to any protection mechanisms either already in place (i.e. the marine reserve and marine mammal sanctuary already in place around the Auckland Islands) or as developed as a result of the Marine Protected Area Policy.	<i>Accept</i> Refer to the officer's reasons which are adopted.

Submitter No. 7 DeepWater Group Limited

The Deepwater Group supports the submission by the Seafood Industry Council. Particularly regarding the constraints caused by the carriage of heavy fuel oil.

Refer to the decisions and reasons given in response to Sanford's submissions policy 13 and rules 47 and 48.

Submitter No. 12 Heritage Expeditions Limited

Some parts of the plan and the section 32 report refer to terrestrial management focused activities i.e. cultural sites that are land based, eradication programmes for terrestrial species, but the connection to the management of the marine environment is not made. Are these examples used as proxies? If yes then the plan should be explicit. The focus of the plan is on the coastal marine area and if there is a lack of information to inform management this should be clearly stated.

As noted throughout the proposed plan and section 32 report there is a close interconnectedness between the land and sea of both island groups, a number of species use both the land and the marine environments. A number of sites of cultural and historic heritage will either be close to or straddle the MHWS boundary of the coastal marine area. Eradication programmes on the land can impact both environments, both in terms of positive effects on species and potential for adverse effects such as accidental discharges. The section 32 report notes that eradication programmes on land, although expensive, are possible, they are even more expensive and have had limited success in the marine environment. Hence the focus of the proposed plan is on prevention of marine biosecurity breaches rather than eradication.

Submitter No. 12	Heritage Expeditions Limited			<i>Reject</i>
	There is no provision for review of the plan.	Add a review provision that this plan be reviewed in five years.	Section 79 RMA sets out the requirements for review of a regional coastal plan. It is not a requirement to include such provisions in the plan. Not including them does not preclude either the Minister undertaking a review at any time, or any individual seeking a private plan change.	Refer to the officer's reasons which are adopted.
Submitter No. 14	Te Ohu Kai Moana			
	Have reservations about the potential negative impact that a number of the proposed rules and activity definitions may have on fisheries Treaty settlement assets and interests. Support the detailed submissions of the Seafood Industry Council and Deepwater Group. Note concern in relation to proposed rules affecting fuel types and associated activities and hull fouling and how these rules might affect the free passage of fishing vessels through the Territorial Sea of these islands.		Refer the submissions of the New Zealand Seafood Industry Council and Deepwater Group, and also Talley Limited and Sanford Limited	
Submitter No. 16	University of Otago			
	<i>Neutral</i> Ensure the ability to undertake appropriate scientific means to undertake the science - appropriate sampling (including acoustic and bottom sampling) with the opportunity for informed discussion around potential impacts rather than decision based on historical hearsay rather than clear understanding of modern methods, techniques and approaches.		The provisions of the proposed plan seek to recognise the value of research and facilitate it to the extent practical within limits of acceptable risk of potential adverse effects.

	Otago University note that science should be better integrated into the management of the Sub Antarctic and its application for monitoring effectiveness of management systems.	Ongoing monitoring should be undertaken, providing a measurement baseline for sound ongoing management. Recommendation: Specific statement about monitoring of the RCP areas is required and if no monitoring is undertaken an explicit statement to this effect is required.	Refer "Monitoring efficiency and effectiveness" on page 55 of the proposed plan. The plan notes that monitoring the efficiency and effectiveness of it is a requirement of section 35 of the RMA. Other than assuring users of the coastal marine area that the information collected during hull inspections will be used to monitor efficiency and effectiveness, the detail of how the Minister will give effect to the requirement to monitor efficiency and effectiveness will be determined outside the plan. This gives flexibility to amend a monitoring programme, if needed, without having to undertake a plan change.	<i>Accept in part</i> Refer to the decision, reasons and changes in response to the submission from Heritage Expeditions 'Current use values - Scientific research in the Subantarctic Islands'.

Submitter No. 16	University of Otago			
	<i>Neutral</i> Ensure it is possible to undertake research year-		It is possible to undertake activities all year round. There is a restriction on access to Port Ross during the winter	

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
	<p>round as the natural systems and ecosystems do not necessarily lend themselves to study during the summer only, and ensure that research can be conducted from a range of vessels appropriate to the tasks (why the 25 m vessel limit? Why not the limit based on the task and impact?).</p>		<p>months to allow a case by case consideration of proposed activities while the southern right whale are in Port Ross in large numbers breeding and nursing. The risk of oil spill and/or biosecurity breach are key issues for the proposed plan. The rules and maps creating zones of access based on vessel length seek to reduce the risk of oil spill and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy. The zone inside 300m of MHWS, as the closest to shore, is the zone of highest risk. The 300m was selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous variables that would contribute to a vessels risk assessment. The explanatory text preceding the policies on the control of surface water activities should explain the rationale for the vessel length and zones established in the rules and maps, and acknowledge that vessel length is used as a proxy for the numerous variables that influence risk. The following paragraph should be included as the sixth paragraph under the title "Control of surface water activities" :</p> <p>"The control of surface water activities is based on zones of access relative to vessel length. Vessel length is used as a proxy for numerous factors that can influence risk of oil spill and/or biosecurity breach, such as: vessel length; propulsion system; number, type and location of propellers; number, type and position of rudders; presence and power of bow and/or stern thrusters; windage of the vessel relative to its power; age of vessel; fuel type, duration of access etc. The zone inside 300m from MHWS, as the closest to shore, is the zone of highest risk. The 300m is selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous variables noted above that would contribute to a vessels risk assessment. The degree of risk is further exacerbated by the remoteness of the islands and the environmental conditions that would hamper any response efforts."</p> <p>The alternative to the current vessel length and zones of access matrix, to make it simpler, is to remove the vessel lengths and multiple zones, and require all access inside 600m from MHWS other than ancillary craft to obtain a discretionary coastal permit. This will allow case by case assessment of all the variables that could influence risk, as noted above.</p>

Submitter No. 16 University of Otago

Neutral

We also seek relief on payment for access. Our research is conducted using public good funds and already conducted in an economical manner. Paying for access to the environment would limit the scope of our programme and may well end up with the government paying twice for the conservation and management programme.

The proposed plan currently says it will rely on developing regulations under the RMA in order to charge administrative charges such as cost recovery for consent processing. This is an involved process. The Minister of Conservation has submitted that the Conservation Act be used for administrative charges, on the basis that it is simpler, and allows better alignment with RMA charges as imposed by local authorities using section 36 of the RMA and the provisions of the Local Government Act 2002. Similar to the RMA there are options for waivers on charges.

Submitter No. 11 Te Runanga Nui o Te Aupouri Trust

Timing of notification of the proposed plan

Te Aupouri are currently in negotiations with the Crown in relation to the settlement of their historical Treaty claims. Part of these negotiations include negotiations with the Department of Conservation in relation to the management of public conservation lands in the Te Aupouri area of interest. Te Aupouri consider that it was premature for the Department to notify it's Proposed Regional Coastal Plan prior to the conclusion of these negotiations.

The Treaty settlement process and the development of the proposed regional coastal plan are separate processes. There would be significant cost to the Department in delaying notification of the Kermadec Islands section of the proposed plan. Delaying notification of the plan would also delay the effect of objectives, policies and other provisions which will better manage this unique environment.

Reject

Refer to the officer's reasons which are adopted.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section <i>Values of the Subantarctic Islands Subsection: None</i>				
Submitter No. 13	<p data-bbox="341 262 750 289">New Zealand Marine Sciences Society</p> <p data-bbox="516 304 676 331"><i>Oppose in Part</i></p> <p data-bbox="516 338 1003 478">There is no mention of the recent announcement by the Ministers of Fisheries and Conservation that marine reserves are to be established around the Bounty, Antipodes and Campbell Islands.</p>	<p data-bbox="1026 304 1507 386">Include a statement that recognises there will be marine reserves at the Bounty, Antipodes and Campbell Islands in the future.</p>	<p data-bbox="1590 304 2160 1787">Include a footnote in the text of the second paragraph on page 13 as follows: "Note the Marine Protected Area Forum for the Southern Ocean has resulted in a decision by Ministers to create more marine reserves around Bounty, Campbell and Antipodes Islands and further fisheries restrictions. Refer the Integrated management section of the plan for further details" Include a further section in the Integrated management section of the proposed plan: in the bullet point list in the first paragraph include a further bullet point "DOC's role under the Marine Reserves Act 1971 and the Marine Protected Area Policy"; and include a new section titled "Marine reserves and the Marine Protected Area Forum for the Southern Ocean" with the following text: "The Marine Protected Areas Policy Statement and Implementation Plan commit the New Zealand government to protecting representative samples of the full range of marine habitats and ecosystems as part of a wider strategy to conserve New Zealand's biodiversity. The MPA Policy Statement sets out a series of high-level principles that will guide planning and prioritising the MPA network at the national level and the selection of possible MPA sites and management tools. There is a range of management tools that could potentially contribute to the MPA network, including marine reserves, Fisheries Act tools, Resource Management Act measures and other tools. On 29 January 2011 Minister of Conservation Kate Wilkinson and Fisheries Minister Phil Heatley announced three huge marine reserves totalling 435,163ha are to be established in the Subantarctic Islands. The Ministers' decisions will see a marine reserve cover the entire territorial sea - out to 12 nautical miles - surrounding Antipodes Island, with two further marine reserves around the Bounty Islands and Campbell Island, covering 58 percent and 39 percent of those islands' territorial seas respectively. New prohibitions on Danish seining will be introduced in the remaining territorial sea around the island groups, ensuring the entire area – 688,548ha - achieves Marine Protected Area status. The new marine reserves are to be established by special legislation. The intended boundaries of the reserves allows for the continuation of long-lining for ling in some areas around the Bounty Islands, as this method is targeted and has a limited by-catch. And there will also be a five-year window to allow for a potential deep-water crab fishery to be explored in the territorial sea beyond the marine reserve around Campbell Island. At the end of that period, it will be decided whether a crab fishery can be established or whether the entire territorial sea should become a marine reserve."</p> <p data-bbox="1590 1818 2160 1902">All of the Kermadec Islands and the Auckland Islands are already full marine reserves to the outer limits of their territorial seas.</p>	<p data-bbox="2172 262 2318 289"><i>Accept in part</i></p> <p data-bbox="2172 304 2665 415">Refer to the reasons and the decision on the submission from Forest and Bird on 'Current use values - Fishing in the Subantarctic Islands, page 13, second paragraph'.</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section <i>Current use values - Tourism in the Subantarctic Islands Subsection: None</i>				
Submitter No. 12	Heritage Expeditions Limited	<p>Revise the tourism text on page 12. Re-write paragraph 2 as follows: "There has always been sustained tourism by 1 highly niched operator over the last 25 years. The remoteness of these rugged windswept islands , set amongst some of the wildest oceans in the world , combined with superb wildlife opportunities make these islands key attractions for ecotourists or tourists seeking remote destinations with a focus on nature tourism. However, the wild oceans, remoteness and associated operational requirements have made it too challenging for new entrants to establish. There has been some market testing through occasional nature based cruises but this has not been sustained over time. It remains difficult to predict sustained growth in the current economic climate and for the next 5 years and is most likely to be minimal.</p>	<p>The suggested relief sought is considered a little too subjectively focused on the operations of their own company and does not mention the large cruise ships. It is recommended to replace the current second paragraph of the "Tourism" section on page 12 of the proposed plan with the following two paragraphs "The Department believes there has been a growth in tourism interest in the Subantarctic Islands over the last five years, compared to the previous twenty years. This is from both small scale ecotourist operators (mostly small to medium sized vessels carrying up to 150 passengers) and the large cruise ships carrying 2000 plus passengers. Cruise New Zealand (representative of 95% of cruise ships visiting NZ) generally deters the large cruise ships from attempting to go too close or visit the southern Islands, and instead suggest they steam offshore of the Snares Islands on dawn or dusk to watch the titi (sooty shear water) leaving or returning from food foraging in their millions, and then to carry on to other mainland destinations.</p> <p>The remoteness of these rugged windswept islands, set amongst some of the wildest oceans in the world, combined with superb wildlife viewing opportunities make these islands key attractions for eco-tourists or tourists seeking remote destinations with a focus on nature tourism. However, the wild oceans, remoteness and associated operational requirements make the islands a challenging environment to visit. As noted above, subantarctic tourism, offering an ecotourism experience, has mostly been limited to small to medium sized vessels carrying up to 150 passengers to date. The current trend for visits from the smaller ecotourist operators seems to be in decline. This could be for a variety of reasons, such as world economic conditions or changes to the requirements to be met by ships as required by international maritime regulations. There has however, been sustained tourism by one ecotourist operator over the last 25 years."</p>	<p><i>Accept in part</i></p> <p>Refer to the officer's reasons which are adopted.</p> <p>Changes required: Replace the current second paragraph of the "Tourism" section on page 12 of the proposed plan with the following two paragraphs:</p> <p>"The Department believes there has been a growth in tourism interest in the Subantarctic Islands over the last five years, compared to the previous twenty years. Plan Section	<i>Current use values - Fishing in the Subantarctic Islands Subsection: Fishing</i>			
Submitter No. 6	Sanford Limited			<i>Accept in part</i>
Fishing	<i>Oppose</i> Page 13, paragraph 5, in relation seeking shelter: There is a history of larger fishing vessels taking shelter throughout the coastal regions of both the Sub Antarctic and Kermadec Islands in times of severe weather systems.	Amend sentence so that it reads, 'there is a history of fishing vessels of all sizes up to 105m seeking shelter near the coast of many of these islands in severe weather systems', then end paragraph.	Amend the last sentence of the fifth paragraph (page 13) to read "there is a history of scampi vessels regularly coming close into shore in the territorial sea of the Auckland Island and fishing vessels of all sizes up to 105m seeking shelter near the coast of many of these islands in severe weather systems."	Change required: Amend the last sentence of the fifth paragraph on page 13 to read "There is a history of scampi vessels regularly coming close into shore in the territorial sea of the Auckland Island and fishing vessels of all sizes up to 105m seeking shelter near the coast of many of these islands in severe weather systems."
Submitter No. 6	Sanford Limited			<i>Accept</i>
Fishing	<i>Oppose</i> Paragraph 5, regarding vessel size: While fishing vessels tend to be 25m to 35m range, one of the Sanford vessels presently targeting scampi is 42m. In the past Sanford factory trawlers, which are 64m in length, have also targeted scampi.	Amend sentence so that it reads, 'Currently these vessels tend to be less than 45 meters in length - smaller than most commercial fishing vessels in the southern ocean'.	Page 13, fifth paragraph, 3rd sentence to read: "These vessels tend to be less than 45 metres in length - smaller than most other commercial vessels in the southern ocean."	Change required: In the third sentence of the fifth paragraph on page 13 change "25" to "45".
Submitter No. 6	Sanford Limited			<i>Accept in part</i>
Fishing	<i>Oppose</i> Bottom longlining around the Bounties can occur at any time, but from Sanford's perspective is most likely to happen between February and August each year (3rd paragraph, page13).	Amend paragraph so that it reads, 'Deep sea bottom longline fishing for ling can occur at any time of the year but is most likely to happen between the months of February to August', then end paragraph.	Amend 3rd sentence of 3rd paragraph, page13, so that it reads: "Deep sea bottom longline fishing for ling can occur at any time of the year but is most likely to happen between the months of February to August, around the Snares Islands/Tini Heke and Bounty Islands."	Change required: Add the words "can occur at any time of the year but is most likely to happen" after the words "fishing for ling," in the third sentence of the third paragraph on page 13.
Submitter No. 6	Sanford Limited			<i>Accept in part</i>
Fishing	<i>Oppose</i> The text around fishing needs to be expanded to include both present fishing practices and future potential such as toothfish. The first bullet is incorrect - trawlers, not all vessels are prohibited from fishing in the territorial sea. The third paragraph should acknowledge that the deepwater crab fishery is under the quota management system.	Expand the text to include future fisheries' opportunities and the economic value of the fishery, amend the first bullet point from vessels to trawlers and amend the text to in the last sentence of the third paragraph so that it reads: 'A deep sea crab fishery is under development for which quota has been allocated'.	It is not appropriate for an RMA coastal plan to second guess or promote the potential of future fisheries. The proposed plan does not prevent the development of future fisheries, but manages potential adverse effects of all activities in the coastal marine area of the islands in accordance with section 5 RMA. The first bullet (page 13) should be corrected to refer to trawlers as opposed to all vessels. The third paragraph (page 13) should acknowledge that the deepwater crab fishery is under the quota management system.	Changes required: Delete the words "vessels" and replace with the word "trawlers" in the first bullet (page 13). In the fourth paragraph on page 13 delete the text "to develop; however, it is largely experimental at this stage" and replace with the following text "off Campbell Island, with quota allocated under the quota management system (QMS)."
Submitter No. 12	Heritage Expeditions Limited			<i>Accept</i>
	<i>Oppose in Part</i> The analysis provides general context but does not include the dynamics of the fishing fleets that may seek shelter within the territorial sea. It does not provide enough detail on the sheltering practices of the fishing fleets -	Expand paragraph 5 to include the extent that scampi boats shelter by adding for the duration of rough weather, which in winter can be up to 3 to 4 weeks at a time.	Amend paragraph 5 by adding after the words "for shelter" the following words "usually for the duration of rough weather, which in winter can be up to 3 to 4 weeks at a time."	Changes required: Amend paragraph 5 by inserting the words "usually for the duration of rough weather, which in winter can be up to 3 to 4 weeks at a time," after the words "for shelter".

Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
	<p><i>Support</i></p> <p>The Heritage Expeditions submission comments that there is a need to include the dynamics of the fishing fleets that may seek shelter in the territorial sea and focuses on the behaviour of the scampi fishery off the Auckland Islands. It makes a recommendation to expand paragraph 5 on page 13. SeaFIC agrees that the plan has failed to recognise the extent to which fishing vessels use the coastal region for sheltering from adverse weather conditions. The Deepwater Group submission refers to the regular consistent and without incident use of the Subantarctic territorial seas by large trawlers for as long as fishing has occurred in the region. These vessels are in addition to the scampi vessels. We believe the plan should include explicit recognition of the use for shelter by all vessels.</p>		<p>In response to the submission by Heritage Expeditions, it is recommended to amend paragraph 5 by adding after the words "for shelter" the following words "usually for the duration of rough weather, which in winter can be up to 3 to 4 weeks at a time." It is recommended to further amend paragraph 5 by adding a further sentence as follows: "Large vessels also use the territorial sea of the islands for shelter, and from time to time, and for transiting through to shift to other fishing grounds."</p>	<p><i>Accept in part</i></p> <p>The further amendment is not necessary. Refer to the decision, reasons and changes in response to the submission from Sanford on 'Current use values - Fishing in the Subantarctic Islands'.</p>

Submitter No. 8 Royal Forest and Bird Protection Society of New Zealand Incorporated

Page 13, paragraph 3

Support in Part

The ling fishery around Bounty Islands is discussed. This fishery is not extensive. On average each year only 20 lines are set. The proposed plan does not advise the reader of this.

Include the following two sentences after the first sentence of paragraph 3 under title "Fishing" (page 13): "This fishery is not extensive. On average each year only 20 lines are set."

The ling fishery around the Bounty Islands is part of New Zealand's quota management system, LIN6. The extent of this fishery and how the fishing industry chooses to fish this quota are not issues for an RMA coastal plan. The coastal plan can only manage the effects of fishing on the environment, not the activity itself.

Reject

Refer to the officer's reasons which are adopted.

Plan Section <i>Cetaceans in the Kermadec region Subsection: None</i>				
Submitter No. 8	Royal Forest and Bird Protection Society of New Zealand Incorporated			
	<p><i>Support in Part</i></p> <p>The section on Cetaceans in the Kermadec region does not recognise the work that has been undertaken recently, such as humpback whales surveys by staff on Raoul Island over the last three years. Also refer to "The Kermadec Islands and the endangered humpback whales of Oceania" by Rochelle Constantine, Claire Garrigue and Karen Baird in "Deep talks and thoughts celebrating diversity in New Zealand's untouched Kermadecs" which refers to the surveys and puts the significance of the whales in context.</p>	<p>Add more detail about the population size of humpback whales found at the Kermadecs and their regional significance.</p>	<p>Updated references noted in the submission will be obtained and the section on cetaceans in the Kermadec region will be updated accordingly.</p>	<p><i>Accept</i></p> <p>Replace the text after the title "Cetaceans in the Kermadec region" with the following text:</p> <p>"Seven cetacean species (bottlenose dolphin, killer whale and five great whales) have been recorded from the Kermadec Islands. Of these the blue whale (<i>Balaenoptera musculus</i>) is only known from a single stranded specimen. A further 28 species may be present based upon extrapolation from their known ranges.</p> <p>Very little scientific research has been conducted on the cetaceans inhabiting the Kermadec archipelago however a considerable amount of information on commercially hunted species is contained in American whaling log books and journals (Richards 2010). The Kermadec Islands and surrounding waters were one of three main locations for hunting sperm whales (<i>Physeter macrocephalus</i>) in the New Zealand region, beginning in 1792 and continuing into the 1880s. Sperm whales are thought to aggregate in the region to feed on squid and although present throughout the year whaling data indicate they are most abundant from January to May, with numbers peaking in May as individuals and groups migrate through the region to tropical waters further north (Richards 2010).</p> <p>Although whaling vessels took very few humpback whales (<i>Megaptera novaeangliae</i>) around the Kermadec Islands, the region is an important migratory corridor for the endangered Oceania subpopulation (Constantine et al. 2010; Garrigue et al. 2010). These whales feed in Antarctic areas V and VI and migrate south through the Kermadec archipelago from September to November (Chilton 1911; Morton 1957; Gaskin 1968; 1973; Constantine et al. 2010). DOC staff counted 112 humpback whales (3.2% of the estimated Oceania population) in the coastal waters of Raoul Island on one day during the peak of the migration in October 2009 (Constantine et al. 2010). While satellite tagging has shown that some New Caledonian humpback whales migrate through the Kermadecs it is not known where the bulk of them come from, however it is likely they include whales originating from Fiji, Tonga, Niue and French Polynesia (Garrigue et al. 2002, 2010; Constantine et al. 2010). Humpback whales probably do not feed in the waters around the Kermadec Islands but cows and calves have been observed lingering in Denham Bay, Raoul Island, suggesting the islands may function as a relatively sheltered stop-over allowing cows with dependent</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
				<p>calves to rest before continuing on to Antarctica.</p> <p>The only resident or semi-resident species in the waters surrounding the islands is a small form of bottlenose dolphin (<i>Tursiops cf. truncatus</i>). The relatively small size of the Kermadec dolphins is unusual for bottlenose dolphins inhabiting oceanic habitats and suggests they may be genetically distinct. They probably feed on a variety of small benthic and pelagic fishes and squids. Anecdotal observations of staff stationed on Raoul Island suggest a seasonal habitat shift, possibly to offshore waters or another part of the ridge, with sightings of dolphins being less frequent around the island during winter. Population size and connectivity are unknown, as are all other aspects of this species' biology.</p> <p>There has been no systematic survey of cetaceans occurring on the north Kermadec Ridge, including the coastal waters of the Kermadec Islands."</p>

Plan Section	<i>Current use values of the Kermadec Islands Subsection: Conservation and restoration</i>			
Submitter No. 12	Heritage Expeditions Limited			<i>Reject</i>
Conservation and restoration	<i>Oppose in Part</i> Conservation and restoration (page 20) is focussed on terrestrial flora and fauna and pest eradication and no mention is made of the marine environment and how it is managed. Specific mention of the marine environment and how it is currently managed should be made, and should include that the remote and wild character helps to protect the marine environment and the surveillance provided is designed to ensure that the coastal marine area is well protected from illegal use.	Make specific mention of the marine environment and how it is currently managed, including that the remote and wild character helps to protect the marine environment and the surveillance provided is designed to ensure that the coastal marine area is well protected from illegal use.	This section of the plan is not intended to address how the islands (land and sea) are managed. It seeks to capture the current use values of the islands.	Refer to the officer's reasons which are adopted.
Submitter No. 12	Heritage Expeditions Limited			<i>Accept</i>
Research	<i>Oppose in Part</i> The section on research includes a paragraph on archaeological research and notes the vulnerability of the sites within the active coastal zone. No mention is made of whether they are within the jurisdiction of the proposed plan. Those sites that have been surveyed, and in particular those that occur in the coastal zone should be marked on the maps in this plan to ensure they are readily identified, assuming there is no cultural impediment to doing so.	Those sites that have been surveyed, and in particular those that occur in the coastal zone should be marked on the maps in this plan to ensure they are readily identified, assuming there is no cultural impediment to doing so.	Given that a number of the rules in the proposed plan contain a condition requiring the avoidance of adverse effects on sites of cultural or historic heritage the sites should be shown on the maps. In instances where the actual location is not known, the general location should be shown. Where a site straddles MHWS, the inland boundary of the coastal marine area, this should be noted to assist integrated management with the Conservation Management Strategy.	Refer to the officer's reasons which are adopted. A set of maps showing the locations of the sites of historic and cultural heritage to be included in the plan in Appendix 2, after the list of sites, is included with this decision as Attachment 2.
Submitter No. 12	Heritage Expeditions Limited			<i>Accept</i>
Shipwrecks	<i>Oppose in Part</i> Wreck exploration and salvage on page 13 of the proposed plan focuses on the General Grant yet there are many other wrecks.	All known sites of wrecks are shown on the maps.	The General Grant is a famous wreck that has received much more attention than other wrecks because of the rumoured cargo of gold she is said to have had on board. There is also special mention made of the General Grant on page 13 because the Marine Reserve (Auckland Islands - Motu Maha) Order 2003 explicitly provides for continued exploration for the General Grant. It is agreed however, that all historic shipwrecks are important for their cultural and historic value. Given that a number of the rules in the proposed plan contain a condition requiring the avoidance of adverse effects on sites of cultural or historic heritage the sites should be shown on the maps. In instances where the actual location is not known, the general location should be shown.	Refer to the officer's reasons which are adopted. A set of maps showing the locations of the sites of historic and cultural heritage to be included in the plan in Appendix 2, after the list of sites, is included with this decision as Attachment 2.
Submitter No. 12	Heritage Expeditions Limited			<i>Reject</i>
Tourism	<i>Oppose in Part</i> The section correctly recognises the challenges and the "fairly limited niche market" for the	Provide similar recognition of the fact that tourism at the Kermadec Islands is a niche market and the limited likelihood for growth as made in relation to	The proposed plan does not seek to predict future growth in relation to tourism, but to manage the potential adverse effects of it as a current use, and be future proof	Refer to the officer's reasons which are adopted.

Plan Section <i>Issue 1: Natural character Subsection: All the rules, Appendix 1 and statement of issues text</i>				
Submitter No. 12	Heritage Expeditions Limited			<i>Accept in part</i>
All the rules, Appendix 1 and statement of issues text	<p><i>Oppose</i></p> <p>Business continuance for existing users requires reasonable certainty of the management requirements and rules operating in these environments. To secure borrowing for capital investment a business needs to be able to demonstrate it has security in its operating environment and potential for growth. Requiring a coastal perm it to be obtained for access to zones close into shore is opposed because it does not demonstrate certainty in the operating environment. The rationale for using vessel length in the rules and maps as an indication of the risk of oil spill is questioned. There are a large number variables that will impact on the risk. Heritage Expeditions Ltd include comments from Captain Joanne Laing Lyttelton who notes numerous vessel specifications and factor that will impact on risk. Further, she notes that vessels up to 150 metres in length do not pose a risk to navigational safety nor threat of oil spill based on length alone. Heritage Expeditions Ltd make the comparison between a floating platform of 75m in length and a powered vessel of superior manoeuvring capability. The floating platform would be permitted in the zone 300 to 600m from MHWS but the 90m powered vessel would be required to obtain a coastal permit.</p>	<p>1) All those rules and maps with vessel length restrictions be rewritten to have a vessel length of 25 to 125 metres as a permitted use with a distance of 300 to 600 metres to MHWS. (2) Re-write the narrative in the proposed plan "Control of surface water activities" (page 25) paragraph 3 and "Control of discharges" page 27) paragraph 2, to reflect accurately the nature of risk from increased boat length and the rationale for applying boat length as the criteria for assessing risk. If boat length is a proxy for other factors then this should be stated clearly. (3) For reasonable business certainty the permitted activities of vessels between 25 and 125 metres be for a minimum of 15 years. (4) Consider whether a tighter definition of vessel is advantageous to exclude large inshore platforms that have limited manoeuvrability compared to ships.</p>	<p>Coastal permits can be granted for up to 35 years. A coastal permit can be applied for a duration that provides for investment certainty. The converse is that a coastal permit could be considered to provide investment certainty for the term that it is granted whereas a permitted activity in a plan could be subject to a plan change at any time.</p> <p>The risk of oil spill and/or biosecurity breach are key issues for the proposed plan. The rules seek to reduce the risk of oil spill and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy. The zone inside 300m of MHWS, as the closest to shore, is the zone of highest risk. The 300m was selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous variables that would contribute to a vessels risk assessment.</p> <p>The explanatory text preceding the policies on the control of surface water activities should explain the rationale for the vessel length and zones established in the rules and maps, and acknowledge that vessel length is used as a proxy for the numerous variables that influence risk. The following paragraph should be included as the sixth paragraph under the title "Control of surface water activities"</p> <p>"The control of surface water activities is based on zones of access relative to vessel length. Vessel length is used as a proxy for numerous factors that can influence risk of oil spill and/or biosecurity breach, such as: vessel length; propulsion system; number, type and location of propellers; number, type and position of rudders; presence and power of bow and/or stern thrusters; windage of the vessel relative to its power; age of vessel; fuel type, duration of access etc. The zone inside 300m from MHWS, as the closest to shore, is the zone of highest risk. The 300m is selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous variables noted above that would contribute to a vessels risk assessment. The degree of risk is further exacerbated by the remoteness of the islands and the environmental conditions that would hamper any response efforts."</p> <p>The alternative to the current vessel length and zones of access matrix, to make it simpler, is to remove the vessel lengths and multiple zones, and require all access inside 600m from MHWS other than ancillary craft to obtain a</p>	<p>Regarding the vessel size classes in the planning maps for the Subantarctic Islands, change the vessel size classes in the maps and rules so that the class "Between 25-75m" is increased to "Between 25-125m". This means there will only be 4 size classes rather than 5 as follows:</p> <ul style="list-style-type: none"> • Ancillary Craft • Up to 25m • Between 25m to 125m • Large (>125m) <p>Refer to revised maps included as Attachment 1 to this decision, to replace the maps in Appendix 1 of the proposed plan.</p> <p>Regarding the vessel size classes in the surface water access rules for the Subantarctic Islands, make the following changes:</p> <ul style="list-style-type: none"> • Delete the vessel length limit of "75 metres" in rule 38 and insert "125 metres" • Delete rule 40 • Delete rule 41. <p>Include the following warning as a note to the surface water access rules and on each of the Subantarctic Islands planning maps: "The Master of any vessel entering any of the harbours of the Subantarctic Islands needs to take particular account of the affect of strong winds."</p> <p>Regarding the narrative in the proposed plan, refer to the officer's reasons which are adopted. Changes required:</p> <p>Include the following text as the sixth paragraph under the title "Control of surface water activities": "The control of surface water activities is based on zones of access relative to vessel length. Vessel length is used as a broad brush proxy for numerous factors that can influence risk of oil spill and/or biosecurity breach, such as: vessel length; propulsion system; number, type and location of propellers; number, type and position of rudders; presence and power of bow and/or stern thrusters; windage of the vessel relative to its power; age of vessel; fuel type, duration of access etc. A provision that encompassed all of these factors would almost certainly be unworkably complex and hence the preference for the broad brush proxy of vessel length. The zone inside 300m from MHWS, as the closest to shore, is the zone of highest risk. The 300m is selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use</p>

Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
All the rules, Appendix 1 and statement of issues text	<i>Support</i> Heritage Expeditions submit that for business certainty the minimum period for coastal permits should be 15 years. SeaFIC agrees that longer term permits provide greater certainty and lower transaction costs than annual or short term periods.		Coastal permits can be granted for up to 35 years. A coastal permit can be applied for a duration that provides for investment certainty. The converse is that a coastal permit could be considered to provide investment certainty for the term that it is granted whereas a permitted activity in a plan could be subject to a plan change at any time. Coastal permit applications need to be considered on a case by case basis and the individual circumstances will influence the duration of a coastal permit.	<i>Reject</i> Refer to the officer's reasons which are adopted.
All the rules, Appendix 1 and statement of issues text	<i>Support</i> Heritage Expeditions submit that they do not agree with the vessel size triggering discretionary access based on a perception that increasing length increases the risk of oil spills. They are concerned at the absence of rationale for distance restrictions which create business complexity and uncertainty. They propose that the narrative in the proposed plan and supporting section 32 Report be re-written to reflect accurately the nature of risk from increased boat length and the rationale for applying boat length as the criteria for assessing risk. SeaFIC agree that the unqualified use of distance and length restrictions in the absence of good technical assessment serve no good management purpose and can unnecessarily add costs and uncertainty to the business environment. SeaFIC support the need for revision and review of matters relating to the control of surface water activities.		As already noted, the risk of oil spill and/or biosecurity breach are key issues for the proposed plan. The rules seek to reduce the risk of oil spill and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy. The zone inside 300m of MHWS, as the closest to shore, is the zone of highest risk. The 300m was selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous variables that would contribute to a vessels risk assessment. The explanatory text preceding the policies on the control of surface water activities should explain the rationale for the vessel length and zones established in the rules and maps, and acknowledge that vessel length is used as a proxy for the numerous variables that influence risk. The following paragraph should be included as the sixth paragraph under the title "Control of surface water activities": "The control of surface water activities is based on zones of access relative to vessel length. Vessel length is used as a proxy for numerous factors that can influence risk of oil spill and/or biosecurity breach, such as: vessel length; propulsion system; number, type and location of propellers; number, type and position of rudders; presence and power of bow and/or stern thrusters; windage of the vessel relative to its power; age of vessel; fuel type, duration of access etc. The zone inside	<i>Accept in part</i> Refer to the decision, reasons and changes in response to the submission by Heritage Expeditions on 'Issue1: Natural character, all the rules, Appendix 1, and the statement of issues text' .

The degree of risk is further exacerbated by the remoteness of the islands and the environmental conditions that would hamper any response efforts."</p> <p>The alternative to the current vessel length and zones of access matrix, to make it simpler, is to remove the vessel lengths and multiple zones, and require all access inside 600m from MHWS other than ancillary craft to obtain a discretionary coastal permit. This will allow case by case assessment of all the variables that could influence risk, as noted above.</p>	

Submitter No. 8 Royal Forest and Bird Protection Society of New Zealand Incorporated

Issue 1 statement

Oppose

The way issue 1 is written is confusing. Section 6(a) RMA does not place a significance test on natural character. The plan must give effect to the New Zealand Coastal Policy Statement 2010 (NZCPS). The relevant sections of the NZCPS are Objective 2 and policy 13. The NZCPS does not have a significant trigger for natural character in either the relevant objective or policy. The language used in the plan is inconsistent with the NZCPS which uses language like outstanding or high when describing values that have more than average natural character. Section 6(a) requires natural character of the coastal marine area is preserved therefore it is not appropriate for activities with the potential for adverse effects to be restricted - these activities should be avoided.

Delete the word "significant" from the issue statement and substitute the word "restricting" with the word "avoiding". In the explanatory text that follows the statement of Issue 1 make the following substitutions: page 22 paragraph 1 substitute "significant" with "high"; page 22 paragraph 3 substitute "significant" with "high"; and page 22 paragraph 5 delete the word "significant" before the words "natural character values...".

It is agreed that Objective 2 and Policy 13 of the NZCPS are the relevant provisions of the NZCPS that Issue 1 of the proposed plan needs to give effect to. And so is Policy 11. A key point of difference for the islands from the rest of mainland New Zealand is that all of the coastal marine areas of the islands have significant natural character, and as such all of the coastal marine areas of the islands need to have their natural character preserved. Activities will be restricted so as to avoid potential adverse effects on the environment, hence the wording of the three objectives for the plan - preserve natural character, enable use consistent with preserving natural character, and avoiding adverse effects of activities....It is recommended to clarify the explanatory text following Issue 1 statement by amending the first sentence to read: "All of the Subantarctic and Kermadec Islands and their marine environments have significant natural character values" and amend objective 1.3 to include the words "all of these" before the words "nationally significant indigenous".

Accept in part

Refer to the officer's reasons which are adopted.

Change required:

In the explanatory text following the Issue 1 statement amend the first sentence to read: "All of the Subantarctic and Kermadec Islands and their marine environments have significant natural character values" and amend objective 1.3 to include the words "all of these" before the words "nationally significant indigenous".

Submitter No. 12 Heritage Expeditions Limited

Support

It is noted that the greatest risks to the Subantarctic and Kermadec Islands are biosecurity breaches and oil spills.

No change.

Submitter No. 13 New Zealand Marine Sciences Society

Neutral

Damage caused by boat anchoring can cause significant adverse effects on the natural character of both the Kermadec and Subantarctic Islands. This should be highlighted under Issue 1. Rather than restricting activities with the potential for adverse effects on natural character, these activities should be avoided.

Damage caused by boat anchoring should be highlighted under Issue 1. Rather than restricting activities with the potential for adverse effects on natural character, these activities should be avoided.

Boat access is the primary access to both groups of islands. While anchoring will cause disturbance to foreshore and seabed, this is unavoidable. An alternative is to provide for permanent moorings, however, permanent moorings have been avoided in the provisions of the plan because they are considered to present a higher risk to biosecurity than allowing anchoring. The preferred anchorages (shown on the maps and in the relevant surface water access rules) will concentrate damage from anchoring at those locations.

Reject

Refer to the officer's reasons which are adopted.

Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
	<i>Oppose</i> The New Zealand Marine Sciences Society (NZMSS) submit that the wording of issue 1 Natural character be amended to replace restricting activities with avoiding activities and uses the damage caused by anchoring as an example. SeaFIC note the RMA is about managing the effects and not activities. If the effects are appropriately managed then there is no need to avoid the activity. The NZCPS (policy 13 a and b) is explicit of the need to avoid adverse effects of activities on natural character rather than the need to avoid activities.		Boat access is the primary access to both groups of islands. While anchoring will cause disturbance to foreshore and seabed, this is unavoidable. An alternative is to provide for permanent moorings, however, permanent moorings have been avoided in the provisions of the plan because they are considered to present a higher risk to biosecurity than allowing anchoring. The preferred anchorages (shown on the maps and in the relevant surface water access rules) will concentrate damage from anchoring at those locations.	<i>Accept in part</i> Refer to the officer's reasons which are adopted.

Submitter No. 12 Heritage Expeditions Limited

Reject

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Sheltering vessels	<p><i>Oppose</i></p> <p>While Heritage Expeditions agree that oil spills and biosecurity breaches are two key risks they note that the threat of a biosecurity breach from their operation is small as they anti-foul annually and have in place strict and practical procedures to reduce and ideally eliminate such threats. A greater risk is posed by the scampi fishing boats that shelter during rough weather 7 to 8 at a time for up to 3 to 4 weeks in the Auckland Islands. These boats are not currently subjected to controls when seeking shelter or likely to undertake the same precautions as expeditionary cruising nor are their visits documented. Specific risk of landing would help reduce this risk. The risk of oil spills remains small from expeditionary vessels as they are typically double skinned and ice strengthened making oil spill unlikely unless are deeply penetrated below the waterline. Heritage Expeditions note that there have been no wrecks of motor vessels on any of the islands.</p>	<p>Specific risk mitigation of biosecurity breaches should be put in place for fishing vessels and others seeking shelter, including an additional policy and rule. Note in the rationale for the rules on page 44 of the Section 32 Report that the likelihood of oil spill from motor vessels remains low for vessels under 125m.</p>	<p>It is acknowledged that to date the fishing industry vessels have not had controls on hull and niche area fouling. In fact, the only vessels that have been targeted in the past have been the ecotourist vessels travelling to the Subantarctic Islands, with a requirement for an in-water hull inspection every 28 days. However, all vessels that intend to go close into shore carry a risk of oil spill and/or biosecurity breach. The rules controlling hull and niche area fouling should apply equally to all vessels.</p>	<p>Refer to the officer's reasons which are adopted.</p>

Sheltering vessels	<p><i>Oppose</i></p> <p>Heritage Expeditions (paras 31 and 32) raise concerns over the risk posed by scampi boats sheltering during rough weather at the Auckland Islands to the introduction of rats and other pests. They state that these vessels are not currently subject to controls when taking shelter or likely to undertake the same precaution as expeditionary cruising. For these reasons specific risk mitigation is required such as de-ratting certificates and guidelines in the event of landing through an additional policy and rule. SeaFIC note that scampi boats are floating food processing factories. They operate at high levels of hygiene. Under the Animal Products Act 1999 they are required by Animal Products (Regulated Control Scheme - Limited Processing Fishing Vessels) Regulation 2001 to have effective procedures to control pest (including rats) and to meet the specifications of that Act. These stringent requirements remove the need for de-ratting certification or other guidelines.</p>		<p>All vessels that intend to go close into shore carry a risk of oil spill and/or biosecurity breach. The rules controlling hull and niche area fouling should apply equally to all vessels.</p>	<p><i>Accept</i></p> <p>Refer to the officer's reasons which are adopted.</p>

Plan Section *Natural character objectives Subsection: Objective 1.3*

Submitter No. 8 **Royal Forest and Bird Protection Society of New Zealand Incorporated**

Objective 1.3

Oppose in Part

It is unclear if it is intended that all the indigenous biodiversity on the Kermadec and Subantarctic Islands is nationally significant and therefore significant on a local, regional and national scale or if this plan is seeking to protect nationally significant indigenous biodiversity. If it is the former the language used is inappropriate and misleading in terms of the tests that are described in the RMA. If it is the latter the Minister of Conservation may also implement objectives, policies and methods for maintaining indigenous biological diversity that is not considered to be significant [s.30(1)(ga) and s.31A(1)(a) RMA]. The objective is considered inconsistent with the Maintenance of biodiversity and biosecurity policies on pages 24 and 25 of the proposed plan.

Delete the word "nationally" from Objective 1.3 and add a new objective to read: "Avoid, remedy or mitigate adverse effects of activities on the indigenous biological diversity of the Kermadec and Subantarctic Islands and their coastal marine areas".

It is intended that all the indigenous biodiversity on the Kermadec and Subantarctic Islands is nationally significant. As noted, a key point of difference for the islands from the rest of mainland New Zealand is that all of the coastal marine areas of the islands have significant natural character, and as such all of the coastal marine areas of the islands need to have their natural character preserved. Activities will be restricted so as to avoid potential adverse effects on the environment, hence the wording of the three objectives for the plan - preserve natural character, enable use consistent with preserving natural character, and avoiding adverse effects of activities.... The policies on pages 24 and 25 give effect to the objectives. Section 31A only gives the Minister powers, functions and duties of a regional council as provided in section 30(1)(d) RMA in respect of the coastal marine area. It is recommended to clarify the explanatory text following Issue 1 statement by amending the first sentence to read: "All of the Subantarctic and Kermadec Islands and their marine environments have significant natural character values" and amend objective 1.3 to include the words "all of these" before the words "nationally significant indigenous".

Reject

Refer to the decision and reasons in response to Forest and Bird's submission on Issue 1 Natural character.

------------	------------	---------------	--------------------------	-------------------------

Plan Section *Natural character - Maintenance of biosecurity policies Subsection: New policy*

Submitter No. 6 **Sanford Limited**

New policy

Including a new policy to give effect to the New Zealand Coastal Policy Statement Policy 6 by recognising that fishing is located in the coastal marine area of some islands (e.g. not the Auckland Islands which is a marine reserve) and provide for this activity.

Include a new policy which reads, 'To maintain and provide for the needs of fishing vessels in the coastal marine area'.

The plan already recognises fishing activity as an existing use (along with other uses of the coastal marine area of the islands) and does not (and cannot) prevent the activity of fishing.

Reject

The plan recognises the fishing industry as existing users of the coastal marine area of the Sub-Antarctic Islands in the description of current use values. The officer's report acknowledged an error in not referring to commercial fishing in the description of the users of surface waters preceding the policies on the Control of surface water activities, in response to SeaFICs submission on the matter. The objectives policies and rules give effect to policy 6 of the New Zealand Coastal Policy Statement 2010.

Further subs

38 **New Zealand Marine Sciences Society**

Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
New policy	<i>Oppose</i> The Sanford submission states that the inclusion of a new policy to maintain and provide for the needs of fishing vessels in the coastal marine area would implement policy 6 in the New Zealand Coastal Policy Statement (NZCPS). This is incorrect as policy 6 of the NZCPS 2010 does not address fishing (and the former NZCPS does not contain a policy 6). The implementation of policy 13 in the 2010 NZCPS would, however, require areas of at least high natural character be identified and that adverse activities in areas of outstanding natural character be avoided. Most, if not all of the coastal marine area addressed by this plan would be of high and possibly outstanding natural character. The policy being sought is, therefore, inappropriate.		The plan already recognises fishing activity as an existing use (along with other uses of the coastal marine area of the islands) and does not (and cannot) prevent the activity of fishing. Refer discussion and recommendations on the submission from Forest and Bird on the Issue 1 statement.	<i>Accept</i> Refer to the officer's reasons which are adopted.

Submitter No. 4 **Talleys Group Limited**

Policies 3 to 6 and rules A, B, 26, 27 and 28

Oppose
Where vessel owners are meeting good hygiene standards the requirement for a diver inspection adds undue cost and operational inefficiencies. An alternative approach is proposed whereby a vessel is permitted to enter the coastal marine area based on information provided in advance on its anti-fouling system and history, similar to the model proposed by MAF Biosecurity New Zealand in their Import Health Standard for biofouling. DOC should have the discretion to require a hull inspection if it considers the vessel hygiene system inadequate. The vessel hull and niche area inspection protocol and forms in Appendix 4 of the proposed plan would provide a consistent approach for any

An alternative approach be considered whereby a vessel is permitted to enter the coastal marine area based on information provided in advance on its anti-fouling system and history, similar to the model proposed by MAF Biosecurity New Zealand in their Import Health Standard for biofouling. And the requirement for a "clean" hull and niche areas be amended to vessels intending to land.

The suggestion of restricting the hull and niche area biosecurity rules to vessels intending to land is not supported. All vessels that go close into shore are a biosecurity risk. The scampi fishing vessels that use the inshore waters around Auckland Island for shelter but do not land generally go closer into shore, and remain in the one location for longer periods of time (can be up to 3 or 4 weeks) than any other users of the inshore waters around the islands and represent a significant biosecurity risk.

Accept in part

Refer to the decision, reasons and changes in response to Sanford's submission on rule 26.

The suggestion of an alternative approach could be considered (as an alternative option rather than a replacement). It is agreed that good vessel hygiene is key to minimising marine biosecurity risk. It is recommended that an alternative option be included that

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
	<p>such inspection. The fouling threshold is also considered too high, particularly in niche areas and it is unlikely that many vessels would meet the clean definition of slime layer only. The limit of 1000m from MHWS for the application of the hull fouling rules is questioned. It is acknowledged that the greatest risk to the environment is when vessels are stationary or slow moving such as at anchor and recommended that the requirement for a "clean" hull and niche areas be amended to vessels intending to land.</p>		<p>allows a vessel exemption from the in-water inspections if the vessels anti-fouling is less than 6 months old for the duration of the time that the vessel is in the coastal marine area of the islands. The alternative option could be included as a part of rule 26, under the Standards/Terms/Conditions below the bold words "And either:" to be worded as follows: "The vessels anti-fouling is less than 6 months old for the duration of the time that the vessel is in the coastal marine area of the islands"</p> <p>Its noted that the first requirement of existing rules A and 26 requires evidence that the vessel has an anti-fouling system applied in accordance with the manufacturers instructions and will be within the manufacturers timeframe for effectiveness to be provided in advance, similar to the MAF Biosecurity NZ Import Health Standard. Regarding the threshold of slime layer only, the Department's experience of requiring in-water inspections of eco-tourist operators over the last 4 years with that threshold is that it is achievable. It is also the threshold recommended by NIWA in the report "Development of a template for vessel hull inspections and assessments ob biosecurity risks to the Kermadec and Subantarctic Islands regions" Floerl et al 2010. The International Maritime Organisation (IMO) has a Ballast Water and Biofouling Working Group developing guidelines. At the meeting of 11 February 2010 (BLG 14/WP.4) the Group agreed (paragraph 8) that the concept of a clean ship, being a ship that has no more than a micro bio-fouling or slime layer, was useful and should be the ultimate aim of bio-fouling management to minimize the risk of transfer of invasive aquatic species. Paragraph 4.4 of the draft guidelines states "A ship following this guidance and maintaining a micro bio-fouling layer only would be considered a clean ship and would have a very low potential for transfer of invasive aquatic species." The consultation document released by MAF Biosecurity New Zealand during the development of the draft Import Health Standard for Biofouling acknowledges that New Zealand's high values areas such as the Subantarctic Islands warrant special inspection and treatment processes (MAF BNZ Consultation paper 10/04 May 2010, paragraph 58).</p>

The alternative option could be included as a part of rule 26, under the Standards/Terms/Conditions below the bold words "And either:" to be worded as follows: "The vessels anti-fouling is less than 6 months old for the duration of the time that the vessel is in the coastal marine area of the islands".</p> <p>Its noted that the first requirement of existing rules A and 26 requires evidence that the vessel has an anti-fouling system applied in accordance with the manufacturers instructions and will be within the manufacturers timeframe for effectiveness to be provided in advance, similar to the MAF Biosecurity NZ Import Health Standard. Regarding the threshold of slime layer only, the Department's experience of requiring in-water inspections of eco-tourist operators over the last 4 years with that threshold is that it is achievable. It is also the threshold recommended by NIWA in the report "Development of a template for vessel hull inspections and assessments of biosecurity risks to the Kermadec and Subantarctic Islands regions" Floerl et al 2010. The International Maritime Organisation (IMO) has a Ballast Water and Biofouling Working Group developing guidelines. At the meeting of 11 February 2010 (BLG 14/WP.4) the Group agreed (paragraph 8) that the concept of a clean ship, being a ship that has no more than a micro bio-fouling or slime layer, was useful and should be the ultimate aim of bio-fouling management to minimize the risk of transfer of invasive aquatic species. Paragraph 4.4 of the draft guidelines states "A ship following this guidance and maintaining a micro bio-fouling layer only would be considered a clean ship and would have a very low potential for transfer of invasive aquatic species." The consultation document released by MAF Biosecurity New Zealand during the development of the draft Import Health Standard for Biofouling acknowledges that New Zealand's high values areas such as the Subantarctic Islands warrant special inspection and treatment processes (MAF BNZ Consultation paper 10/04 May 2010, paragraph 58).</p> <p>The policies and rules are not intended to prevent a vessel from carrying provisions. It is recommended that the definition of "harmful organism" be amended to include a footnote to read "The definition of "Harmful organism" is not intended to include meat and plants</p>	<p><i>Accept</i></p> <p>Refer to the officer's reasons which are adopted.</p> <p>Change required:</p> <p>Include as a footnote to the definition of 'harmful</p>

	definition needs to be amended to allow for the carrying of provisions.		carried as normal ships provisions. However, ship operators need to be aware that some items carried as normal ships provisions can be high risk to the marine environment - for example chicken or smoked chicken could carry listeria".	organism' in the glossary that reads: "The definition of 'Harmful organism' is not intended to include meat and plants carried as normal ships provisions. However, ship operators need to be aware that some items carried as normal ships provisions can be high risk to the marine environment - for example chicken or smoked chicken could carry listeria."
Submitter No. 5 Policy 2	New Zealand Seafood Industry Council Limited <i>Oppose in Part</i> Vessels will carry stores including meat and plants (potatoes, peas etc) that are not indigenous to the islands but necessary for the functioning of the vessel. The rules and/or definition needs to be amended to allow for the carrying of provisions.	Amend the rules and/or definition to allow for the carrying of provisions.	The policies and rules are not intended to prevent a vessel from carrying provisions. It is recommended that the definition of "harmful organism" be amended to include a footnote to read "The definition of "Harmful organism" is not intended to include meat and plants carried as normal ships provisions. However, ship operators need to be aware that some items carried as normal ships provisions can be high risk to the marine environment - for example chicken or smoked chicken could carry listeria".	<i>Accept</i> Refer to decisions and reasons in response to Talley's submission on policy 2.
Submitter No. 6 Policy 2	Sanford Limited <i>Oppose</i> Sanford supports a policy that differentiates between vessels that intend to land on islands and those vessels that have no planned physical interaction (i.e. fishing boats). Clearly boats and people that land present a greater risk to the environment. Notwithstanding this, we would accept that all boats coming within the coastal marine area are checked for animal pests (in particular rodents) and plants. It is impractical to check vessels for insects. How would this be done - fumigation?	Amend Policy 2: 'To maintain and protect biodiversity and the intrinsic values of ecosystems by reducing the risk of introductions of harmful or invasive species with a two tiered compliance test (i) stringent controls for vessels and people that are intending to land on the islands and (ii) guidelines for checking all other vessels for animal and plant pests which come inside the coastal marine area. Amend first bullet point to read, 'Harmful pest and plant animals (particularly rodents). Delete second bullet point.	The suggestion of restricting the hull and niche area biosecurity rules to vessels intending to land is not supported. All vessels that go close into shore are a biosecurity risk. The scampi fishing vessels that use the inshore waters around Auckland Island for shelter but do not land generally go closer into shore, and remain in the one location for longer periods of time (can be up to 3 or 4 weeks) than any other users of the inshore waters around the islands and represent a significant biosecurity risk . In response to other submissions on this policy (and associated conditions in rules) the following amendments are recommended: the condition in the rules be re-worded to read: "Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators knowledge is free of harmful plants and animals (including insects)", that Policy 2 be similarly amended; and insert a section for "Other methods" after policy 6 and include a method that states the Department, in consultation with industry, will develop guidelines for undertaking biosecurity checks of the dry areas of vessels.	<i>Accept in part</i> Refer to the decision, reasons and changes in response to Sanford's submission on rule 26.
Submitter No. 12 Policy 2	Heritage Expeditions Limited <i>Oppose in Part</i> Policy 2 includes a reference to "checking prior to departure, particularly for rodents and insects. Further clarity is required on what insect control is necessary. Further, the "point of departure" is unclear, how these checks will be undertaken, and by whom?	Clarify meaning of the "point of departure" and the process for checking. An addition to policy 2 stating that a "good practice guideline" will be developed to cover checks on departure for rodents and insects, and this be carried through into the rules.	It is recommended that the condition in the rules be re-worded to read: "Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators knowledge is free of harmful plants and animals (including insects)", that Policy 2 be similarly amended	<i>Accept in part</i> Refer to the decision, reasons and changes in response to Sanford's submission on rule 26.

Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
Policy 2	<p><i>Support</i></p> <p>Heritage Expeditions (via the Tourism Research Consultants document) state that policy 2 includes a reference to checking prior to departure particularly for rodents and insects. They seek clarity on insect controls, point of departure and how the checks will be undertaken and by whom. They recommend clarification on the point of departure and the process of checking and that good practice guidelines be developed to cover checks on departures for rodents and insects and this be carried forward into the rules. SeaFIC agree that the lack of clarity on these issues and in particular with regard to insects is unhelpful. SeaFIC support the development of best practice guidelines but consider that these should not be included in the rules as they are guidelines to meet rule 23 and the standards terms and conditions required for surface water activities.</p>		It is recommended that the condition in the rules be reworded to read: "Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators knowledge is free of harmful plants and animals (including insects)", that Policy 2 be similarly amended for consistency; and insert a section for "Other methods" after policy 6 and include a method that states "The Department, in consultation with industry, will develop guidelines for undertaking biosecurity checks of the dry areas of vessels."	<i>Accept in part</i> Refer to the decision, reasons and changes in response to the submission from Sanford on rule 26.
Submitter No. 5	New Zealand Seafood Industry Council Limited			
Policy 2 and rules 29 to 32 inclusive, 35, 36, 38, 40, 41, 44, 45, 46.	<p><i>Support in Part</i></p> <p>While recognising the value of checking vessels before voyages, it is noted that an inspection cannot completely ensure that vessels are totally free of harmful plants and animals (including insects). SeaFIC suggests DOC works with commercial interests to develop appropriate guidelines for such vessel checks.</p>	Modify the Standards/Terms/Conditions of rules 29 to 32 inclusive, 35, 36, 38, 40, 41, 44, 45, 46, regarding inspection above the water line to read: "Vessel has been thoroughly checked for harmful organisms above the waterline".	It is recommended that the condition in the rules be reworded to read: "Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators knowledge is free of harmful plants and animals (including insects)", that Policy 2 be similarly amended for consistency; and insert a section for "Other methods" after policy 6 and include a method that states the Department, in consultation with industry, will develop guidelines for undertaking biosecurity checks of the dry areas of vessels.	<i>Accept in part</i> Refer to decision and reasons given in response to Sanford's submission on the hull fouling rule 26.
Submitter No. 6	Sanford Limited			
Policy 3	<p><i>Oppose</i></p> <p>The s32 report is thin on why the 1000m trigger was chosen. If the hull of a vessel is free of invasive species, as evidenced by the pre-departure inspection, and does not intend to anchor then it is unnecessary to impose an</p>	<p>(i) Amend Policy 3 after the words hull fouling so that the policy is only triggered if a vessel intends to land; delete reference to 1000m.</p> <p>(ii) Include guidelines for vessels which are in the coastal marine area but which do not intend to come within 300m of the MHWS.</p>	The 1000 metre limit relates to the risk of marine biosecurity breach as opposed to terrestrial. The 1000 metres is an arbitrary measure. It was selected on the basis that it was not practical to apply the marine biosecurity controls to the full coastal marine area, and rather than introducing another distance measure into the	<i>Reject</i> Refer to the officer's reasons which are adopted.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
	additional 1000m trigger. DOC papers suggest that 300m provides adequate protection to the island from rats.		<p>plan it was logical to use the existing limit for surface water access. It is not possible to select a distance based on scientific evidence given the number of uncertainties such as trying to predict potential invasive species and what their characteristics for colonisation might be. In choosing the 1000 metre limit the plan is accepting an arbitrary level of risk. If the hull of a vessel is free of invasive species, as evidenced by the pre-departure in-water inspection, then the 1000m limit is irrelevant. What it means is that vessels intending to visit the inshore areas of the islands but not go closer than 1000 metres are exempt from the marine biosecurity rules.</p> <p>Other submitters (Talleys and SeaFIC) suggested an alternative approach could be considered (as an alternative option rather than a replacement). On the basis that good vessel hygiene is key to minimising marine biosecurity risk it is recommended that an alternative option be included that allows a vessel exemption from the in-water inspections if the vessels anti-fouling is less than 6 months old for the duration of the time that the vessel is in the coastal marine area of the islands.</p>	
Submitter No. 12 Policy 3	Heritage Expeditions Limited <i>Oppose in Part</i> Policy 3 refers to maintaining and protecting biodiversity via hull fouling by restricting access inside 1000m from MHWS. The rationale for this distance is not stated. If a pragmatic management approach is being applied this should be stated as such and if there is scientific evidence to support why this is useful and it should be referenced.	Include the rationale for the distance restrictions.	<p>The risk of oil spill and/or biosecurity breach are key issues for the proposed plan. The rules seek to reduce the risk of oil spill and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy. The zone inside 300m of MHWS, as the closest to shore, is the zone of highest risk. The 300m was selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous variables that would contribute to a vessels risk assessment. The explanatory text preceding the policies on the control of surface water activities should explain the rationale for the vessel length and zones established in the rules and maps, and acknowledge that vessel length is used as a proxy for the numerous variables that influence risk. The following paragraph should be included as the sixth paragraph under the title "Control of surface water activities"</p> <p>"The control of surface water activities is based on zones of access relative to vessel length. Vessel length is used as a proxy for numerous factors that can influence risk of oil spill and/or biosecurity breach, such as: vessel length; propulsion system; number, type and location of propellers; number, type and position of rudders; presence and power of bow and/or stern thrusters; windage of the vessel relative to its power; age of vessel; fuel type, duration of access etc. The zone inside 300m from MHWS, as the closest to shore, is the zone of highest risk. The 300m is selected on the basis that is the generally accepted limit the Norwegian rat can swim.</p>	<i>Accept</i> Refer to the officer's reasons which are adopted, and the submission by Heritage Expeditions on 'Issue1: Natural character, all the rules, Appendix 1, and the statement of issues text' for the text of the new paragraph to be added to the plan.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
<p>Submitter No. 6 Policy 5</p>	<p>Sanford Limited <i>Oppose</i> The policy and time frame for processing resource consent applications introduces uncertainty. If an operator undertakes a risk assessment by an approved certifier and passes, this should be a permitted activity.</p>	<p>Amend policy so that it explicitly states that where the risk assessment passes this is a permitted activity.</p>	<p>The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous variables noted above that would contribute to a vessels risk assessment. The degree of risk is further exacerbated by the remoteness of the islands and the environmental conditions that would hamper any response efforts."</p> <p>The independent risk assessment is not a pass/fail assessment. The discretionary status requiring a coastal permit allows consideration of the independently assessed risk along with other factors, such as intended duration of visit to the inshore waters of the islands, on a case by case basis. If the risk is considered too great the discretionary status gives the Minister the ability to decline access inside 1000 metres from MHWS. Discretionary status also allows the ability to impose conditions to further mitigate risk if possible.</p>	<p><i>Reject</i> Refer to the officer's reasons which are adopted.</p>
<p>Submitter No. 8 Policy 6</p>	<p>Royal Forest and Bird Protection Society of New Zealand Incorporated <i>Oppose in Part</i> The policy states "To provide for and encourage appropriate research that builds knowledge and understanding of the intrinsic values of the ecosystems" whereas Objective 3.3 for cultural and historic heritage uses the words "To facilitate research..." "Facilitate" implies a much more active role. One of the major difficulties for researchers to remote areas is access. The Department has not been overly supportive of researchers attempting to gain access to the Kermadecs for research purposes. DOC could prepare a research plan and offer passage on ships where possible for researchers to undertake work. Researchers could be allowed to stay on Raoul for a longer period of time, such as 3 to 6 months like the volunteers.</p>	<p>Include another objective to be worded as follows: "To facilitate research into the understanding of the intrinsic values of the ecosystems, and promote awareness and appreciation of those values.</p>	<p>The propose plan in its entirety, the objectives, policies, and particularly the rules, combine to recognise the value of and facilitate research. Offering passage on ships and duration of stay are beyond the scope of the plan.</p>	<p><i>Reject</i> Refer to the officer's reasons which are adopted.</p>
<p>Submitter No. 12 Policy 6</p>	<p>Heritage Expeditions Limited <i>Oppose in Part</i> Policy 6 encourages "appropriate" research - greater clarity of what is considered appropriate would be helpful. The research strategy could be referenced here.</p>	<p>Clarify the definition of "appropriate" research.</p>	<p>It is recommended to delete the word "appropriate" from policy 6. The requirement that research in the islands builds knowledge and understanding of the intrinsic values of ecosystems is considered adequate to target the policy. It is recommended to include a footnote to the policy that states "For the Subantarctic Islands, there is a research strategy in place called "The New Zealand Subantarctic Islands Research Strategy 2003" which identifies research priorities for those islands.</p>	<p><i>Accept in part</i> Refer to the officer's reasons which are adopted. Changes required: Delete the word "appropriate" from policy 6. Include a footnote to policy 6 that states: "For the Subantarctic Islands, there is a research strategy in place called "The New Zealand Subantarctic Islands Research Strategy 2003" which identifies research priorities for those islands."</p>

Plan Section	<i>Natural character - Control of surface water activities policies Subsection: Other methods</i>			
Submitter No. 8	Royal Forest and Bird Protection Society of New Zealand Incorporated			<i>Reject</i>
Other methods	<i>Support</i> One of the biggest biosecurity risks to the Kermadecs is from visiting yachties coming from the Pacific Islands who may stop at the Kermadec Islands even though they don't have a permit (i.e. illegally). Control of these people is not going to be via the normal system of rules.	An additional method requiring an active public awareness campaign to the yachting community of the Pacific (such as via yacht clubs) about the legal requirements for travelling through to New Zealand via the Kermadec Islands.	This is beyond the scope and jurisdiction of an RMA regional coastal plan. DOC staff work closely with Customs New Zealand to help prevent his happening.	Refer to the officer's reasons which are adopted.
Submitter No. 4	Talleys Group Limited			
Policy 12	<i>Support</i> Support the use of ancillary craft.	No change.	Fishing vessels at shelter use ancillary craft for transport of parts, crew and supplies between ships.	
Submitter No. 5	New Zealand Seafood Industry Council Limited			
Policy 12	<i>Support</i> Support the use of ancillary craft. Fishing vessels at shelter use ancillary craft for transport of parts, crew and supplies between ships.	No change.		
Submitter No. 6	Sanford Limited			<i>Accept in part</i>
Policy 7	<i>Oppose</i> It is unclear why it has been determined that the risk of an incident is relative to vessel size. The outcome of an incident may have some bearing to the size of a vessel (e.g. volume of oil spilled), but is not indicative of risk or potential threat to biosecurity. In our view the greatest risk (albeit of small probability) occurs when small vessels are in the process of coming ashore. We note that the Department has provided for its own landings as a permitted status. The s32 Report is silent on the additional cost this policy will impose on fishing vessels, which transit through but have no intention of landing.	Amend policy so that the provisions are triggered by vessels that intend to land, end the policy after the words biosecurity breach, and delete reference to vessel size.	The risk of oil spill and/or biosecurity breach are key issues for the proposed plan. The rules seek to reduce the risk of oil spill and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy. The zone inside 300m of MHWS, as the closest to shore, is the zone of highest risk. The 300m was selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous variables that would contribute to a vessels risk assessment. The explanatory text preceding the policies on the control of surface water activities should explain the rationale for the vessel length and zones established in the rules and maps, and acknowledge that vessel length is used as a proxy for the numerous variables that influence risk. The following paragraph should be included as the sixth paragraph under the title "Control of surface water activities" "The control of surface water activities is based on zones of access relative to vessel length. Vessel length is used as a proxy for numerous factors that can influence risk of oil spill and/or biosecurity breach, such as: vessel	Changes required: Add a sixth paragraph under the title "Control of surface water activities" as follows: "The control of surface water activities is based on zones of access relative to vessel length. Vessel length is used as a broad brush proxy for numerous factors that can influence risk of oil spill and/or biosecurity breach, such as: vessel length; propulsion system; number, type and position of propellers; number, type and position of rudders; presence and power of bow and/or stern thrusters; windage of the vessel relative to its power; age of vessel; fuel type, duration of access etc. A provision that encompassed all of these factors would almost certainly be unworkably complex and hence the preference for the broad brush proxy of vessel length. The zone inside 300m from MHWS, as the closest to shore, is the zone of highest risk. The 300m is selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous

Policy 8	<i>Oppose</i> Port Ross is the main breeding ground for the formerly endangered southern right whale and so it is appropriate to restrict access during breeding and nursing times. Policy 8 and the associated terms and conditions in rules 32, 33, 35 and 38 should remain.		Policy 8 and associated Standards/Terms/Conditions in rules [32, 33, 35, and 38] are not "inconsistent" as per s.68(2) RMA with Marine Mammals Protection Regulations 1992 (MMPR), rather they add another layer.	<i>Accept</i> Refer to the officer's reasons which are adopted.

Submitter No. 4 Talleys Group Limited

Policy 9	<i>Oppose</i> In restricting the anchorages based on ecotourism, the proposed plan removes options for safe anchorage and concentrates vessels at single locations. The Buckens and Young report (page 17) states that the sailing directions and nautical charts published by LINZ identify 14 safe anchorages off the Subantarctic Islands and 7 off the Kermadec Islands - Talleys Group Ltd question why these are not retained with the proposed plan? They note that fishing vessels have no specific interest in landing or sightseeing. Safe anchorage must remain at the discretion of the master of the vessel.	Include the 14 safe anchorages off the Subantarctic Islands and 7 off the Kermadec Islands as identified in the LINZ charts and noted in the Buckens report.	The anchorages were not selected based on ecotourism only. The 'preferred' anchorages shown on the maps and listed in the rules were selected to provide for existing use and consulted on with those existing users, including the scampi fishing industry. The Department consulted with the scampi fishing industry, given that they regularly shelter close into shore at locations around Auckland Island, to ensure we included their preferred locations, taking into account the variety of possible weather conditions. The technical marine advice the Department obtained from Captain Kees Buckens of the New Zealand Maritime School notes that the charts for both the Kermadec and Subantarctic Islands were mostly carried out before the introduction of IHO1998 standards which require a design scale of about 1.5mm, and are at variable standards from 50m to 500m to unknown. The Advice recommends that the Department approach LINZ and request those 14 anchorages off the Subantarctic Islands and 7 off the Kermadec Islands currently shown on the LINZ charts be removed and replaced with the DOC approved anchorages.	<i>Reject</i> Refer to the officer's reasons which are adopted.

	single locations. The Buckens and Young report (page 17) states that the sailing directions and nautical charts published by LINZ identify 14 safe anchorages off the Subantarctic Islands and 7 off the Kermadec Islands - why these are not retained with the proposed plan? Safe anchorage must remain at the discretion of the master of the vessel.		the scampi fishing industry. The Department consulted with the scampi fishing industry, given that they regularly shelter close into shore at locations around Auckland Island, to ensure we included their preferred locations, taking into account the variety of possible weather conditions. The technical marine advice the Department obtained from Captain Kees Buckens of the New Zealand Maritime School notes that the charts for both the Kermadec and Subantarctic Islands were mostly carried out before the introduction of IHO1998 standards which require a design scale of about 1.5mm, and are at variable standards from 50m to 500m to unknown. The Advice recommends that the Department approach LINZ and request those 14 anchorages off the Subantarctic Islands and 7 off the Kermadec Islands currently shown on the LINZ charts be removed and replaced with the DOC approved anchorages.

Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
Policy 9	<i>Oppose</i> Whether landing or not all vessels should be treated the same. It is likely that fishing crews will land informally if holed up for long periods. Risk from oil spills and biosecurity breaches are threats from all vessels whether they are cruise, naval, sailing, research or fishing etc.		All vessels that go close into shore carry risk of oil spill and/or a biosecurity risk. The 'preferred' anchorages shown on the maps and listed in the rules were selected to provide for existing use and consulted on with those existing users, including the scampi fishing industry. The scampi fishing vessels that use the inshore waters around Auckland Island for shelter but do not land generally go closer into shore, and remain in the one location for longer periods of time (can be up to 3 or 4 weeks) than any other users of the inshore waters around the islands and represent a significant biosecurity risk. Sanford submitted on this policy also, suggesting that it be amended by deleting the words 'of an appropriate size'. It is recommended that policy 9 be amended to read: "To indentify preferred anchorages as exceptions to the access restrictions to allow for safe anchorage for those vessels that need to be close in to shore for safe anchorage because of their size."	<i>Accept</i> Refer to the decision, reasons and chnages in respsonse to the submission from Sanford on Policy 9.

Submitter No. 6 Policy 9	Sanford Limited <i>Oppose</i> It is unclear why "appropriate size" has been used in this policy and what the correlation is between size and risk. Captain Buckens in his technical report does not define size but says those proposed by Doc are 'reasonable'. There appears to be no analysis.	Amend policy by deleting the words 'of an appropriate size'.	Amend policy 9 to read: "To identify preferred anchorages as exceptions to the access restrictions to allow for safe anchorage for those vessels that need to be close in to shore for safe anchorage because of their size."	<i>Accept in part</i> Changes required: Delete the words "of an appropriate size" from policy 9 and replace with the words "that need to be close in to shore for safe anchorage because of their size."

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section	<i>Natural character - Control of discharges of contaminants explanation Subsection: None</i>			
Submitter No. 8	Royal Forest and Bird Protection Society of New Zealand Incorporated	<p><i>Neutral</i></p> <p>One of the biggest problems worldwide in the marine environment is plastics. Particularly Raoul Island. Large amounts of plastic pollution wash up at Raoul and become a hazard for both marine and terrestrial species. While marine discharges are controlled under the Marine Pollution Regulations a more active role in advocating greater prevention of plastics entering the coastal environment is required.</p>	<p>As noted the collection and disposal of rubbish from vessels is controlled by the Resource Management (Marine Pollution) Regulations 1998, any discharges not regulated will be captured by policy 16. Further, in the case of the Kermadec Islands, they are a marine reserve to the outer limits of the territorial sea and as such any discharges are also restricted by the Marine Reserves Act 1971. The rubbish problem that the submission is concerned about appears to originate from outside the coastal marine area, which is beyond the jurisdiction of an RMA coastal plan to control. It is beyond the scope and jurisdiction of an RMA coastal plan to direct that any plastic or debris that is washed up onto Denham Bay or Onerake Beach is to be collected and removed from the island or incinerated on location on Raoul Island on a regular basis.</p>	<p><i>Reject</i></p> <p>Refer to the officer's reasons which are adopted.</p>
Submitter No. 12	Heritage Expeditions Limited	<p><i>Oppose in Part</i></p> <p>The threat of an oil spill is noted (page 27, 2nd and 4th paragraphs) It would be helpful to have "large vessels" defined. The paragraph includes a reference to "the number and/or size of vessels interested in visiting the islands increases" and continues and states the risk of oil spill increases. Interest does not increase risk - nor does interest equate with use. Further, increased size does not necessarily increase risk of oil spill. It is noted that poor management and/or maintenance are referenced as possible causes also.</p>	<p>The proposed plan defines large vessels in the legend matrix of the maps as vessels greater than 125 metres in length. Insert at the end of the third sentence paragraph 2, page 27 "(vessels greater than 125 metres in length)". End the 4th sentence in the same paragraph after the words "ever present." as requested. Include a new sentence as follows: "As the number and/or the size of vessels interested in visiting the islands increases, so does the need to have a framework in place to manage the potential adverse effects of visiting vessels, particularly to reduce the risk of oil spill."</p>	<p><i>Accept in part</i></p> <p>Refer to the submissions of Sanford Limited regarding the control of discharges of contaminants. The narrative and policies have been changed as a result of those submissions.</p>
Submitter No. 6 Paragraph 3	Sanford Limited	<p><i>Oppose in Part</i></p> <p>The plan should not foreclose the opportunity for ship-to-ship transfers of fuel. Already significant international legislation, controls and mitigation measures exist to manage this activity including the most recent changes to MARPOL dealing with 'Prevention of Pollution during Transfer of Oil at Sea'. These new rules came into force on 1 January 2011. Vessel operators intending to undertake ship-to-ship transfers have the necessary resources on board to respond to any pollution incident.</p>	<p>Amend last sentence to read; 'Ship-to-ship fuel transfers at sea impose additional risk and are controlled by international legislation.</p> <p>MARPOL Annex 1 provisions for ship-to-ship transfers are restricted to tankers transferring cargo and specifically exclude bunkering. "Resolution MEPC.186(59) was adopted at MEPC 59 and contains a new Chapter 8 of MARPOL Annex I on the prevention of pollution during the transfer of oil cargo between oil tankers at sea. The new regulation does not apply to any bunker operation and oil transfer operation associated with fixed or floating platforms". National jurisdictions are entirely within their rights to impose more stringent measures within Territorial waters. Given the high value, sensitivity and remoteness of the islands and their marine environment, and the difficulties associated with any response in the event of an incident it is considered appropriate to prohibit ship to ship transfers of fuel for bunkering. For clarity, however, the activity description of rule 47 should be to read: "Ship to ship fuel transfers in the coastal marine area of the Subantarctic Islands."</p>	<p><i>Reject</i></p> <p>Refer to the decision and reasons in response to Sanford's submission on rule 47.</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Submitter No. 6	Sanford Limited	Retain distinction between fuel types and link it to risk. Remove reference to speed.	<p data-bbox="1590 184 2160 237">For consistency the same amendment should be made to rule 51 for the Kermadec Islands.</p> <p data-bbox="1590 390 2160 877">It is not practical to state the likely adverse effects of different fuel types in relation to level of risk to the environment. There are many variables that will influence the risk, such as fuel type, weather and wind conditions at the time, amount of fuel spilled, the location in terms of the currents, the location in terms of proximity to different species. For example, a diesel spill in the vicinity of the habitat of Campbell Island teal (the world's rarest duck, indigenous to Campbell Island) would be catastrophic for that species with the potential to result in extinction - diesel opens the plumage of birds affecting the water proofing and ability to stay warm and allowing any oil or sludge components to stick. Amend the second paragraph on page 27 to read: "The challenging conditions of strong winds and currents present navigation safety risks, particularly when vessels are close to shore."</p>	<p data-bbox="2175 352 2318 373"><i>Accept in part</i></p> <p data-bbox="2175 390 2347 411">Change required:</p> <p data-bbox="2175 449 2665 590">Amend the second sentence in the second paragraph on page 27 to read: "The challenging conditions of strong winds and currents present navigation safety risks, particularly when vessels are close to shore."</p>
Paragraphs 2, 3 and 4 of page 27.	<p data-bbox="516 390 676 411"><i>Support in Part</i></p> <p data-bbox="516 428 997 709">We support the distinction of fuel types and agree that diesel based fuel carries less environmental impact in the unlikely event of a spill. The likely adverse effect of different fuel types in relation to level of risk has not been sufficiently evaluated by the RMA s32 analysis. The reference to speed and navigation in correlation to risk also sends a confusing message; it implies that vessels should travel faster.</p>			

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section	<i>Natural character - Control of discharges of contaminants policies Subsection: Other methods 2</i>			
Submitter No. 6	Sanford Limited			
Other methods 2	<i>Support</i> Sanford supports the use of guidelines and signals its willingness to work with the Department of Conservation in establishing these. Retain.	No change.		
Submitter No. 4	Talleys Group Limited			
Policies 17 and 18	<i>Support</i> Support the use of other methods for the reduction of artificial noise and light. Fishing vessels are operational 24 hours a day, similar to factories and therefore make noise and use light.	No change.		
Submitter No. 5	New Zealand Seafood Industry Council Limited			
Policies 17 and 18	<i>Support</i> Support the use of other methods for the reduction of artificial noise and light.	No change.		
Submitter No. 6	Sanford Limited			
Policies 17 and 18	<i>Support</i> Support non-regulatory method in Policy 17 and Policy 18. Fishing vessels work 24 hours a day. Retain the policy as non-regulatory.	No change.		
Submitter No. 10	Southern Lakes Helicopters Limited			<i>Accept</i>
Policies 17 and 18 and method 2	<i>Oppose in Part</i> Southern Lakes Helicopters Ltd provide support for vessels and the Department of Conservation in the Southern Ocean. These policies could hinder future SAR/medivac operations. Policies 17 and 18 and method 2 need to allow for artificial noise and artificial light sources associated with SAR/medivac missions by helicopter. Night sun search lights and noise from aircraft are a necessity in emergency situations that could arise from shipping activities in and around the islands and this should be catered for.	Acknowledge that aircraft noise and artificial light sources for SA missions are a permitted activity.	There is not intention that the provisions of the proposed plan restrict activities necessary in emergency situations. Add a third note to the notes under the title "Discharges" in the rules tables to read: "These rules do not restrict noise and light discharges associated with SAR/medivac missions by helicopter."	Refer to the officer's reasons which are adopted. Change required: Add a third note to the notes under the title "Discharges" in the rules tables to read: "These rules do not restrict noise and light discharges associated with SAR/medivac missions by helicopter."
Submitter No. 6	Sanford Limited			<i>Reject</i>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Policy 13	<p><i>Oppose</i></p> <p>The application of policy around the Subantarctic Islands could unnecessarily restrict fishing vessels access to the coastal marine area. The s32 report has failed to consider current practices and maritime routes; the effect the prohibition has on the fishing industry; and the costs of the rule in relation to potential benefits. Fishing vessels have been using this water space for many years and have an excellent record of compliance to best practice standards. MARPOL already regulates this activity.</p>	<p>Delete Policy 13 as this activity is already regulated by international law.</p>	<p>Refer separate report regarding rule 48 and heavy fuel oil for discussion during the Hearing.</p>	<p>Refer to decision and reasons in response to Sanford's submission on rule 48.</p> <p>Changes required:</p> <p>Add the following subheading before the section 'Controls on structures, disturbance, deposition and reclamation':</p> <p>"Avoiding and reducing the impacts of accidental discharges of contaminants"</p> <p>After the new subheading, add the following text:</p> <p>"The threat of an oil spill (an accidental discharge of hydrocarbons and contaminants) is a key issue. The challenging conditions of strong winds and currents present navigation safety risks, particularly when vessels are close to shore. This is especially the case for large vessels. The threat of an oil spill from any one of the vessels that visit the islands is ever present, and as the number and/or the size of vessels interested in visiting the islands increases, so does the risk of maritime incidents and oil spills. Incidents and oil spills can also result from poor management and/or maintenance.</p> <p>Severity of impact from oil spills is closely related to the type of fuel, the amount of fuel (the bigger the vessel, the larger the volume of fuel), and the exposure of the area to the spill. Heavier grade fuel oils (and fuel oil components) would have the most severe impact because the heavy grade oil components could persist in the environment for many years, and also because the heavier grade fuel oils (the 'residual oils' that are left after the refining process distils off diesel and other products) also contain a range of contaminants that were present in the crude oil. While diesel still presents a risk to some wildlife (a severe risk to the Campbell Island teal, the world's rarest duck, and shags), it is the easiest type of fuel spill to manage, as it will disperse and evaporate in a high-energy environment (see the New Zealand National Oil Spill Contingency Plan - Annex 9 - Subantarctic Islands). Similarly, the severity of discharges to air is closely related to fuel type. Marine diesel will burn cleaner than a heavier fuel oil, assisting with reducing emissions.</p> <p>This plan will prohibit the carriage and use of heavy fuel oil as fuel or the carriage of heavy fuel oil as cargo in the coastal marine areas of the Subantarctic and Kermadec Islands. The terms of the ban and the definition of what constitutes a heavy fuel oil (HFO) are the same as for the Antarctic Area HFO ban that came into force under MARPOL Annex 1 Chapter 9 in August 2011. Apart from cruise ships entering the Snares Islands – Tini Heke coastal marine area briefly in</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Submitter No. 15	Minister of Conservation	Amend policy 13 so that it reads as follows: "To prohibit carrying heavy fuel oil as a cargo, carrying and using heavy fuel oil as a fuel, and ship-to-ship transfers of any fuel type in the coastal marine areas of the Kermadec and Subantarctic Islands."	This is unnecessarily restrictive. The policy should be amended to reflect the MARPOL restriction on heavy fuel oil due to come into force in August 2011, as follows: "To prohibit carrying heavy fuel oil as a cargo, carrying and using heavy fuel oil as a fuel, and ship-to-	Refer to the decision, reasons and changes in response to the submissions by Sanford on policy 13 and rule 48.

29 New Zealand Seafood Industry Council Limited				
Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
Policy 13	<i>Oppose</i> The Minister of Conservation submits that vessels should be allowed to carry and use heavy fuel oil in small quantities for the purposes of equipment lubrication and that the policy should be amended to reflect the MARPOL restrictions on heavy fuel oil due to come into force in August 2011. SeaFIC presumes the Minister is referring to MARPOL Annex 1 Chapter 9 - Special requirements for the use or carriage of oils in the Antarctic area. The Subantarctic Islands are excluded from the definition of Antarctic Area (south of latitude 60 degrees). SeaFIC can see no rationale for the need to follow such special requirements for the purpose of the proposed plan and revert to their earlier submission on the need to review rule 48 and policy 13.		Refer reasons and recommendations to the submission of SeaFIC on Policy 13 and rule 48.	<i>Reject</i> Refer to the decisions, reasons and changes in response to Sanford's submissions policy 13 and rules 47 and 48.

Submitter No. 4 Talleys Group Limited

Policy 13 [and rule 47]

Oppose

Oppose the prohibition on the use and carriage of heavy fuel oil - refer submission on rule 48 for discussion and decision request. Also oppose the prohibition of ship to ship transfers of fuel on the basis that such activity is already regulated by MARPOL ANNEX 1 and enforced by the Maritime Transport Act 1994. The prohibition of ship to ship transfers of fuel is not supported by any analysis of risk and adverse effect - which should consider fuel type and volume and the transient nature of effect. As a prohibited activity policy 13 and rule 47 would affect the use of ancillary craft and small vessels with small fuel reservoirs that may need to be refuelled between sightseeing trips. There could also be emergency requirements where fuel needs to be transferred between vessels (e.g. fuel contamination).

Amend policy 13 [and rule 47] so that ship to ship fuel transfers are permitted activities subject to prevailing legislation and best practice.

MARPOL Annex 1 provisions for ship-to-ship transfers are restricted to tankers transferring cargo and specifically exclude bunkering. "Resolution MEPC.186(59) was adopted at MEPC 59 and contains a new Chapter 8 of MARPOL Annex I on the prevention of pollution during the transfer of oil cargo between oil tankers at sea. The new regulation does not apply to any bunker operation and oil transfer operation associated with fixed or floating platforms". National jurisdictions are entirely within their rights to impose more stringent measures within Territorial waters. Given the high value, sensitivity and remoteness of the islands and their marine environment, and the difficulties associated with any response in the event of an incident it is considered appropriate to prohibit ship to ship transfers of fuel for bunkering. The rules of the plan do not apply to emergency situations - refer the note at the beginning of the rules tables on page 34.

Reject

Refer to the decisions and reasons given in response to Sanford's submissions policy 13 and rules 47 and 48.

Submitter No. 5 New Zealand Seafood Industry Council Limited

Policy 13 [and rule 47]

Plan Section *Natural character - Controls on structures, disturbance, deposition, and reclamation policies Subsection: None*

Submitter No. 8 **Royal Forest and Bird Protection Society of New Zealand Incorporated**

Support

As resources become more limited and technology improves there remains the possibility that fishing activities and the development of new extractive industries may occur near the Kermadec and Subantarctic Islands. If such development occurs, it is likely to be outside the coastal marine area, however the impacts of such activities could have adverse effects inside the coastal marine area (i.e. increased shipping traffic, potential for contamination from intentional and non-intentional discharges).

Include a new policy relating to changes in commercial activities adjacent to the coastal marine area, and that discharges are required to be avoided to preserve the natural character and to protect the biodiversity values of the Kermadec and Subantarctic Islands.

The jurisdiction of an RMA regional coastal plan is only for the coastal marine area, that is, to the outer limits of the territorial sea. Control of commercial activities beyond the territorial sea will be regulated under the recently announced EEZ Bill if and when that Bill is enacted.

Reject

Refer to the officer's reasons which are adopted.

Submitter No. 15 **Minister of Conservation**

Policy 19

Support

Policy 19 page 28. The Policy excludes other scientific monitoring such as acoustic monitoring for whales that is beneficial i.e. not by whalers.

Reword Policy 19 to read: To avoid the placement of new structures on the foreshore or seabed, unless they are necessary for the maintenance of existing infrastructure and/or for monitoring of seismic or volcanic activity or for other scientific monitoring

The suggested amendment would make this policy consistent with Rule 3 and would provide for other types of research. Reword Policy 19 to read: "To avoid the placement of new structures on the foreshore or seabed, unless they are necessary for the maintenance of existing infrastructure and/or for monitoring of seismic or volcanic activity or for other scientific monitoring."

Accept

Refer to the officer's reasons which are adopted. Changes required:

Add the following words to the end of policy 19: " or for other scientific monitoring."

Submitter No. 3 **New Zealand Historic Places Trust**

Policy 21 and rule 4

Support in Part

The Fishing Rock and Boat Cove landings have historic values associated with the establishment of the Meteorological Station on Raoul Island so where possible the form and fabric of these should be retained. NZHPT recommend that a heritage assessment of the structures is undertaken first before any works to upgrade the Fishing Rock and Boat Cove landings on Raoul Island.

Policy 21 and rule 4 are amended to require a heritage assessment of the structures to be undertaken first, in accordance with the Department of Conservation's Historic SOP.

It is recommended that Policy 21 and rule 4 be amended by substituting the words "historic work plan" with the words "heritage assessment".

Accept

While it is acknowledged that the Fishing Rock and Boat Cove landings are working structures that need upgrading for health and safety reasons, the historic values of these sites should be preserved to the extent practicable. Amend policy 35 and rule 4 by substituting the words "historic work plan" with the words "heritage assessment". For consistency rules 5 and 7 need to be similarly amended to refer to a "heritage assessment" rather than a "historic work plan".

Recommend that a heritage assessment of these structures be carried out before any works are undertaken (in accordance with DOC Historic SOP).</p>	<p>No change to policy 21 - refer submission on rule 4.</p>		<p><i>Accept in part</i> Refer to the submission from the NZ Historic Places Trust regarding this policy. It is acknowledged that the Fishing Rock and Boat Cove landings are working structures that need upgrading for health and safety reasons, the historic values of these sites should be preserved to the extent practicable. Amend policy 35 and rule 4 by substituting the words "historic work plan" with the words "heritage assessment". For consistency rules 5 and 7 need to be similarly amended to refer to a "heritage assessment" rather than a "historic work plan".</p>
<p>Submitter No. 4 Talleys Group Limited Policy 22</p>	<p>Section 12(1)(g) of the RMA enables lawful harvesting of any plant or animal to destroy damage or disturb any foreshore or seabed which includes the deployment of fishing gear in the coastal marine zone. However, would like it specified that anchoring is an accepted activity.</p>	<p>Would like specification that anchoring is an accepted activity.</p>	<p>No amendment necessary. The adverse effects of disturbance to seabed are considered to be of such small scale as to be de minimis.</p>	<p><i>Reject</i> Refer to the officer's reasons which are adopted.</p>
<p>Submitter No. 5 New Zealand Seafood Industry Council Limited Policy 22</p>	<p><i>Support in Part</i> Section 12(1)(g) of the RMA enables lawful harvesting of any plant or animal to destroy damage or disturb any foreshore or seabed which includes the deployment of fishing gear in the coastal marine zone. However, activities in support of harvesting such as anchoring are not excluded. For the avoidance of doubt, recommend that disturbance from anchoring is a permitted activity.</p>	<p>Provide for disturbance from anchoring as a permitted activity</p>	<p>No amendment necessary. The adverse effects of disturbance to seabed are considered to be of such small scale as to be de minimis.</p>	<p><i>Reject</i> Refer to the officer's reasons which are adopted.</p>
<p>Submitter No. 4 Talleys Group Limited Policy 25</p>	<p><i>Support in Part</i> Support the provision for continued temporary mooring for Mr Cave but note that to access the mooring and harvest crayfish Mr Cave would need a resource consent. If the controls around vessel length and zones of access were simplified as suggested in Talleys Group submission on rules 29 to 46 (and policy 7) this would be avoided.</p>	<p>Rules [29 to 46] relating to controls on access to zones close to shore be converted to guidelines for vessel operators. These guidelines should be developed by a joint working party.</p>	<p>A fundamental principle of the proposed plan is to reduce the risk of oil spill and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy, the zone inside 300m of MHWS being the zone of highest risk. Our assessment of current use showed that only one fisherman currently uses the coastal marine area of any of the Subantarctic Islands to obtain CRA8 quota, Mr Stuart Cave, a rock lobster fisherman who uses the area around Snares Island to catch his quota. Policy 25 and rule 8 provide for Mr Cave to place a temporary mooring as a permitted activity. This is a one-off exception to the general principle in the proposed</p>	<p><i>Accept in part</i> Refer to the reasons provided by the officer which are adopted, however, rather than including a new rule and repeating the same conditions, access to the coastal marine area inside 300m from MHWS should be provided for Mr Cave within rule 8. Change required: Include the words: "and access inside 300 metres from MHWS" after the words "foreshore and seabed" in the activity description of rule 8.</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
			plan that structures and permanent moorings should be avoided because of the increased risk of biosecurity breaches. This exception for Mr Cave recognises his existing use and seeks to provide for his health and safety by recognising that because of the nature of the seabed and environmental conditions inshore around Snares Island conventional anchoring is not practical. In preparing the proposed plan, the Department consulted with Mr Cave and Mr Malcolm Lawson, CEO of the CRA8 Management Committee. Mr Lawson confirmed that there are no vessels fishing in CRA8 fishery that are in excess of 25 metres in length, and he considered that the ability for vessels up to 25 metres to apply for a discretionary permit to access inside 300 metres is sufficient, provided Mr Cave's access is provided for. Access inside 300m for Mr Cave also needs to be provided for. It is recommended that a new rule is included in the Surface water access rules for the Subantarctic Islands that provides for permitted access for Mr Stuart Cave both to access his mooring and obtain his CRA8 quota. The rule will be subject to conditions such as biosecurity checks of the dry parts of the vessel, and the same sunset clause as in rule 8 - the rule will only allow access provided Mr Cave continues to hold quota in CRA8 and continues to fish for it around the Snares Island with a gap of no more than 36 months.	
Submitter No. 5 Policy 25	New Zealand Seafood Industry Council Limited <i>Support in Part</i> Support the provision for continued temporary mooring for Mr Cave but note that to access the mooring and harvest crayfish Mr Cave would need a resource consent. This inconsistency would be avoided if SeaFIC's recommendation under rule 37 was adopted.	Adopt the request for amendment to rule 37.	It was an oversight that the proposed plan did not provide for access for Mr Stuart Cave to the temporary mooring provided for his use in rule 8. The activity description for rule 8 will be amended to include access inside 300 metres from MHWS. Refer Talley's submission on policy 25 for further discussion.	<i>Accept in part</i> Refer to decision and reasons provided in response to Talley's submission on policy 25.

35	New Zealand Marine Sciences Society			
	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
Policy 25	<i>Oppose</i> The personal ownership of moorings (temporary or otherwise) is not supported for sensitive marine environments with high ecological values.		Policy 25 and rule 8 provide for Mr Cave to place a temporary mooring as a permitted activity. This is a one-off exception to the general principle in the proposed plan that structures and permanent moorings should be avoided because of the increased risk of biosecurity breaches. This exception for Mr Cave recognises his existing use and seeks to provide for his health and safety by recognising that because of the nature of the seabed and environmental conditions inshore around Snares Island conventional anchoring is not practical.	<i>Reject</i> Refer to the officer's reasons regarding this further submission which are adopted, and the decision, reasons and changes in response to Talley's submission on policy 25.
Submitter No. 13	New Zealand Marine Sciences Society			<i>Reject</i>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Policy 25	<i>Oppose</i> Oppose policy 25, which allows for preferential treatment of an individual (Mr Stuart Cave). Individual rights to moorings should not be provided for.	Any moorings provided for under the plan should be able to be used by any vessel owner on a first come first served basis.	The provisions of the proposed plan seek to provide for existing use while avoiding adverse effects on natural character. Allowing preferential access for Mr Cave allows his continued use of the area to provide for his economic and social wellbeing. It also provides for Mr Caves health and safety and in doing so, reduces the risk of oil spill and/or biosecurity breach from Mr Cave's activities. It is well known that anchor holding in due to the nature of the seabed and environmental conditions at Snares Island is difficult and conventional anchoring is not practical.	Refer to the officer's reasons which are adopted.

Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
Policy 25	<i>Oppose</i> The New Zealand Marine Sciences Society (NZMSS) submit that individual rights to moorings should not be provided (Policy 25, page 29) and that any moorings provided for under the coastal plan should be able to be used by any vessel owner on a first come first served basis. Policy 25 enables Mr Stuart Cave to continue to provide for temporary safe mooring to support his legitimate right to harvest crayfish at the Snares. The plan places specific terms and conditions on Mr Cave regarding the placement and use of the structure (rule 8). If NZMSS consider there is a good need for additional moorings at the Snares for use by the general public then they should make that recommendation.		Allowing preferential access for Mr Cave allows his continued use of the area to provide for his economic and social wellbeing, and his health and safety, and in doing so, reduces the risk of oil spill and/or biosecurity breach from Mr Cave's activities. It is well known that anchor holding in due to the nature of the seabed and environmental conditions at Snares Island is difficult and conventional anchoring is not practical. The General public do not have access to the Snares Islands, which are national nature reserves and landing on the islands is by permit only.	<i>Accept</i> Refer to the decision, reason and changes in response to the submission from Talley's on policy 25.

Plan Section <i>Kaitiakitanga of coastal marine area of Kermadec Islands Subsection: Policies 26 and 27</i>				
Submitter No. 3 Policies 26 and 27	New Zealand Historic Places Trust <i>Support</i> The NZHPT supports ongoing consultation with Ngati Kuri and Te Aupouri concerning the Kermadec Islands. The NZHPT consider that it is unlikely that the descendant community of the people responsible for the archaeological remains on Raoul Island will be conclusively identified in the near future, but in the interim Ngati Kuri and Te Aupouri have asserted their mana whenua and role as kaitiaki, so it is appropriate to continue to consult with them and maintain a positive working relationship.	No change.		
Submitter No. 9 Policies 26 and 27	Andy Dodd <i>Support</i> Support ongoing consultation with Ngati Kuri and Te Aupouri over the Kermadecs until any relevant claims before the Waitangi Tribunal have been resolved. It is unlikely that the descendent community of the people responsible for the archaeological remains on Raoul Island will be conclusively identified in the near future, but in the interim Ngati Kuri and Te Aupouri have asserted their mana whenua and role as kaitiaki, so it is appropriate to continue to consult with them and maintain a positive working relationship.	No change		
Submitter No. 11 Policies 26 and 27	Te Runanga Nui o Te Aupouri Trust <i>Oppose</i> The submitters consider that policies 26 and 27 completely fail to recognise and provide for the relationship and values of Te Aupouri with the coastal marine area of the Kermadecs in a manner reflecting their status as tangata whenua. The obligations are minimal and fall short of the mechanisms through which the Department of Conservation will engage with Ngai Tahu ki Murihiku. Te Aupouri should be given the same recognition and level of engagement as that provided for Ngai Tahu ki Murihiku in relation to the Subantarctic Islands	Amend policies 26 and 27 to include policies similar to policies 28 to 32 with necessary amendment as agreed between the Department of Conservation and Te Aupouri.	The recognition and level of engagement provided for Ngai Tahu ki Murihiku in relation to the Subantarctic Islands are a result of statutory acknowledgements in the Ngai Tahu Claims Settlement Act 1998, including Schedule 97 Taonga species. In the development of policies 28 to 32, the Department took into account Te Tangi a Taurira - The Cry of the People, an iwi management plan developed by Ngai Tahu ki Murihiku.	<i>Reject</i> Refer to the officer's reasons which are adopted.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
------------	------------	---------------	--------------------------	-------------------------

Plan Section *Issue 3: Cultural and historic heritage Subsection: Issue 3 Other methods and Appendix 2*

Submitter No. 3 New Zealand Historic Places Trust

Issue 3 Other methods and Appendix 2

Support in Part

The NZHPT is aware of recent field work of Archaeologist Dr Nigel Prickett, who has provided the NZHPT with an informal list of notable sites on Campbell Island which the NZHPT believes should be considered for inclusion in Appendix 2. Dr Prickett also notes that he believes some of the items listed in Appendix 2 are not present. NZHPT suggest consideration be given to removing these sites from Appendix 2, along with one of the references to K036/1 which is listed twice. The NZHPT recommends the Department consults further with Dr Prickett before confirming the list in Appendix 2. The NZHPT considers that a commitment to regular revision and updating of Appendix 2 should be included in the Other methods of Issue 3. The NZHPT recommends the inclusion of Low Flat site and some of the dune burials in Appendix 2 on the grounds that these sites are subject to coastal erosion and may potentially be damaged by activities occurring on the adjacent foreshore.

Include another method in Other methods of Issue 3 that requires regular revision and updating of Appendix 2. Delete the repeat listing of KO36/1 and delete any terrestrial sites that do not extend into the coastal marine area. Include Low Flat and some of the dune burials on the grounds in appendix 2.

It is useful to clearly signal the intention to review and update Appendix 2 on a regular basis. Listing KO36/1 twice is an error that should be corrected. Only sites that are located in the coastal marine area of the islands should be included in Appendix 2 since this is the area of jurisdiction of the proposed plan. The department will work further with Dr Prickett to determine which sites are still physically there and which are in the coastal marine area.

Accept in part

The officer has worked further with both Dr Prickett regarding the Campbell Island sites and Mr Dodd regarding Raoul Island sites, and updated the list in Appendix 2 of the proposed plan, as included as Attachment 2 to this decision. In updating the list of sites for Campbell Island Dr Prickett stressed that for those sites other than shipwrecks the majority of the site is above MHWS and as such integrated management of the sites above and below MHWS is critical. This is provided for in Other Methods No. 4. Amend policy 34 to delete "and Epigwaitt Castaway Hut Site" from the first bullet point. In the second bullet point of policy 34, after the words "North East Harbour Whaling Station", add a footnote as follows: "This site was a whaling station between 1911 and 1914. Jetty remains and ringbolts are evident in the inter-tidal area, and there is a sea wall around most of point. A significant part of the site, however, is on terrace above, above MHWS." The low flat site and dune burials are not included in Appendix 2 because they are located above MHWS. Add Other Methods No.7 "The Department of Conservation will review and update Appendix 2 as necessary".

Submitter No. 12 Heritage Expeditions Limited

Support in Part

The objectives and policies are supported. However, in the interest of reducing the potential for damage to these sites all should be shown on the maps thereby informing managers especially, and visitors.

The location of sites of cultural and historic heritage should be shown on the maps. A reference to this could be included in the notes.

Given that a number of the rules in the proposed plan contain a condition requiring the avoidance of adverse effects on sites of cultural or historic heritage the sites should be shown on the maps. In instances where the actual location is not known, the general location should be shown. Where a site straddles MHWS, the inland boundary of the coastal marine area, this should be noted to assist integrated management with the Conservation Management Strategy.

Accept

Refer to the officer's reasons which are adopted. A set of maps showing the locations of the sites of historic and cultural heritage to be included in the plan in Appendix 2, after the list of sites, is included with this decision as Attachment 2.

Further subs

33 New Zealand Historic Places Trust

Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
------------	-----------------	---------------	--------------------------	-------------------------

Support in Part

NZHTP is supportive of the proposal to include sites listed in Appendix 2 on the maps in Appendix 1. However, it is difficult to see the benefit of including all known sites where these would not be regulated or protected by the rules of the coastal plan. It is considered that to add all of the known items would cause confusion for users of the coastal plan in terms of consent requirements for sites displayed on the maps

Appendix 2 includes all known sites of cultural and historic heritage located in the coastal marine areas of the Kermadec and Subantarctic Islands. Only those sites listed in Appendix 2 should be shown on maps in the plan, and the relevant rules should cross reference with the relevant maps.

Accept

Refer to the officer's reasons which are adopted. A set of maps showing the locations of the sites of historic and cultural heritage to be included in the plan in Appendix 2, after the list of sites, is included with this decision as Attachment 2.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
	but not necessarily listed in Appendix 2.			
Submitter No. 3	New Zealand Historic Places Trust			<i>Reject</i>
Note at the end of Issue 3	<i>Support</i> The NZHPT considers it prudent to introduce the role of the NZHPT in the archaeology authority process early on, to provide up front and clear information, rather than in a note at the end of Issue 3.	The advise note situated at the end of Issue 3: Cultural and historic heritage section is removed and repositioned in the introduction.	The introductory text outlines the issues associated with the management of cultural and historic heritage, followed by the policies that set out how the issues will be managed - it is logical that other relevant considerations or authorisations under other legislation follow the policies and other methods as advice notes. The importance of the note could be lost if it was incorporated into introductory text of Issue 3 rather than being clearly noted following the cultural and historic heritage policies. It would also be contrary to the way all important advice notes have been incorporated into the proposed plan.	Refer to the officer's reasons which are adopted.
Submitter No. 9	Andy Dodd			
Objectives 3.1 to 3.3 and policies 33 and 35 to 44	<i>Support</i> Support the objectives and policies for cultural and historic heritage generally. These give increased protection to historic heritage while still allowing for appropriate scientific investigation.	No change.		
Submitter No. 2	Southland Conservation Board			<i>Accept in part</i>
Other methods 6	<i>Neutral</i> The Board would like to see more discussion on the need to increase public awareness of the Subantarctic Islands and their coastal environments through interpretation at a location away from the islands.	Include more discussion on the need to increase public awareness of the Subantarctic Islands and their coastal environments through interpretation at a location away from the islands.	Other methods 6 already provides for encouragement of greater public awareness, however it could be expanded so that it is explicit that this includes interpretation at locations away from the islands.	Amend method 6 (in Issue 3) by inserting the words ", including at locations away from the islands" after the words "where appropriate" in method 6 a).
Submitter No. 3	New Zealand Historic Places Trust			<i>Accept</i>
Policies 41, 42, 43 and 44	<i>Support in Part</i> The NZHPT considers there is some confusion as to the interpretation and intention of policies 41 and 42. Policy 42 should be amended to clarify who has to make the provision for recording of the details of the site. The NZHPT supports the re-wording of policies 43 and 44 (from the wording in the draft plan).	Amend policy 42 by including the words "the applicant shall " in place of the word "to" after the words "...potential to affect heritage sites," . No change to policies 43 and 44.	Policy 42 should to be clarified in terms of who is responsible for recording the details of the site.	Policy 42 should be amended to clarify who is responsible for recording the details of the site. Amend policy 42 by including the words "the applicant shall " in place of the word "to" after the words "...potential to affect heritage sites," .
Submitter No. 3	New Zealand Historic Places Trust			<i>Reject</i>
Policy 34	<i>Support</i> The NZHPT recommends adding Low Flat	Add the prehistoric site Low Flat to the list of sites for active conservation in policy 34.	The Low Flat prehistoric site is above MHWS and therefore outside the jurisdiction of this plan.	The national significance of the Low Flat prehistoric site is acknowledged, however, it is outside the jurisdiction of this plan because it is

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
	prehistoric site to the list of sites for active conservation on grounds of national historic significance. Despite the fact that little is known about the extent of the site, it is a site of exceptional national significance. It is the only site in New Zealand to contain direct evidence of two-way voyaging back into the Pacific and has unique potential to provide evidence relating to the earliest settlement of New Zealand.			above MHWS.
Submitter No. 3 Policy 34	New Zealand Historic Places Trust <i>Support in Part</i> Listing sites of historic importance in two places in the plan, Appendix 2 and policy 34, has the potential to create confusion and risk something being overlooked.	The listings in policy 34 of the plan should be placed in a separate schedule and be removed from the policy section of Issue 3: Cultural and historic heritage.	The proposed plan currently has only two sites for active conservation listed in policy 34. It is not considered necessary to include a separate schedule at this stage for just two sites. Further, the inclusion of those two sites in the policy as well as in Appendix 2 highlights the significance of those two sites. It is unlikely that users of the plan would miss or overlook sites since the two sites for active consultation are listed in both Appendix 2 and policy 34, and there are cross-references in both policy 34 and Appendix 2.	<i>Reject</i> Refer to the officer's reasons which are adopted.
Submitter No. 9 Policy 34	Andy Dodd <i>Support</i> Recommend adding Low Flat prehistoric site to the list of sites for active conservation on grounds of national historic significance. Little is known about the extent of the site but it is a site of exceptional national significance. It is the only site in NZ to contain direct evidence of two-way voyaging back into the Pacific and has unique potential to provide evidence relating to the earliest settlement of NZ.	Add the following to Policy 34: "The Low Flat prehistoric site K036/1, Raoul Island."	The Low Flat prehistoric site is above MHWS and therefore outside the jurisdiction of this plan.	<i>Reject</i> Refer to the officer's reasons which are adopted.
Submitter No. 3 Policy 36	New Zealand Historic Places Trust <i>Support</i> While supportive of policy 36, the policies of Issue 3 do not go far enough with respect to achieving section 6(e) RMA and a policy should be included to require appropriate consultation with tangata whenua where it is proposed to undertake activities on sites of special spiritual, historical and cultural significance to tangata whenua. Further, a scoping exercise should be undertaken with the view of identifying such sites for inclusion in the coastal plan.	Include a new policy as follows : "Where it is proposed to undertake activities on sites of special spiritual, historical and cultural significance to tangata whenua, appropriate consultation must be conducted with tangata whenua." And if not already undertaken, scoping exercise be undertaken with the view of identifying sites of special spiritual, historical and cultural significance to tangata whenua for inclusion in the coastal plan.	The new policy is not necessary - policy 41b) already requires regard to be had to Maori spiritual, historic and cultural values and the outcome of tangata whenua consultation when assessing an application for an activity with the potential to affect cultural or historic sites. Policy 36 leaves the option open for tangata whenua to identify sites of special spiritual, historical and cultural significance, if they wish to do so.	<i>Reject</i> Refer to the officer's reasons which are adopted.

Plan Section *Rules Subsection: Checking for harmful plants and animals (including insects)*

Submitter No. 12 Heritage Expeditions Limited

Checking for harmful plants and animals (including insects)

Oppose in Part

The plan defines what is considered acceptable below the water line in detail, but does not include detail for management of harmful plants or animals (including insects) above the water line. The challenge of creating such standards/terms/conditions is recognised. It is suggested that a pragmatic guideline approach be taken to this that is based on good practices. (Refer submission on policy 2)

The reference to "insects" be removed (or qualified with the intention to prepare and provide guidelines on insects) from the rules and guidelines be prepared based on good practice.

It is recommended that the condition in the rules be reworded to read: "Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators knowledge is free of harmful plants and animals (including insects)", that Policy 2 be similarly amended for consistency; and insert a section for "Other methods" after policy 6 and include a method that states the Department, in consultation with industry, will develop guidelines for undertaking biosecurity checks of the dry areas of vessels.

Accept in part

Refer to decision, reasons and changes in response to Sanford's submission on rule 26.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section <i>Occupation rules Subsection: Rule 1</i>				
Submitter No. 15	Minister of Conservation	The fourth condition of Rule 1 should be amended as follows: "The mooring will not be located in the vicinity of any of known (mapped) heritage sites listed in Appendix 2 and shown on maps XX"	The rule needs to be amended to allow for fact that the exact location of the heritage sites is not always known, in order for the rule to be able to be implemented. Given that a number of the rules in the proposed plan contain a condition requiring the avoidance of adverse effects on sites of cultural or historic heritage the sites should be shown on the maps. In instances where the actual location is not known, the general location should be shown. The fourth condition of Rule 1 should be amended as follows: "The mooring will not be located in the vicinity of any of known (mapped) heritage sites listed in Appendix 2 and shown on maps XX"	<i>Accept in part</i> Refer to the officer's reasons which are adopted. Changes required: A set of maps showing the locations of the sites of historic and cultural heritage to be included in the plan in Appendix 2, after the list of sites, is included with this decision as Attachment 2.
Rule 1	<p><i>Support</i></p> <p>The fourth condition of rule 1 "The mooring will not be located within any heritage site as listed in Appendix 2". This is an issue because not all the locations of the heritage sites noted in Appendix 2 are known. Further, the proposed plan does not contain maps showing the locations or approximate locations of any of the heritage sites listed in Appendix 2. The known Heritage Sites should be mapped. Dots or areas shaded could be placed on maps in Appendix 1 or prepare new maps. Secondly some sites have not been accurately mapped so a larger area than for example the actual ship wreck site should be shown.</p>			

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
------------	------------	---------------	--------------------------	-------------------------

Plan Section Structures rules Subsection: Rule 4

Submitter No. 9 Andy Dodd

Rule 4

Support

The Fishing Rock and Boat Cove landings have historic values associated with the establishment of the Meteorological Station on Raoul Island so where possible the form and fabric of these should be retained. Recommend that a heritage assessment of these structures be carried out before any works are undertaken (in accordance with DOC Historic SOP).

Require a heritage assessment of the Fishing Rock and Boat Cove landings prior to works being undertaken.

Amend rule 4 by substituting the words "historic work plan" with the words "heritage assessment"

Accept

Refer to the submission from the NZ Historic Places Trust regarding policy 21 and rule 4. While it is acknowledged that the Fishing Rock and Boat Cove landings are working structures that need upgrading for health and safety reasons, the historic values of these sites should be preserved to the extent practicable. Amend policy 35 and rule 4 by substituting the words "historic work plan" with the words "heritage assessment". For consistency rules 5 and 7 need to be similarly amended to refer to a "heritage assessment" rather than a "historic work plan".

Submitter No. 15 Minister of Conservation

Rule 8

Support

This rule provides for the safe mooring for Mr Stuart Cave for the purpose of obtaining crayfish at Snares Island as a permitted activity but no provision has been made to allow Mr Cave permitted access inside 300 metres from MHWS.

A new rule should be included in the surface water access rules that provides permitted access for Mr Cave inside the 300 metre zone from MHWS, subject to similar conditions as rule 29.

It is recommended to include a new rule in the Surface water access rules for the Subantarctic Islands in between rules 36 and 37 as follows:

The activity description to read: "Access to the coastal marine area of Snares Island for the purpose of mooring and fishing for crayfish"

The Standards/Terms/Conditions to read: "Access for Mr Stuart Cave to use the mooring provided for in rule 8 for the purpose of obtaining crayfish as per Mr Stuart Cave's quota allocation in CRA8. This rule will only continue to apply if Mr Stuart Cave continues to hold quota on CRA8 and continues to fish for crayfish in the area around Snares Islands with a gap of no more than 36 months. Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators' knowledge is free of harmful plants and animals (including insects)." Classification to read: "Permitted".

Accept

Refer to the decision and reasons in response to the submission from Talleys on policy 25. Rather than including a new rule and repeating the same conditions, access to the coastal marine area inside 300m from MHWS should be provided for Mr Cave within rule 8.

Change required:

Include the words: "and access inside 300 metres from MHWS" after the words "foreshore and seabed" in the activity description of rule 8.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section	<i>Discharges rules Subsection: Other Methods 2</i>			
Submitter No. 12	Heritage Expeditions Limited			
Other Methods 2	<i>Neutral</i> Other Methods 2 suggests that guidelines could be used as a means to manage artificial light and noise. An explanation of when guidelines are appropriate would be useful. By implication, guidelines could be developed for management of issues that are adequately managed through voluntary compliance or where this is a pragmatic management approach.		The proposed plan suggests use of guidelines to encourage avoidance of adverse effects of noise and light because absolute limits are neither practical nor would they be easily enforceable. If guidelines are developed it is anticipated that they would apply at all times and their development would build on current best practice. Any guidelines for noise and light would have to be pragmatic, and would need to take account of noise associated with the normal running of a vessel and light necessary for both health and safety and navigational purposes.	
Submitter No. 5	New Zealand Seafood Industry Council Limited			<i>Accept in part</i>
Rule 13.	<i>Oppose in Part</i> Discharges of contaminants from ships are regulated under the Resource Management (Marine Pollution) Regulations 1998. The rules should be clear on this point.	Amend rule 13 to include: "other than from ships..."	As with the submission on rule 12, Note 1, under the title "Discharges", explains that discharges from ships and offshore installations are regulated by the Resource Management (Marine Pollution) Regulations 1998. It is proposed to clarify in Note 1 that such activities authorised by the marine pollution regulations are exempt from the rules of the coastal plan, unless the regulations specifically deem them to be discretionary activities in a regional coastal plan.	Refer to decisions and reasons in response to Talley's submission on rules 12 and 13.
Submitter No. 15	Minister of Conservation			<i>Accept</i>
Rule 10	<i>Support</i> The activity description is incomplete and unclear. It should be amended to accurately reflect section 70 RMA.	Reword the activity description of Rule 10 to read: "Discharge of uncontaminated water or storm water into water or onto land the coastal marine area"	The rule is unclear while the activity description is incomplete. Amend the activity description of Rule 10 to read: "Discharge of uncontaminated water or storm water into water or onto land the coastal marine area"	Refer to the officer's reasons which are adopted. Changes required: Amend the activity description of Rule 10 to read: "Discharge of uncontaminated water or storm water into water or onto land the coastal marine area"
Submitter No. 5	New Zealand Seafood Industry Council Limited			<i>Accept in part</i>
Rule 12	<i>Oppose in Part</i> Discharge of untreated sewage. SeaFIC presumes this rule does not apply to discharge of untreated sewage into water from ships. The discharge of untreated sewage from ships is regulated under the Resource Management (Marine Pollution) Regulations 1998.	Amend rule 12 to include the words "...other than from ships, ..."	Note 1, under the title "Discharges", explains that discharges from ships and offshore installations are regulated by the Resource Management (Marine Pollution) Regulations 1998. It is proposed to clarify in Note 1 that such activities authorised by the marine pollution regulations are exempt from the rules of the coastal plan, unless the regulations specifically deem them to be discretionary activities in a regional coastal plan.	Refer to decisions and reasons in response to Sanford's submission on rules 12 and 13, and Talley's submission on rule 12.
Submitter No. 15	Minister of Conservation			<i>Accept</i>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Rule 12	<i>Support</i> This rule prohibits the discharge of untreated sewage and refers to policies 14 and 15. Policy 15 however, acknowledges a discharge of untreated sewage from Campbell Island, and seeks to allow this discharge to continue for a period of 5 years from the plan becoming operative while solutions to deal with it are investigated and implemented. An interim rule needs to be included to allow the intermittent discharge to continue for 5 years from the date the plan becomes operative.	Include a new rule after rule 11 to allow the current intermittent discharge of untreated sewage from the toilet on Campbell Island for a period of 5 years from the date the plan becomes operative as a permitted activity.	Rule 12 does not provide for the continuation of this intermittent discharge. An interim rule needs to be included between rules 11 and 12 as follows: to allow for the discharge continue for 5 years from the date the plan becomes operative. Activity description to read: "Discharge of untreated sewage into water or onto land in the coastal marine area of Campbell Island." The Standards/Terms/Conditions to read: "The discharge of untreated sewage until 5 years after the date this plan becomes operative." Classification to read: "Permitted".	Refer to the officer's reasons which are adopted. Changes required: Include new rule in between existing rules 11 and 12 as follows: Activity description to read: "Discharge of untreated sewage into water or onto land in the coastal marine area of Campbell Island." The Standards/Terms/Conditions to read: "The discharge of untreated sewage until 5 years after the date this plan becomes operative." Classification to read: "Permitted".
Submitter No. 8 Rule 13	Royal Forest and Bird Protection Society of New Zealand Incorporated <i>Support in Part</i> Discharges into the Kermadec and Subantarctic Islands environment could potentially cause adverse environmental effects. The discretionary status of rule 13 does not provide adequate protection to the coastal marine area.	The activity status of rule 13 is changed from discretionary to non-complying.	Discretionary status is adequate to allow each proposal to be considered on a case by case basis, and declined if the potential adverse effects are found to be unacceptable.	<i>Reject</i> Refer to the officer's reasons which are adopted.
Submitter No. 3 Rules 10 to 13 and notes 1 and 2.	New Zealand Historic Places Trust <i>Support</i> The NZHPT supports of the inclusion of note 1 in the section of rules controlling discharges.	No change		
Submitter No. 4 Rules 12 and 13	Talleys Group Limited <i>Oppose in Part</i> Discharges of contaminants from ships are regulated under the Resource Management (Marine Pollution) Regulations 1998. The rules should be clear on this point. [Refer submission on policy 16, which refers to discharges of contaminants to water and air - for the avoidance of doubt, policy 16 and the rules relating to discharges should be referenced as other than from ships].	Amend rules 12 and 13 to include: "other than from ships..."	Note 1, under the title "Discharges", explains that discharges from ships and offshore installations are regulated by the Resource Management (Marine Pollution) Regulations 1998. It is proposed to clarify in Note 1 that such activities authorised by the marine pollution regulations are exempt from the rules of the coastal plan, unless the regulations specifically deem them to be discretionary activities in a regional coastal plan.	<i>Accept in part</i> Refer to the reasons provided by the officer which are adopted. Change required: "Activities authorised by the Marine Pollution Regulations are exempt from the rules of the regional coastal plan, unless the regulations specifically deem to be a discretionary activity in a regional coastal plan."

Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
Rules 12 and 13	<i>Support in Part</i> The NZHPT does not object to the intent of the proposed changes sought to these rules, which			<i>Accept</i>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
	<p>is to make clear that discharges of contaminants from ships are regulated under the Resource Management (Marine Pollution) Regulations 1998. However, if the requested change to rules 12 and 13 is made, it is considered that it is important to retain Note 1 which more fully and accurately describes the range of discharges controlled under these regulations.</p>			
<p>Submitter No. 6 Rules 12 and 13</p>	<p>Sanford Limited</p> <p><i>Oppose</i></p> <p>The proposed plan and section 32 report are unclear as to how fish waste discharged into water is provided for. The lawful harvesting of fish is a permitted and legitimate activity in parts of this water space (with the exception of Auckland Islands out to 12nM), and is provided for by the New Zealand Coastal Policy Statement. The Fisheries Act defines fishing as the catching, taking and harvesting of fish and any activities in support of and preparation for. This includes the disposing of fish waste. The proposed plan prohibits the discharge of untreated sewage into the coastal marine area (out to 12nM). Currently the RMA (Marine Pollution) Regulations allow vessels to dispose of their untreated sewage in the coastal space seaward 0.27 nautical miles (500 meters) from MHWS to 12 nautical miles in depths greater than 5 meters and beyond 200m of marine reserves . The proposed rule in this Plan has not been justified in terms of s32(3)(a).</p>	<p>(i) Insert new rule which reads, ‘activities associated with fishing is permitted’. (ii)Delete Rule12</p>	<p>Note 1, under the title "Discharges", explains that discharges from ships and offshore installations are regulated by the Resource Management (Marine Pollution) Regulations 1998. It is proposed to clarify in Note 1 that such activities authorised by the marine pollution regulations are exempt from the rules of the coastal plan, unless the regulations specifically deem them to be discretionary activities in a regional coastal plan. Rule 12 gives effect to the New Zealand Coastal Policy Statement policy 23(2). The plan has jurisdiction to manage potential adverse effects of fishing activities under RMA section 30(1)(d), but not to control the harvesting or enhancement of aquatic organisms for the purpose of conserving, using, enhancing, or developing any fisheries resources controlled under the Fisheries Act 1996 (RMA section 30(3)).</p>	<p><i>Reject</i></p> <p>The regulations stipulate what activities are permitted, deemed to be discretionary activities in regional coastal plans or prohibited. For example, the activities that fit within the definition of normal ships operations as listed in Schedule 4 of the regulations are permitted activities. The regulations also allow councils, and in this case the Minister of Conservation, to impose stricter rules than the regulations in relation to discharges of treated sewage (clause 11(3) of the regulations).</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
------------	------------	---------------	--------------------------	-------------------------

Plan Section *Shipwreck rules Subsection: Rule 14*

Submitter No. 3	New Zealand Historic Places Trust			<i>Accept in part</i>
Rule 14	<i>Support</i> The NZHPT recommends a further standard/term/condition to be included in Rule 14, in addition to the standard/term/condition "The primary purpose of recovery of material is for research and scientific investigation of archaeological shipwreck deposits" requiring that: "All salvage, removal or demolition of registered or listed ship wrecks is recorded in detail by any or all of the following means: photographic record; written record; identification at or near the site by use of an aluminium rod and archaeological investigation and recording to accepted professional standards."	Include the following as a further standard/term/condition in Rule 14: All salvage, removal or demolition of registered or listed ship wrecks is recorded in detail by any or all of the following means: photographic record; written record; identification at or near the site by use of an aluminium rod and archaeological investigation and recording to accepted professional standards.	The additional standard/term/condition requested to be included in rule 14 is not necessary. Rule 14 is a discretionary activity and the policies of Issue 3 will apply when considering coastal permit applications for such activities. Policy 42 already contains the requirements for recording the details of the site as requested in NZHPT's submission. This could be clarified, however, by including the words "including shipwreck salvage" after the words "details of any site" in policy 42.	Refer to the officer's reasons which are adopted. Amend policy 42 to include the words "including shipwreck salvage" after the words "details of any site".

Submitter No. 4	Talleys Group Limited			<i>Reject</i>
Rule 14	<i>Oppose</i> In the exceedingly low probability of a future ship wreck normal procedures for salvage and reduction of contamination risk should apply without any need for resource consent. The proposed plan should make a clear distinction between historic ship wrecks of cultural and heritage significance and future ship wrecks.	Amend the shipwreck rules, namely rule 14, to allow normal procedures for salvage, and reduction of contamination risk, to apply without any need for resource consent.	The shipwreck rule 14 provides for salvage, removal or demolition of a ship wreck where necessary to avoid navigation safety risk, to avoid the risk of discharge of a contaminant (such as fuel) and provided the wreck is no more than 50 years old. The latter distinguishes contemporary wrecks from wrecks of cultural of historic heritage. Where rule 14 applies in the event the vessel owners of a wreck wish to salvage it, rule 25 would apply in circumstances where a vessel owner is not proactive about dealing with a wreck. The rule would apply retrospectively and allow the imposition of conditions to remedy adverse effects of a wreck. This Minister's interest in contemporary wrecks is of potential adverse effects on the environment, not vessel owner, operator, salvager and insurance implications.	As noted by the officer, the concern is the potential adverse effects on the environment. In such high value areas the ability to place conditions on a discretionary consent is warranted.

	heritage significance and future ship wrecks.		owners of a wreck wish to salvage it, rule 25 would apply in circumstances where a vessel owner is not proactive about dealing with a wreck. The rule would apply retrospectively and allow the imposition of conditions to remedy adverse effects of a wreck. This Minister's interest in contemporary wrecks is of potential adverse effects on the environment, not vessel owner, operator, salvager and insurance implications.	
Submitter No. 9 Andy Dodd Rules 13 to 16	<i>Support</i> Support these rules as they give additional protection for historic shipwrecks while still providing for appropriate scientific research and allowing for salvage of modern wreck.	No change.		
Submitter No. 6 Sanford Limited Rules 14, 15 and 16	<i>Oppose</i> Refer to our submissions on Rules 24 and 25 and definition of ship wreck.	Amend the rule to require a Certificate of Completion.	As noted in the response to Sanford's submission on rule 25, the shipwreck rule 14 provides for salvage, removal or demolition of a ship wreck where necessary to avoid navigation safety risk, to avoid the risk of discharge of a contaminant (such as fuel) and provided the wreck is no more than 50 years old. The latter distinguishes contemporary wrecks from wrecks of cultural or historic heritage. Where rule 14 applies in the event the vessel owners of a wreck wish to salvage it, rule 25 would apply in circumstances where a vessel owner is not proactive about dealing with a wreck. The rule would apply retrospectively and allow the imposition of conditions to remedy adverse effects of a wreck. This Minister's interest in contemporary wrecks is of potential adverse effects on the environment, not vessel owner, operator, salvager and insurance implications. In the case of future shipwrecks the rule won't apply where there is a defence in terms of sections 341 or 341B of the RMA.	<i>Reject</i> Refer to reasons in response to Sanford's submission on rule 25

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section <i>Disturbance rules Subsection: Rules 17 and 18</i>				
Submitter No. 6 Rules 17 and 18	Sanford Limited <i>Oppose</i> Include a new rule [before or after rules Rule 17 and 18] or clarify that legal fishing activities including the activity of anchoring as part of the fishing activity is provided for as permitted activity.	Provide for fishing as part of the permitted activity status.	Section 30(3) of the RMA indicates that regional coastal plans cannot control the harvesting of aquatic organisms controlled under the Fisheries Act therefore it is not appropriate for "fishing" to be addressed as an activity in the proposed plan - only the effects of fishing can be addressed. With respect to anchoring, no amendment necessary. The adverse effects of disturbance to seabed are considered to be of such small scale as to be de minimis.	<i>Reject</i> Refer to the officer's reasons which are adopted.
Further subs				
38 New Zealand Marine Sciences Society				
Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
Rules 17 and 18	<i>Oppose</i> Section 30(3) of the RMA indicates that regional coastal plans cannot control the harvesting of aquatic organisms controlled under the Fisheries Act and so it is not appropriate for "fishing" to be specified as a permitted activity. Also given the natural character provisions in the New Zealand Coastal Policy Statement (as well as the current and upcoming marine protection provisions applying to much of the marine environment covered by this plan) it is not appropriate for fishing to have general permitted activity status.		In addition to the point raised by NZMSS, it is noted that with respect to anchoring, no amendment necessary. The adverse effects of disturbance to seabed are considered to be of such small scale as to be de minimis.	<i>Accept</i> Refer to the officer's reasons which are adopted.
Submitter No. 8 Rules 17 and 18	Royal Forest and Bird Protection Society of New Zealand Incorporated <i>Oppose in Part</i> Rules 17 and 18 are confusing. The only difference is that rule 17 refers to the foreshore and seabed and rule 18 refers only to the seabed. Both of the rules have two different sets of standards/terms/conditions.	Clarify the difference between rules 17 and 18.	Rule 18 also has distance limits of "...more than 300m from MHWS and 100m deep" - hence why the word "foreshore" is omitted. Both rules 17 and 18 are to allow minor disturbance associated with research. Within the foreshore area (i.e. out to 300m) the area of disturbance allowed is smaller than offshore (beyond 300m from MHWS).	<i>Reject</i> Refer to the officer's reasons which are adopted.
Submitter No. 3 Rules 17 to 20	New Zealand Historic Places Trust <i>Support</i> The NZHPT supports the rules and the Standards/Terms/Conditions included in the rules but considers a further advice note is needed that reminds people that they may also need an archaeological authority for disturbance, damage or destruction of the seabed.	Add the following note: "Archaeological sites associated with human activity that occurred before 1900 are protected by the Historic Places Act 1993. An archaeological authority will be required from the New Zealand Historic Places Trust to destroy, damage or modify these sites."	To assist users of the plan.	<i>Accept</i> The requested note would assist users of the plan. Under Note 1 above the table containing the Disturbance rules, rules 17 to 20, add "Note 2: Archaeological sites associated with human activity that occurred before 1900 are protected by the Historic Places Act 1993. An archaeological authority will be required from the New Zealand Historic Places Trust to destroy, damage or modify these sites."

	able to continue to do so.			

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section <i>Harmful or invasive species rule Subsection: Rule 23</i>				
Submitter No. 4 Rule 23	Talleys Group Limited <i>Oppose</i> The rule is not necessary - the activity is already covered by policies and rules requiring above waterline checks and hull and niche area checks that other submissions recommend should be dealt with via guidelines. It is also noted that with the exception of the Snares Islands, the waters within most of the Territorial Seas are either existing or likely to be created marine reserves through special legislation. The Marine Reserves Act makes it an offence to introduce any living organism into a marine reserve and therefore this rule is likely to b redundant for most areas.	Remove rule 23.	<p>Not all of the coastal marine area of the islands are intended to have marine reserves established. Regardless, the provisions of the proposed regional coastal plan will apply in addition to the restrictions imposed under the Marine Reserves Act 1971 for those areas that are marine reserves - refer discussion under general comment regarding delaying the progression of the proposed plan until the new marine reserves are established.</p> <p>The Department has undertaken extensive and costly eradication programmes in the islands in the past, and has an ongoing work programme to maintain those where eradications have taken place, and under further eradications on remaining pests as funding permits. None of the islands (Subantarctic and Kermadecs) have rats, they have been successfully eradicated. While it is important to protect the past investment in eradications it is about protecting these valuable but not pristine islands from further damage. In fact the islands that have not had eradications done, like Snares and Adams, are often even more vulnerable/valuable than the ones we have successfully eradicated. All the Islands are nature reserves and the Subantarctic Islands are also national reserves and have World Heritage status to the outer limits of the territorial sea. All of the Kermadecs and the Auckland Islands are full marine to the outer limits of the territorial sea. The NZ government has sent a clear signal how it values the Subantarctic Islands recently with the announcement of its intention to create further extensive marine reserves around the Campbell, Bountys and Antipodes Islands by special legislation, before the end of the year. It would be contrary to achieving the purpose of the RMA, inconsistent with policy 12 of the New Zealand Coastal Policy Statement 2010 and contrary to the Minister's International obligations given their World Heritage status if the Minister did not strive to reduce the risk of introducing harmful organisms to all the islands and their marine environments. It is also cost effective to avoid introductions in the first instance than to attempt costly eradications.</p>	<i>Reject</i> Refer to decision and reasons given in response to Sanford's submission on the hull fouling rule 26.
Submitter No. 5 Rule 23	New Zealand Seafood Industry Council Limited <i>Oppose</i> The rule is not necessary - the activity is already covered by policies and rules requiring above waterline checks and hull and niche area checks that other submissions recommend should be dealt with via guidelines. It is also noted that with the exception of the Snares Islands, the waters within most of the Territorial Seas are either existing or likely to be created marine reserves through special legislation. The Marine Reserves Act makes it	Remove rule 23	<p>Not all of the coastal marine area of the islands are intended to have marine reserves established. It would be contrary to achieving the purpose of the RMA, inconsistent with policy 12 of the New Zealand Coastal Policy Statement 2010 and contrary to the Minister's International obligations given their World Heritage status if the Minister did not strive to reduce the risk of introducing harmful organisms to all the islands and their marine environments. It is also cost effective to avoid introductions in the first instance than to attempt costly eradications.	<i>Reject</i> Refer to the officer's reasons which are adopted.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section <i>Deposition rules Subsection: Rule 24</i>				
Submitter No. 4	Talleys Group Limited	Remove rule 24.	It is agreed that cleaning of ships and offshore installations are regulated by the Resource Management (Marine Pollution) Regulations 1998. Regulation 15 "Discharges made as part of normal operations of ship or offshore installation" states that "Any person may discharge, in the coastal marine area, a contaminant that is incidental to, or derived from, or generated during, the operations listed in Schedule 4 as the normal operations of a ship" Schedule 4 No. 5 states "The cleaning of the ship or offshore installation, except for the exterior of the hull below the load line or parts of the ship used for carrying cargo." Clearly the cleaning activity that this submission refers to above the water line is a permitted activity under the Marine Pollution Regulations, however hull cleaning is explicitly excluded and would come under the description of regulation 4(2)(f) "Deposit of organic materials of natural origin". Refer the submission from the Minister of Conservation on rule 24 (submission point no.10, page 6). That submission requests amending rule 24 to change the status from prohibited to discretionary and to add a footnote referring plan users to regulation 4(2)(f) of the Resource Management (Marine Pollution) Regulations 1998. In addition, it is proposed to amend the note under the title "Deposition" to clearly articulate the exemption of discharges as a result of normal operations of ship or offshore installation.	<i>Accept in part</i> Changes required: Delete the classification "Prohibited" in rule 24 and replace with "Discretionary" Add a footnote to the end of the activity description of rule 24 as follows: "Refer to regulation 4(2)(f) of the Resource Management (Marine Pollution) Regulations 1998".
Rule 24	<i>Oppose</i> Rule 24 should be removed. Rule 24 prohibits the deposit of a substance from the scraping and/or cleaning of a ship (whether above or below the water surface). Fishing vessels are regularly cleaned above the water surface including decks for hygiene and safety purposes. The Resource Management (Marine Pollution) Regulations 1998 allow for discharge of materials from the cleaning of ships except the exterior of the hull below the load line or parts of the ship used for carrying cargo.			
Submitter No. 5	New Zealand Seafood Industry Council Limited	Remove rule 24.	It is agreed that cleaning of ships and offshore installations are regulated by the Resource Management (Marine Pollution) Regulations 1998. Regulation 15 "Discharges made as part of normal operations of ship or offshore installation" states that "Any person may discharge, in the coastal marine area, a contaminant that is incidental to, or derived from, or generated during, the operations listed in Schedule 4 as the normal operations of a ship" Schedule 4 No. 5 states "The cleaning of the ship or offshore installation, except for the exterior of the hull below the load line or parts of the ship used for carrying cargo." Clearly the cleaning activity that SeaFICs submission refers to above the water line is a permitted activity under the Marine Pollution Regulations, however hull cleaning is explicitly excluded and would come under the description of regulation 4(2)(f) "Deposit of organic materials of natural origin". Refer the submission from the Minister of Conservation on rule 24 (submission point no.10, page 6). That submission requests amending rule 24 to change the status from prohibited to discretionary and to add a footnote to the activity description as follows "Regulation 4(2)(f) of the Resource Management (Marine Pollution) Regulations 1998". In addition, it is proposed to amend the note under the title "Deposition"	<i>Accept in part</i> Changes required: Delete the classification "Prohibited" in rule 24 and replace with "Discretionary" Add a footnote to the end of the activity description of rule 24 as follows: "Refer to regulation 4(2)(f) of the Resource Management (Marine Pollution) Regulations 1998".
Rule 24	<i>Oppose</i> Rule 24 should be removed. Rule 24 prohibits the deposit of a substance from the scraping and/or cleaning of a ship (whether above or below the water surface). Fishing vessels are regularly cleaned above the water surface including decks for hygiene and safety purposes. The Resource Management (Marine Pollution) Regulations 1998 allow for discharge of materials from the cleaning of ships except the exterior of the hull below the load line or parts of the ship used for carrying cargo.			

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Submitter No. 6 Rule 24	Sanford Limited <i>Oppose</i> The RMA (Marine Pollution) Regulations Schedule 4 provide for the normal operations of a ship.	Amend rule so that it does not apply to the normal operation of a fishing vessel or fishing activity.	by adding the following sentence: "Discharges as a result of normal operations of ship or offshore installation are permitted activities - refer regulation 15, Part 3 of the Resource Management (Marine Pollution) Regulations 1998." It is agreed that cleaning of ships and offshore installations are regulated by the Resource Management (Marine Pollution) Regulations 1998. Regulation 15 "Discharges made as part of normal operations of ship or offshore installation" states that "Any person may discharge, in the coastal marine area, a contaminant that is incidental to, or derived from, or generated during, the operations listed in Schedule 4 as the normal operations of a ship" Schedule 4 No. 5 states "The cleaning of the ship or offshore installation, except for the exterior of the hull below the load line or parts of the ship used for carrying cargo." Clearly cleaning activity above the water line is a permitted activity under the Marine Pollution Regulations, however hull cleaning is explicitly excluded and would come under the description of regulation 4(2)(f) "Deposit of organic materials of natural origin". Refer the submission from the Minister of Conservation on rule 24 (submission point no.10, page 6). That submission requests amending rule 24 to change the status from prohibited to discretionary and to add a footnote referring plan users to regulation 4(2)(f) of the Resource Management (Marine Pollution) Regulations 1998. In addition, it is proposed to amend the note under the title "Deposition" to clearly articulate the exemption of discharges as a result of normal operations of ship or offshore installation.	<i>Accept</i> Changes required: Delete the classification "Prohibited" in rule 24 and replace with "Discretionary" Add a footnote to the end of the activity description of rule 24 as follows: "Refer to regulation 4(2)(f) of the Resource Management (Marine Pollution) Regulations 1998".
Submitter No. 15 Rule 24	Minister of Conservation <i>Support</i> The activity described in the rule cannot be classified as a prohibited activity. In the case Nelson City Council v. Diamond Netherlands BV 2009 (CRN08042500436) Judge Dwyer found that hull cleaning activities are deemed to be discretionary activities in regional coastal plans by regulation 4 of the Resource Management Marine Pollution Regulations 1998.	Change the classification from prohibited to discretionary and add a footnote to the activity description that refers to regulation 4(2)(f) of the Resource Management (Marine Pollution) Regulations 1998.	The activity of hull cleaning is regulated by the Resource Management (Marine Pollution) Regulations 1998. The activity of hull cleaning comes under the description of regulation 4(2)(f) "Deposit of organic materials of natural origin". Rule 24 should be amended to change the status from prohibited to discretionary and to add a footnote to the activity description as follows "Regulation 4(2)(f) of the Resource Management (Marine Pollution) Regulations ". Refer to the submission from the New Zealand Seafood Industry Council on rule 24.	<i>Accept</i> Refer to the decision, reasons and changes in response to the submission from the New Zealand Seafood Industry Council on rule 24.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section <i>Temporary rules for hull and niche area fouling Subsection: Rule A</i>				
Submitter No. 6	Sanford Limited			<i>Reject</i>
Rule A	<p><i>Oppose</i></p> <p>The rule is difficult to read and confusing. Fishing vessels working in this area are often away from New Zealand for extended periods. It is noted that in the s32 report, page 41, Floerl et al 2010 says, that the age of antifouling paint on a vessel's hull is the best known predictor for biofouling and the presence of harmful species. The requirement to not leave New Zealand waters is also unnecessary and fails to take into account established High Sea transit routes such as around Macquarie Islands. While boats are steaming, there is minimal chance of hull fouling. It is unclear how a fishing company, which has multiple vessels operating in an area, is expected to comply with the permitted/discretionary rules ie can vessels be grouped together in the one consent process? The fishing industry is already extensively regulated; any new compliance requirements must add more benefit than cost. Not enough consideration in the s32 report has been given to the option of taking no action. Rule A is an unnecessarily laying of new regulation onto existing rules prescribed in other law. Sanford is opposed to listing at the back of the plan the accredited divers, which will change over time. We propose including criteria/process needed to become certified. Retain (with amendments) the intent of this rule for managing vessels that intend to land. Delete requirement for a dive inspection. Extend the rule for the operative life of the plan and remove Rule 26, which was intended to come into effect one year after the plan is operative. Retain the voluntary nature of this rule for vessels not intending to land, but which are anchoring, transiting through the coastal marine area or seeking shelter.</p>	<p>Delete the rule in its entirety, or retain for those vessels that intend to land.</p> <p>(i) Amend this rule so that it reads; 'Access to the coastal marine area of the Kermadec and/or Subantarctic Islands by vessels intending to land; and</p> <p>(ii) amend documentation requirement so that it reads, 'within two weeks of departure to the Southern Ocean area';</p> <p>(iii) delete requirement for a dive inspection; and,</p> <p>(iv) include at the back of the Coastal Plan criteria/process used to achieve diver accreditation.</p> <p>(v) delete 4 bullets which relate to exemptions for vessels which have been more than 48 hours outside New Zealand waters.</p> <p>(vi) delete the second requirement to provide documentation to the relevant Department of Conservation area.</p> <p>(vii) delete the requirement to ensure that the vessel is free of insects.</p> <p>(viii) introduce guidelines for vessels travelling in the coastal marine area but which do not intend to land.</p>	<p>Rule A and rule 26 are difficult to follow. It is recommended to include a flow chart in the plan that explains the sequence of steps and tests contained in the rules. The first requirement of rules A and 26 requires evidence that the vessel has an anti-fouling system applied in accordance with the manufacturers instructions and will be within the manufacturer's timeframe for effectiveness to be provided in advance, not within a 2 week time frame (which implies it could be provided after a vessel has departed).</p> <p>There is no reason why a company such as Sanford with multiple vessels could not apply for a single consent for more than one vessel at a time. However, depending on what the consent was for, they are likely to need to be assessed on a vessel by vessel basis.</p> <p>The suggestion of restricting the hull and niche area biosecurity rules to vessels intending to land is not supported. All vessels that go close into shore are a biosecurity risk. The scampi fishing vessels that use the inshore waters around Auckland Island for shelter but do not land generally go closer into shore, and remain in the one location for longer periods of time (can be up to 3 or 4 weeks) than any other users of the inshore waters around the islands and represent a significant biosecurity risk.</p> <p>The option of do nothing is not considered a viable option to address such a key issue for the plan. Neither is guidelines considered adequate to provide enough assurance of protection of such high value areas. There is a risk to the Minister of not fulfilling her obligation to achieve the purpose of the RMA - sustainable management of the natural and physical resources of the islands - if she were to do nothing or use guidelines to address the key issues. She also has an international obligation given the World Heritage status for the Subantarctic Islands. The NZ government has sent a clear signal how it values the Subantarctic Islands recently with the announcement of its intention to create further extensive marine reserves around the Campbell, Bountys and Antipodes Islands by special legislation, before the end of the year. It is consistent with RMA coastal planning practice around New Zealand to impose stricter rules for high value areas.</p> <p>Other submitters (Talleys and SeaFIC) suggested an alternative approach could be considered (as an alternative option rather than a replacement). It is agreed that good vessel hygiene is key to minimising marine biosecurity risk. It is recommended that an alternative option be included that allows a vessel exemption from the in-water inspections if the vessels anti-fouling is less than 6 months old for the duration of the time that the vessel is in the coastal marine area of</p>	<p>Refer to the decision and reasons response to Sanford's submission on rule 26.</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
			<p>the islands. The alternative option could be included as a part of rule 26, under the Standards/Terms/Conditions below the bold words "And either:" to be worded as follows:</p> <p>"The vessels anti-fouling is less than 6 months old for the duration of the time that the vessel is in the coastal marine area of the islands".</p> <p>There is no intention to list "Approved diver service providers" in the back of the plan. They will be listed on DOCs website to enable easy updating. The website will also include the approval criteria as follows: Divers must fulfil the requirements laid down in the H&S in Employment Regulations 1995. In particular they must hold a current certificate of competence for the category of diving required (Part III, 27) and meet the 'requirements of diver' (Part III, 32). All inspection work and cleaning are defined in the Regulations as "Construction Work".</p> <p>As noted in response to other submissions, it is recommended that the condition in the rules be re-worded to read: "Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators knowledge is free of harmful plants and animals (including insects)", that Policy 2 be similarly amended (for consistency); and insert a section for "Other methods" after policy 6 and include a method that states the Department, in consultation with industry, will develop guidelines for undertaking biosecurity checks of the dry areas of vessels.</p> <p>To take into account established High Sea transit routes such as around Macquarie island, a further bullet point should be added to the bullet point list of conditions that need to be met for the in-water inspection to be valid for 3 months that allows a vessel to leave NZ waters on route to the islands, provided it does not visit any land.</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section <i>Controls on hull and niche area fouling rules Subsection: Rule 26</i>				
Submitter No. 6 Rule 26	Sanford Limited <i>Oppose</i> The difference between this rule and Rule A is the opportunity of a second inspection if the initial dive inspection failed within the scope of the permitted activity. Notwithstanding our submission above, seeking the removal of the dive inspection, the section 32 does not explain why re-inspection is not a valid expectation of a permitted activity.	Delete this rule in its entirety.	Rule A is a voluntary approach was included in the proposed plan to allow a lead in time for vessels. If a vessel fails an in-water inspection under rule A and undertakes an independent risk assessment as per the recommendations of the NIWA report 2010 and that assessment identifies a there is a risk, the Minister has no ability to prevent the vessel from travelling to the islands irrespective of the risk identified. The voluntary approach in Rule A relies on the vessel operator "doing the right thing". If the in-water inspection in Rule 26 (or 27 for yachts) is failed, rule 28 requires a discretionary coastal permit to be applied for, which allows the Minister to decline access inside 1000 metres of MHWS based on the level of risk the independent risk assessment identifies. As noted, the risk of biosecurity breach is a key issue for the proposed plan. A voluntary approach is not considered to provide enough assurance of protection of such high value areas. The consultation document released by MAF Biosecurity New Zealand during the development of the draft Import Health Standard for Biofouling acknowledges that New Zealand's high values areas such as the Subantarctic Islands warrant special inspection and treatment processes (MAF BNZ Consultation paper 10/04 May 2010, paragraph 58). It is consistent with RMA coastal planning practice around New Zealand to impose stricter rules for high value areas.	<p><i>Reject</i></p> <p>The alternative regime of a permitted activity provision that hinges on the length of the anti-foulant manufacturer's recommendation has the attraction of simplicity. However, it carries the potential problems of some degree of a leap of faith into the arms of various manufacturers, some of whom may be presently unknown and/or overseas enterprises, but more importantly introducing an element of uncertainty vis-à-vis a defined standard.</p> <p>The officers produced another regime, softened from the rigour of the protection in the proposed plan provisions, that significantly reduced that uncertainty, but undoubtedly results in a provision that is quite complex. It could best be described as a series of cascading hoops through which a proposed vessel trip must successfully step to achieve permitted activity status.</p> <p>Thus the issue (at least as to overall approach) becomes one of weighing the respective benefits of a provision that is superior in its simplicity, but carries some potential uncertainty issues, as against a provision that is more complex, but at least does state defined standards.</p> <p>Given the sensitivity of the receiving environment, plus the abovementioned potential difficulty and uncertainty of hinging permitted activity standards to external manufacturer's recommendations, the latter but more complex approach is to be preferred. Complexity alone should not defeat the adoption of such a provision if it enables readers of the plan to ascertain with certainty at the end of the day the standards that need to be achieved for permitted activity status, or otherwise.</p> <p>There will be costs associated with compliance. However, with its series of cascading hoops the regime provides a structure that keeps costs down for those who demonstrate clean hull and niche areas by passing the diver inspection. For those that cannot comply costs will increase, either by the cost of science and taxonomic advice involved in having a risk assessment, or in the worst case scenario of having to dry dock and clean. Figures provided by Sanford for the scampi fleet estimate the average cost of the in-water inspection as \$1500, where as a cost to dry dock the vessel would jump to \$15,500.</p> <p>Despite these costs, the regime is still considered effective and appropriate when compared with the costs of a harmful organism becoming</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
				<p>established in such high value areas.</p> <p>However, while that settles the broad approach, that does not dispose of all issues on this provision. Sanford went on to identify several aspects within the detailed standards of the officers' proposal that it considered would need to be ameliorated to make it workable.</p> <p>A number of these have been upheld. Self-inspection for harmful organisms above the water line should be a guideline rather than a permitted activity standard. This latter point would apply to all the surface water activity rules as well as the rules controlling hull and niche area fouling.</p> <p>Changes required: Replace the standards/terms/conditions in rules A and 26 with the following:</p> <p>For Rule A: Vessels Must Satisfy PART ONE, and then one of PARTS TWO, THREE or FOUR.</p> <p>PART ONE Documentation demonstrating that the vessel has an anti-fouling system that has been applied in accordance with the manufacturer's instructions, and will be within the manufacturer's timeframe of effectiveness for the time period the vessel remains within 1000 metres of MHWS of the islands is provided to the Department of Conservation Area Manager EITHER:</p> <ul style="list-style-type: none"> • at least 1 week prior to access within 1000 metres from MHWS of the islands; <p>OR</p> <ul style="list-style-type: none"> • an itinerary of intended trips for a defined period of time not exceeding 12 months is provided at the beginning of the period of time specified; and • An email or facsimile is sent to the Department of Conservation no more than 1 week prior to departure for the coastal marine area of the Islands notifying the Department of intended departure <p>OR</p> <ul style="list-style-type: none"> • In circumstances where a company has a fleet of vessels that undertake multiple trips in a calendar year, on or before 1 July each year, and details of trip dates and duration that vessels were inside 1000m seaward of MHWS are to be supplied to the Department of Conservation annually, when requested by the Department <p>PART TWO Provided that, since its last certification of a clean hull and niche areas:</p> <ul style="list-style-type: none"> o The vessel has not entered another nations Territorial Sea; OR o IF the vessel has returned directly from

				Then: <ul style="list-style-type: none"> The vessel must have a certified clean hull and niche areas by diver inspection completed by a dive service provider approved by the Minister of Conservation, using the form included in Appendix 4, is provided to the Department of Conservation Area Manager before access inside 1000m from MHWS; and If the dive inspection shows visible fouling on the hull beyond a slime layer, that fouling is able to be removed from the vessel in accordance with any requirements of the regional coastal plan relevant to the site of removal, the inspection can be completed.
Submitter No. 15	Minister of Conservation			<i>Accept</i>
Rule A and permitted activity rules between 26 to 58	<i>Support</i> In relation to the biosecurity condition that reads: "Vessel has been thoroughly checked for harmful organisms above the waterline and is free of harmful plants and animals (including insects)" it is noted that rats can live above the waterline and also below the waterline such as within the hull of a vessel. The rule should ensure the inside of the vessel, including below the waterline, is also checked.	Reword the condition concerning biosecurity of the dry parts of the vessel in Rule A and all permitted activity rules between 26 to 58, pages 42-51 to read: "The vessel has been checked for harmful organisms above the waterline, inside and outside and within the hull and is free of harmful plants and animals (including insects)."	It is recommended that the condition in the rules be reworded to read: "Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators knowledge is free of harmful plants and animals (including insects)", that Policy 2 be similarly amended for consistency; and insert a section for "Other methods" after policy 6 and include a method that states the Department, in consultation with industry, will develop guidelines for undertaking biosecurity checks of the dry areas of vessels.	Refer to the decision, reasons and changes in response to Sanford's submission on rule 26 'Controls on hull and niche area fouling'.
Submitter No. 8	Royal Forest and Bird Protection Society of New Zealand Incorporated			<i>Reject</i>
Rules 26 to 28	<i>Support</i> While the application of rules 26 to 28 is supported, the biosecurity risk from vessels coming from the Pacific Islands where none of these measures have been implemented remains.	Include a new rule prohibiting vessels from transiting through the Kermadec Islands from the Pacific.	The plan cannot prohibit vessels from transiting through the Kermadec Islands from the Pacific beyond the rules restricting access close into shore. Such vessels do have to comply with the rules of the plan, which means unless they comply with rules A and B and 26 to 28 they cannot go closer than 1000 metres from MHWS. Further, the department has been liaising closely with Customs New Zealand, who would also prefer vessels not to call into the Kermadec Islands in transit.	Refer to the officer's reasons which are adopted.

	mass illegally without a permit. This proposed rule relates to avoiding the activity not avoiding the adverse effects and non enforcement of existing DOC requirements. The plan already includes comprehensive policies and rules that relate to biosecurity matters. Furthermore prohibition on transit creates safety at sea issues for vessels needing to hove-to in the lee of land in bad weather conditions.		Customs New Zealand, who would also prefer vessels not to call into the Kermadec Islands in transit.	

Submitter No. 12 Heritage Expeditions Limited

Rules 26 to 28

Oppose

The understood best practice to minimise hull and niche area fouling is through regular cleaning, inspection, removal of any incursion, safe disposal (after identification) and re-application of anti-fouling paint, ideally on an annual basis. The plan makes no mention of good practice or of the extensive standard development work being undertaken by MAF Biosecurity New Zealand. MAF Biosecurity New Zealand are the expert lead agency in this matter. The plan is getting ahead of MAF Biosecurity New Zealand. There is a shortage of marine taxonomic advice that is readily available in New Zealand to identify marine organisms. Any situation of hull fouling requires a rapid response, baseline information is limited and identification can be time consuming. The relevant government agencies could develop a reference database of biofouling that would enable faster identification of the more common species to ensure that in the event of a relatively routine fouling a rapid, pragmatic and biosecure response is feasible.

Defer to the MAF Biosecurity New Zealand standard for controls on hull and niche fouling. The policies should note an appropriate reference to the taxonomic reality and the rules to be practical reflect this reality.

The consultation document released by MAF Biosecurity New Zealand during the development of the draft Import Health Standard for Biofouling acknowledges that New Zealand's high values areas such as the Subantarctic Islands warrant special inspection and treatment processes (MAF BNZ Consultation paper 10/04 May 2010, paragraph 58). Further, in informal communications MAF Biosecurity NZ staff has questioned why the proposed rules do not require 4 weekly inspections as the NIWA report recommends. Its is also noted that the first requirement of existing rules A and 26 requires evidence that the vessel has an anti-fouling system applied in accordance with the manufacturers instructions and will be within the manufacturers timeframe for effectiveness to be provided in advance, similar to the MAF Biosecurity NZ Import Health Standard. The biosecurity rules in the proposed plan are not inconsistent with the MAF Biosecurity NZ Import Health Standard. However, it is agreed that good vessel hygiene is key to minimising marine biosecurity risk. It is recommended that an alternative option be included that allows a vessel exemption from the in-water inspections if the vessels anti-fouling is less than 6 months old for the duration of the time that the vessel is in the coastal marine area of the islands. The alternative option could be included as a part of rule 26, under the Standards/Terms/Conditions below the bold words "And either:" to be worded as follows:
"The vessels anti-fouling is less than 6 months old for the duration of the time that the vessel is in the coastal marine area of the islands"

Reject

Plan Section *Surface water activities in the Subantarctic Islands rules Subsection: None*

Submitter No. 12	Heritage Expeditions Limited			<i>Accept in part</i>
	<i>Oppose</i> Rules 29 to 31 allow access close inshore for vessels involved in management operations, re-supply of fuel stores and management activities and research with no access restrictions on vessel length. No rationale is provided for the exemption of vessels involved in these activities. This is inconsistent with the focus of the plan on reducing the risk of maritime incident and oil spill, and the risk mitigation proposed through the rules based on ship length. As noted in another submission, there are many variables that determine the criteria for vessel safety. Vessel safety is also connected to and relatively to the length of stay at any given anchorage. Expedition vessels generally spend limited time at anchorage, and mainly during day light hour, thereby significantly reducing the risk.	That vessel length as the sole criteria for vessel safety is to be re-thought in the light of technological and associated safety trends and other relevant maritime trends. If ship length is used as a pragmatic way of categorising vessels this should be explicitly stated and also state the risk factors taken into account in determining the categories.	Refer to the recommendation on Heritage Expeditions Limited submission on Issue 1: Natural Character "All the rules, Appendix 1 and statement of issues text ".	Refer to the decision, reasons and changes in response to submission from Heritage Expeditions Limited submission on Issue 1: Natural Character "All the rules, Appendix 1 and statement of issues text ".

Submitter No. 1	New Zealand Defence Force			<i>Accept</i>
Note 2	<i>Support</i> Support for the exemption provided in Note 2 for the RNZN when involved in activities for any of the purposes listed in section 5 of the Defence Act 1990.	No change		Retain the note as requested. No decision necessary.

Submitter No. 15	Minister of Conservation			<i>Accept</i>
Rule 29	<i>Support</i> The rule is unclear. It should allow for management activities including research for the Department of Conservation.	Reword Rule 29 to read: Access to and anchoring in the coastal marine area of the Subantarctic Islands by vessels involved in management activities and research for the Department of Conservation including vessels of the New Zealand Navy.	It is desirable to remove any ambiguities from the rule. Reword Rule 29 to read: "Access to and anchoring in the coastal marine area of the Subantarctic Islands by vessels involved in management activities and research for the Department of Conservation including vessels of the New Zealand Navy."	Refer to the officer's reasons which are adopted. Change required: Reword Rule 29 to read: "Access to and anchoring in the coastal marine area of the Subantarctic Islands by vessels involved in management activities and research for the Department of Conservation including vessels of the New Zealand Navy."

Rule 29	<i>Oppose</i> It is inappropriate that the Department provide itself and the New Zealand Navy permitted activity status while simultaneously expecting others to go through a consenting process. The	Reject the submission	The Department is charged with the management of the islands and their marine environment, that includes operational work and research. It requires flexibility to carry out that function. Research contributes to building	<i>Reject</i> Refer to the officer's reasons which are adopted.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
	implication is that DOC and navy vessels carry less risk, this is unlikely. The proposed plan carries a bias towards vessels involved in research and conservation works.		knowledge and understanding of the islands and their ecosystems and is essential to management and monitoring. Aside from enabling the Department to carry out its statutory function, the rules provide for continued access for operational work and research as current uses of the coastal marine areas of the islands as they do fishing and tourism. It is an accepted level of risk balanced with the need to undertake the work. There is no exemption from the hull and niche area fouling rules.	
Submitter No. 15 Rule 30	Minister of Conservation <i>Oppose</i> Rule 30 is superfluous. The delivering of fuel is covered by rule 29, as it is a management activity and for research.	Remove rule 30 or include part of rule 30 into rule 29.	The rule is superfluous since the activity is covered by Rule 29. It is recommended to delete rule 30.	<i>Accept</i> Refer to the officer's reasons which are adopted. Change required: delete rule 30.
Submitter No. 15 Rule 31	Minister of Conservation <i>Support</i> Other authorisations may be required under the Reserves Act 1977.	Reword rule 31 standard and terms to read: Research is consistent with the New Zealand Subantarctic Islands Research Strategy 2003 and any other permits that may be required under the Reserves Act 1977.	It should be made clear that for research activities that take place above MLWS authorisation under the Reserves Act 1977 will be necessary. Reword rule 31 Standards/Terms/Conditions to read: "Research is consistent with the New Zealand Subantarctic Islands Research Strategy 2003 and any other permits that may be required under the Reserves Act 1977."	<i>Accept</i> Refer to the officer's reasons which are adopted. Change required: Reword the first condition of rule to read: "Research is consistent with the New Zealand Subantarctic Islands Research Strategy 2003 and any other permits that may be required under the Reserves Act 1977."
Submitter No. 12 Rule 36	Heritage Expeditions Limited <i>Oppose in Part</i> The activity description of rule 36 is "Access to the coastal marine area of the Subantarctic Islands" yet in the standards/terms/conditions it includes "Northeast of Macauley Island" that is in the Kermadec Islands. This rule should make provision for vessels up to 125 metres - this is imperative for safety of zodiac (passenger) operations.	The reference to Macauley Island be removed from rule 36, and provision be made for vessels up to 125 metres - to ensure passenger safety embarking and disembarking from zodiacs.	It is not logical to refer to Macauley Island of the Kermadec Islands in the surface water access rules for the Subantarctic Islands. Insert a new rule in the Surface water access rules for the Kermadec Islands that reads exactly the same as rule 36 except for the activity description which should substitute the word "Kermadec" for Subantarctic" and the 3rd bullet point in the Standards/Terms/Conditions which should read "The unloading location is Northeast of Macauley Island". Regarding the suggested change of vessel length, refer to the recommendation on Heritage Expeditions Limited submission on Issue 1: Natural Character "All the rules, Appendix 1 and statement of issues text".	<i>Accept in part</i> Refer to the officer's reasons which are adopted. Changes required: Insert a new rule in the Surface water access rules for the Kermadec Islands as follows: Activity description: "Access to the coastal marine area of the Kermadec Islands by vessels up to 75 metres in length in the zone MHWS out to 300 metres from MHWS for the purpose of launching ancillary craft and passengers" Conditions: <ul style="list-style-type: none"> • <input type="checkbox"/> The vessel does not anchor • Unloading location Northeast of Macauley Island • Activities will not result in any adverse effects on a site of cultural or historic heritage listed in Appendix 2 • Sufficient personnel to move the vessel if needed are to remain on board the vessel at all times • No more than one cruise ship in a bay at any one time"

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
<p>Submitter No. 15 Rule 36</p>	<p>Minister of Conservation</p> <p><i>Support</i> The rule needs to provide for the unloading and re-loading of passengers occurs offshore of the land locations listed. In relation to the Snares Island the locations listed in the plan are too prescriptive.</p>	<p>Reword the conditions of rule 36 to read: "Unloading and reloading of passengers off the following locations only:" In relation to the two Snares Island locations, remove reference to Ho Ho Bay and the Enclosed Bay and list the one location: "North East Island, Snares Island".</p>	<p>The rule needs to be clear and free of ambiguity. Reword the conditions of rule 36 to read: "Unloading and reloading of passengers offshore of the following locations only:" In relation to the two Snares Island locations, remove reference to Ho Ho Bay and the Enclosed Bay and list the one location: "North East Island, Snares Island".</p>	<p>Classification: "Permitted"</p> <p><i>Accept</i> Refer to the officer's reasons which are adopted. Changes required: In the activity description of rule 36, after the word "launching" add the words: "and subsequently collecting" and delete the two Snares Island locations and replace with "North East Island, Snares Island".</p>
<p>Submitter No. 5 Rule 37</p>	<p>New Zealand Seafood Industry Council Limited</p> <p><i>Oppose</i> Rule 37 makes access to coastal waters by vessels up to 25m in the zone MHWS out to 300m a discretionary activity that would require a coastal permit. Small inshore fishing vessels (typically <25m in length) use the coastal region of the Snares to access fishing grounds that are located close to shore, for example rock lobster vessels. Rock lobster vessels require continued and future access to fishing grounds.</p>	<p>Amend rule 37 to allow permitted access by commercial fishing vessels in the zone MHWS out to 300m.</p>	<p>A fundamental principle of the proposed plan is to reduce the risk of oil spill and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy, the zone inside 300m of MHWS being the zone of highest risk. Our assessment of current use showed that only one fisherman currently uses the coastal marine area of any of the Subantarctic Islands to obtain CRA8 quota, Mr Stuart Cave, a rock lobster fisherman who uses the area around Snares Island to catch his quota. Policy 25 and rule 8 provide for Mr Cave to place a temporary mooring as a permitted activity. This is a one-off exception to the general principle in the proposed plan that structures and permanent moorings should be avoided because of the increased risk of biosecurity breaches. This exception for Mr Cave recognises his existing use and seeks to provide for his health and safety by recognising that because of the nature of the seabed and environmental conditions inshore around Snares Island conventional anchoring is not practical. In preparing the proposed plan, the Department consulted with both Mr Cave and Mr Malcolm Lawson, CEO of the CRA8 Management Committee. Mr Lawson confirmed that there are no vessels fishing in CRA8 fishery that are in excess of 25 metres in length, and he considered that the ability for vessels up to 25 metres to apply for a discretionary permit to access inside 300 metres is sufficient, provided Mr Cave's access is provided for. Access inside 300m for Mr Cave also needs to be provided for. It is recommended that a new rule is included in the Surface water access rules for the Subantarctic Islands that provides for permitted access for Mr Stuart Cave both to access his mooring and obtain his CRA8 quota. The rule will be subject to conditions such as biosecurity checks of the dry parts of the vessel, and the same sunset clause as in rule 8 - the rule will only allow access provided Mr Cave continues to hold quota in CRA8 and continues to fish for it around the Snares Island with a gap of no more than 36 months. It is recommended to include a new rule in the Surface water access rules for the Subantarctic Islands in</p>	<p><i>Accept in part</i> Refer to decision and reasons in response to Talley's submission on policy 25.</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
			<p>between rules 36 and 37 as follows: The activity description to read: "Access to the coastal marine area of Snares Island for the purpose of mooring and fishing for crayfish" The Standards/Terms/Conditions to read: "Access if for Mr Stuart Cave to use the mooring provided for in rule 8 for the purpose of obtaining crayfish as per Mr Stuart Cave's quota allocation in CRA8. This rule will only continue to apply if Mr Stuart Cave continues to hold quota on CRA8 and continues to fish for crayfish in the area around Snares Islands with a gap of no more than 36 months. Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators' knowledge is free of harmful plants and animals (including insects)." Classification to read: "Permitted".</p>	
Submitter No. 12 Rule 37	Heritage Expeditions Limited <i>Oppose</i> It is unclear what this means and it is discretionary. There is no explanation in the section 32 report and it is suggested that this is an error.	That this rule if in error be deleted and if not be better described.	This rule allows vessels up to 25 metres in length that do not meet the definition of ancillary craft the ability to apply for a coastal permit as a discretionary activity for access inside the zone MHWS to 300 metres from MHWS.	<i>Reject</i> Refer to the officer's reasons which are adopted.
Submitter No. 15 Rule 45	Minister of Conservation <i>Support</i> The condition that lists the anchoring locations for vessels under 25 metres in length incorrectly refers to: "Musgrave Inlet (east coast) Auckland Island". It should refer to: "Musgrave Harbour (in Carnley Harbour) Auckland Island".	Correct the reference in rule 45 to refer to: "Musgrave Harbour (in Carnley Harbour) Auckland Island".	The location listed in the rule needs to be corrected to accurately describe the location as shown on Maps 1 and 4 in Appendix 1. Amend the reference in rule 45 to refer to: "Musgrave Harbour (in Carnley Harbour) Auckland Island".	<i>Accept</i> Refer to the officer's reasons which are adopted. Change required: Delete the reference in rule 45 to "Musgrave Inlet (east coast) Auckland Island" and replace with: "Musgrave Harbour (in Carnley Harbour) Auckland Island".
Submitter No. 15 Rule 46	Minister of Conservation <i>Support</i> The condition "No more than one cruise ship in a bay at any one time" is unclear. The condition listing the anchoring locations is missing four locations as shown on the maps in Appendix 1. Missing from the Auckland Islands locations are: o Ranui Cove (east coast) Auckland Island o Musgrave Inlet (east coast) Auckland Island o Raynal Point (in Carnley Harbour) Auckland Island o Coleridge Bay (in Carnley Harbour) Auckland Island	Add the following missing anchorage sites to rule 46: o Ranui Cove (east coast) Auckland Island o Musgrave Inlet (east coast) Auckland Island o Raynal Point (in Carnley Harbour) Auckland Island o Coleridge Bay (in Carnley Harbour) Auckland Island And reword the last condition of rule 46 to read: "No more than one cruise ship in a bay or any harbour, or off the Snares Islands at any one time".	The locations listed in the rule need to be corrected to accurately describe the location as shown on Maps 1 to 4 in Appendix 1. Refer to the submission from Heritage Expeditions Limited on Appendix 1 for corrections to the locations listed in rule 46. Reword the last condition of rule 46 to read: "No more than one cruise ship in a bay or any harbour, or off the Snares Islands at any one time".	<i>Accept</i> Refer to the decision, reasons and changes in response to the submission from Heritage Expeditions on 'Surface water activities in the Subantarctic Islands rules, Maps and surface water access rules'.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Submitter No. 4 Rule 47	Talleys Group Limited <i>Oppose</i> Talleys Group oppose the prohibition of ship to ship transfers of fuel on the basis that such activity is already regulated by MARPOL ANNEX 1 and enforced by the Maritime Transport Act 1994. The prohibition of ship to ship transfers of fuel is not supported by any analysis of risk and adverse effect - which should consider fuel type and volume and the transient nature of effect. The activity is already regulated by international convention and domestic legislation. As a prohibited activity policy 13 and rule 47 would affect the use of ancillary craft and small vessels with small fuel reservoirs that may need to be refuelled between sightseeing trips. There could also be emergency requirements where fuel needs to be transferred between vessels (e.g. fuel contamination).	Amend rule 47 [and policy 13] so that ship to ship fuel transfers are permitted activities subject to prevailing legislation and best practice.	MARPOL Annex 1 provisions for ship-to-ship transfers are restricted to tankers transferring cargo and specifically exclude bunkering. "Resolution MEPC.186(59) was adopted at MEPC 59 and contains a new Chapter 8 of MARPOL Annex I on the prevention of pollution during the transfer of oil cargo between oil tankers at sea. The new regulation does not apply to any bunker operation and oil transfer operation associated with fixed or floating platforms". National jurisdictions are entirely within their rights to impose more stringent measures within Territorial waters. Given the high value, sensitivity and remoteness of the islands and their marine environment, and the difficulties associated with any response in the event of an incident it is considered appropriate to prohibit ship to ship transfers of fuel for bunkering. For clarity, however, the activity description of rule 47 should be to read: "Ship to ship fuel transfers in the coastal marine area of the Subantarctic Islands." For consistency the same amendment should be made to rule 51 for the Kermadec Islands.	<i>Reject</i> Refer to the decisions and reasons given in response to Sanford's submissions policy 13 and rules 47 and 48.
Submitter No. 6 Rule 47	Sanford Limited <i>Oppose</i> This rule prohibits ship-to-ship transfers of fuel. This rule does not allow for emergency transfers if fuel becomes contaminated or for new business developments. The rule should be deleted as the activity is already provided for by MARPOL.	Delete rule 47	MARPOL Annex 1 provisions for ship-to-ship transfers are restricted to tankers transferring cargo and specifically exclude bunkering. "Resolution MEPC.186(59) was adopted at MEPC 59 and contains a new Chapter 8 of MARPOL Annex I on the prevention of pollution during the transfer of oil cargo between oil tankers at sea. The new regulation does not apply to any bunker operation and oil transfer operation associated with fixed or floating platforms". National jurisdictions are entirely within their rights to impose more stringent measures within Territorial waters. Given the high value, sensitivity and remoteness of the islands and their marine environment, and the difficulties associated with any response in the event of an incident it is considered appropriate to prohibit ship to ship transfers of fuel for bunkering. The rules of the plan do not apply to emergency situations - refer the note at the beginning of the rules tables on page 34.	<i>Reject</i> Refer to reasons for decision not to delete rule 48 as it relates to fishing vessels (using and carrying heavy fuel oil (HFO)) as requested by Sanford. However, it is considered unreasonable not to allow the occasional transfers of marine gas oil (MGO) or marine diesel oil (MDO) either in emergency circumstances, such as in the event fuel becomes contaminated, or for the transfer of excess MGO or MDO from one vessel to another if one should for some reason be returning to port early and the other staying at the islands. The plan should also include an additional "other method" (following the policies concerning the control of discharges of contaminants), being that the Department of Conservation will work with stakeholders to develop best practice guidelines for the undertaking of ship to ship fuel transfers in order to reduce the risk of potential incidents. Changes required: Insert a new rule 48 (existing rule 47) to read: "Ship to ship fuel transfers in the coastal marine area of the Subantarctic Islands other than as provided for in rule 47" Classification: Prohibited Insert a new rule 47 as follows: Activity description: "Ship to ship fuel transfers of Marine Gas Oil (MGO) or Marine Diesel Oil (MDO) in the coastal marine area of the Subantarctic Islands"

	<p>by light fuel oil. The main use these vessels have of the Territorial Sea is passage and sheltering in the lee of the islands (up to 2 nautical miles off the coast from MHWS) and at times they need to anchor closer to safely effect repairs. Commercial fishing interests have explored whether a blend of light fuel oil could be made with a density of less than 0.900. They have been advised that the costs of any such blend would be uneconomic.</p>	Territorial Sea.		
<p>Submitter No. 5 Rule 48</p>	<p>New Zealand Seafood Industry Council Limited</p> <p><i>Oppose</i></p> <p>Rule 48 prohibits access to the coastal marine area for fishing vessels fuelled by or carrying heavy fuel oil. In New Zealand many deepwater vessels and particularly trawlers are powered by light fuel oil. The main use these vessels have of the Territorial Sea is passage and sheltering in the lee of the islands up to 2 nautical miles off the coast from MHWS. Commercial fishing interests have explored whether a blend of light fuel oil could be made with a density of less than 0.900. They have been advised that the costs of any such blend would be uneconomic as it would require far greater gasoil proportion.</p>	<p>Remove rule 48 and review the definition of heavy fuel oil in conjunction with the seafood industry, for the purpose of the plan, or recognise the limits for heavy fuel oil to allow for shelter and passage of fishing vessels using light fuel oil within the Territorial Sea.</p>	<p>Refer separate report regarding rule 48 for discussion during the Hearing.</p>	<p>Refer to the decisions and reasons given in response to Sanford's submissions policy 13 and rules 47 and 48.</p>
<p>Submitter No. 6 Rule 48 and definition of heavy fuel oil</p>	<p>Sanford Limited</p> <p><i>Oppose</i></p> <p>This rule would prohibit fishing vessels entering within 12nM of the Subantarctic Islands. The s32 has not sufficiently justified the rule in terms of benefit cost analysis; it is unclear why the Department wants to constrain vessels transiting.</p>	<p>Delete the rule as it relates to fishing vessels.</p>	<p>Refer separate report regarding rule 48 and heavy fuel oil for discussion during the Hearing.</p>	<p><i>Reject</i></p> <p>The issue here is a classic instance of the balancing, on the one hand, of a risk in a delicate and unique ecological environment where its remoteness would likely be a considerable complication if a compromising event occurred, against, on the other hand, a commercial benefit/dis-benefit that can be counted in millions of dollars.</p> <p>It does appear that the delicate and unique ecology of these islands is well documented. It also seems to be the case that the risk of a compromising event (i.e. a fuel spill) has also in fact been documented – in as much as it can be. Refer Annex 9 to the NZ Oil Fuel Spill Contingency Plan referred to in the s.32 analysis. Regrettably such spills cannot be discounted to a rate of occurrence that means the risk should be disregarded. Unfortunately the recent history, including in Antarctic waters, suggests otherwise.</p> <p>The MARPOL Treaty provisions certainly assume some relevance in terms of international thinking - at least with regard to the general position for all areas south of 60 degrees Latitude. There is some force, however, in the</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
				<p>point that New Zealand's sub-Antarctic islands are not quite that far south, with Campbell Island, the southern most, at 52 degrees.</p> <p>On balance it is considered the risk to these very special places (unique in a global sense) must in the end outweigh the economic argument. However, a transitional period of 5 years for the deep water vessels that use heavy fuel oil (including the LFO the deep water vessels currently use) to continue to access the lee side of the Auckland and Campbell Islands for shelter, as suggested by the officer, is pragmatic and reasonable. While the Sanford submission suggested a 2 nautical mile limit, it is accepted that the vessel data obtained by the officers, at the request of the Deepwater Group, indicates that this limit needs to be 1.5 nautical miles in the case of Campbell Island in order to enable shelter in the lee of Campbell Island on account of its lower relief.</p> <p>Changes required:</p> <p>Renumber existing rule 48 as rule 50</p> <p>Delete the words "fuelled by or carrying heavy fuel oil" and replace with "using heavy fuel oil as a fuel or carrying heavy fuel oil as a cargo" and add a further exception at the end of the activity description of new rule 50 (existing rule 48) as follows: "; and those vessels complying with rule 49"</p> <p>Insert a new rule 49 as follows:</p> <p>Activity description: "Access to the coastal marine area of Auckland and Campbell Islands by fishing vessels fuelled with heavy fuel oil: in the lee of Auckland Island no closer than 2 nautical miles from MHWS; and in the lee of Campbell Island no closer than 1500 nautical miles from MHWS"</p> <p>First condition: "This rule applies for 5 years from the date on which this plan becomes operative, at which point it ceases to have effect".</p> <p>Second condition: "The purpose of access is to seek shelter during storms or for the care of the vessel or crew"</p> <p>Third condition: "Sufficient personnel to move the vessel if needed are to remain on board at all times"</p> <p>Classification: Permitted</p> <p>Delete the words "fuelled by or carrying heavy fuel oil" and replace with "using heavy fuel oil as</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Submitter No. 4	Talleys Group Limited	Modify the Standards/Terms/Conditions of rules 29 to 32 inclusive, 35, 36, 38, 40, 41, 44, 45, 46, regarding inspection above the water line to read: "Vessel has been thoroughly checked for harmful organisms above the waterline".	It is recommended that the condition in the rules be reworded to read: "Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators knowledge is free of harmful plants and animals (including insects)", that Policy 2 be similarly amended; and insert a section for "Other methods" after policy 6 and include a method that states the Department, in consultation with industry, will develop guidelines for undertaking biosecurity checks of the dry areas of vessels.	a fuel or carrying heavy fuel oil as a cargo" in the activity description of existing rule 59. <i>Accept in part</i> Refer to decision and reasons given in response to Sanford's submission on the hull fouling rule 26.
Submitter No. 4	Talleys Group Limited	Replace rules 29 to 46 [and 49 and 50 and 52 to 58] with a simpler approach based on guidelines.	The risk of oil spill and/or biosecurity breach are key issues for the proposed plan. The objectives of the proposed plan (in brief) are to preserve natural character, enable use that is consistent with the preservation of natural character, and protect indigenous biological diversity. To give effect to these objectives the policies and rules seek to reduce the risk of oil spill and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy. The zone inside 300m of MHWS, as the closest to shore, is the zone of highest risk. The 300m was selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible. Guidelines are not considered to provide enough assurance of protection of such high value areas. There is a risk to the Minister of not fulfilling her obligation to achieve the purpose of the RMA – sustainable management of the natural and physical resources of the islands - if she were to use guidelines to address the key issues. She also has an international obligation given the World Heritage status for the Subantarctic Islands. The NZ government has sent a clear signal how it values the Subantarctic Islands recently with the announcement of its intention to create further extensive marine reserves around the Campbell, Bountys and Antipodes Islands by special legislation, before the end of the year. It is consistent with RMA coastal planning practice around New Zealand to impose stricter rules for high value areas. The alternative to the current vessel length and zones of access matrix, to make it simpler, is to remove the vessel lengths and multiple zones, and require all access inside 600m from MHWS other than	<i>Reject</i> Refer to the officer's reasons which are adopted. Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Rules 29 to 46 [and 49 and 50 and 52 to 58]	<p><i>Support in Part</i></p> <p>Vessel length as the sole criteria for vessel safety be re-thought in light of technological and associated safety trends and other relevant maritime trends. If ship length is used as a pragmatic way of categorising vessels this should be explicitly stated and also state the risk factors taken into account in determining the categories.</p>	<p>Include rationale for distance restrictions and vessel size. Change the vessel length classes and zones so that a class of 25-125 metres is a permitted activity within the zone 300 to 600 metres from MHWS. Amend the narrative of the proposed plan (control of surface water activities para 3 pg 25; and discharges para 2, page 27) to be re-written to accurately reflect the nature of risk from increased boat length and the rationale for applying boat length as the criteria for assessing risk. If boat length is a proxy for other factors then this should be stated clearly.</p>	<p>The risk of oil spill and/or biosecurity breach are key issues for the proposed plan. The rules seek to reduce the risk of oil spill and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy. The zone inside 300m of MHWS, as the closest to shore, is the zone of highest risk. The 300m was selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous variables that would contribute to a vessels risk assessment. The explanatory text preceding the policies on the control of surface water activities should explain the rationale for the vessel length and zones established in the rules and maps, and acknowledge that vessel length is used as a proxy for the numerous variables that influence risk. The following paragraph should be included as the sixth paragraph under the title "Control of surface water activities":</p> <p>"The control of surface water activities is based on zones of access relative to vessel length. Vessel length is used as a proxy for numerous factors that can influence risk of oil spill and/or biosecurity breach, such as: vessel length; propulsion system; number, type and location of propellers; number, type and position of rudders; presence and power of bow and/or stern thrusters; windage of the vessel relative to its power; age of vessel; fuel type, duration of access etc. The zone inside 300m from MHWS, as the closest to shore, is the zone of highest risk. The 300m is selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous variables noted above that would contribute to a vessels risk assessment. The degree of risk is further exacerbated by the remoteness of the islands and the environmental conditions that would hamper any response efforts."</p> <p>The alternative to the current vessel length and zones of access matrix, to make it simpler, is to remove the vessel lengths and multiple zones, and require all access inside 600m from MHWS other than ancillary craft to obtain a discretionary coastal permit. This will allow case by case assessment of all the variables that could influence risk, such as vessel length, propulsion system, age of vessel, fuel type, duration of access etc.</p>	<p><i>Accept in part</i></p> <p>Refer to the decision, reasons and decision in response to the submission from Heritage Expeditions on 'Issue 1 Natural Character, All the rules, Appendix 1 and statement of issues text'.</p>

Submitter No. 6 Sanford Limited

Rules 32 to 46

Oppose

Oppose all references to insects and harmful organisms. It is unclear how vessels are to be insect free. The section 32 report fails to provide any advice on the methods to be used

Delete all reference to insects in Rules 32 - 46 inclusive and include a guideline for vessels entering the coastal marine area.

It is recommended that the condition in the rules be re-worded to read: "Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators

Accept in part

Refer to the decision and reasons in response to Sanford's submission on rule 26.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
	to eradicate and a cost benefit analysis. Sanford supports the use of guidelines. Regulation should only apply to vessels, which are intending to land on Islands. Vessels seeking shelter from adverse weather should have unconstrained anchoring.		knowledge is free of harmful plants and animals (including insects)", that Policy 2 be similarly amended (for consistency); and insert a section for "Other methods" after policy 6 and include a method that states the Department, in consultation with industry, will develop guidelines for undertaking biosecurity checks of the dry areas of vessels. The suggestion of restricting the hull and niche area biosecurity rules to vessels intending to land is not supported. All vessels that go close into shore are a biosecurity risk. The scampi fishing vessels that use the inshore waters around Auckland Island for shelter but do not land generally go closer into shore, and remain in the one location for longer periods of time (can be up to 3 or 4 weeks) than any other users of the inshore waters around the islands and represent a significant biosecurity risk.

Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
Rules 32 to 46	<i>Oppose</i> Whether landing or not "planning to land" all vessels should be treated the same. It is likely that fishing crews will land informally if holed up for long periods. Risk from oil spills and biosecurity breaches are threats from all vessels whether they are cruise, naval, sailing, research or fishing etc. Landing is not an appropriate trigger and specific mitigation for biosecurity breaches should be put in place for fishing vessels and others seeking shelter.	All vessels should be bound by the same rules relating to biosecurity, including fishing vessels.	A suggestion of restricting the hull and niche area biosecurity rules to vessels intending to land is not supported. All vessels that go close into shore are a biosecurity risk. The scampi fishing vessels that use the inshore waters around Auckland Island for shelter but do not land generally go closer into shore, and remain in the one location for longer periods of time (can be up to 3 or 4 weeks) than any other users of the inshore waters around the islands and represent a significant biosecurity risk. All vessels are subject to the same biosecurity controls of the proposed plan.	<i>Accept</i> Refer to the officer's reasons which are adopted.
Rules 32 to 46	<i>Oppose</i> Support for guidelines on insects	That the reference to insects be removed (or qualified with the intention to prepare and provide guidelines on insects) from the rules and guidelines be prepared based on good practices.	It is recommended that the condition in the rules be reworded to read: "Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators knowledge is free of harmful plants and animals (including insects)", that Policy 2 be similarly amended (for consistency); and insert a section for "Other methods" after policy 6 and include a method that states the Department, in consultation with industry, will develop guidelines for undertaking biosecurity checks of the dry areas of vessels.	<i>Accept in part</i> Refer to the decision, reasons and changes in response to the submission from Sanford on rule 26.

Submitter No. 6 Sanford Limited

Rules 32 to 46 and planning maps 1 to 8	<i>Oppose</i> This submission relates to vessel length, distance from MHWS, designated anchoring points and planning maps, and the activity of fishing. The use of vessel length and distance from the MHWS as a trigger for the rules affecting surface water activities is broad brush	Provide an exemption for fishing vessels. (i) Delete vessel length trigger and replace with fuel type; or another risk based approach or (ii) Amend vessel length thresholds from 25m to 45m, and 75m to 125m; (iii) Amend planning maps and tables accordingly, and (iv) Delete 300m (v) Delete zone 300 - 600m and 600 - 1000m.	The risk of oil spill and/or biosecurity breach are key issues for the proposed plan. The objectives of the proposed plan (in brief) are to preserve natural character, enable use that is consistent with the preservation of natural character, and protect indigenous biological diversity. To give effect to these objectives the policies and rules seek to reduce the risk of oil spill	<i>Reject</i> Refer to the officer's reasons which are adopted. Refer also to the response to Sanford's submission on policy 7.
---	---	---	---	--

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
	<p>and unnecessarily restrictive. The section 32 report has not sufficiently considered alternative triggers - a more appropriate trigger is type of fuel used to power the vessel which would be risk based (not vessel length). Fishing vessels less than 45 meters in length only run on marine gas oil, which is a diesel produced by distillation, and poses the least threat to the marine environment if spilled. The Glossary in the proposed plan fails to make a distinction between the fuel types and potential environmental risk.</p> <p>If the decision is to stay with vessel length we recommend increasing the vessel length of 25m to 45m, and from 45m to 125m. This better reflects the fishing industry use. We note that cruise ships are generally greater than 125m in length.</p> <p>In terms of the triggers, 300m, 600m and 1000m from MHWS, the section 32 has understated the impact and cost of these triggers against environmental benefits gained. In Sanford's view one trigger is justified (i) vessels intending land.</p> <p>The controls on access that prohibit vessels between 25m and 75m to access waters between 300m and 600m could unnecessarily restrict transit routes for no apparent environmental gain. A good example of this is on Map A1 where vessels could chose to steam between Enderby Island and Dundas Island but are now no longer able to. If the vessel is certified as having correct anti-foul treatment hull, and is free of harmful plants and animals, what is the environmental risk?</p> <p>When the anchor is paid out, from the anchor point, the boat may well swing within an arch of 100m. This would mean that a vessel which anchors at 400m is sitting on water somewhere between 300m and 500m from MHWS. This makes compliance of the rule difficult. This was pointed out by Captain Buckens but was not taken note of in the s32 Report.</p>	(vi) Permit lawful fishing activities	<p>and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy. The zone inside 300m of MHWS, as the closest to shore, is the zone of highest risk. The 300m was selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible.</p> <p>Sanford has misread the maps and rules controlling surface water access for vessels 25 to 75 metres in length between 300 and 600 metres from MHWS - access is permitted not prohibited. In fact access for vessels 25 to 75 metres in length is only prohibited inside 300 metres from MHWS, other than to access the identified anchorages for vessels up to 75 metres in length inside that zone, otherwise access beyond 300 metres is a permitted activity. Accordingly, the examples given in the submission are a permitted activity not prohibited.</p> <p>The suggestion of restricting the hull and niche area biosecurity rules to vessels intending to land is not supported. All vessels that go close into shore are a biosecurity risk. The scampi fishing vessels that use the inshore waters around Auckland Island for shelter but do not land generally go closer into shore, and remain in the one location for longer periods of time (can be up to 3 or 4 weeks) than any other users of the inshore waters around the islands and represent a significant biosecurity risk.</p> <p>The 'preferred' anchorages shown on the maps and listed in the rules were selected to provide for existing use and consulted on with those existing users, including the scampi fishing industry. The Department consulted with the scampi fishing industry, given that they regularly shelter close into shore at locations around Auckland Island, to ensure we included their preferred locations, taking into account the variety of possible weather conditions. With respect to vessels swinging within an arch of the anchor point, Buckens et al 2009 note that the anchorages identified are in general well chosen with ample swinging room for the vessel of the approved length (Buckens et al 2009, page 15). For vessels longer than the approved length, the distance of the swinging arc will need to be taken into account when anchoring outside the zone.</p> <p>The alternative to the current vessel length and zones of access matrix, to make it simpler, is to remove the vessel lengths and multiple zones, and require all access inside 600m from MHWS other than ancillary craft to obtain a discretionary coastal permit. This will allow case by case assessment of all the variables that could influence risk, such as vessel length, propulsion system, age of vessel, fuel type, duration of access etc.</p>

Plan Section *Surface water activities for the Kermadec Islands rules Subsection: Condition - biosecurity check above the waterline*

Submitter No. 8 Royal Forest and Bird Protection Society of New Zealand Incorporated

Condition - biosecurity check above the waterline

Support
 There needs to be more information on how to assess and implement inspections of ships above the vessel waterline for harmful plants and animals. How is a ship to be checked and how will this be monitored for effectiveness. Sticky boards that can currently be used to trap rodents and insects are to be phased out. Effective best practice needs to be outlined in the plan. In particular, naval vessels sometimes return through Raoul from the Pacific. If appropriate rules cannot be applied to naval vessels returning from the Pacific then the alternative is to prohibit them from visiting Raoul on the return journey.

Develop and/or include best practice guidelines for maintaining rodent and insect free ships and for ship inspection.

It is recommended that the condition in the rules be reworded to read: "Within 24 hours of departure for the Islands, the vessel has been thoroughly checked for harmful organisms above the waterline, inside and outside, and within the hull, and to the vessel operators knowledge is free of harmful plants and animals (including insects)", that Policy 2 be similarly amended for consistency; and insert a section for "Other methods" after policy 6 and include a method that states the Department, in consultation with industry, will develop guidelines for undertaking biosecurity checks of the dry areas of vessels.

Accept in part

Refer to decision and reasons given in response to Sanford's submission on the hull fouling rule 26.

Plan Section *Administrative charges Subsection: Administrative charges and financial contributions*

Submitter No. 6 Sanford Limited

Administrative charges and financial contributions

Oppose
Sanford invests significant money each year into sustainability. It is fair and reasonable to expect that any financial contribution or administrative charge be considered in light of the overall financial contribution the Company makes and is not considered on a consent basis.

Amend text to include a balance between RMA s36 and financial contribution already being made towards sustainability.

The section 36 RMA "process" is not available to the Minister of Conservation to impose administrative charges because those charges are fixed using the Local Govt Act 2002. The Minister has no ability to set charges under the Local Govt Act 2002. Where a person or organisation is required to apply to the Minister for a consent, including a renewal of a consent, then the direct and/or indirect costs incurred by the Department (on behalf of the Minister) in responding to that application may be recovered under the Conservation Act. Any elements of public good that might exist in certain circumstances will be dealt with by the reduction/waiver provisions of section 60 of the Conservation Act.

Cost structures are based on a combination of known cost data (relating to hourly costing of staff) and benchmarking comparisons with producers of similar or nearly identical outputs (e.g. territorial authority consent processes under the RMA).

Reject

Refer to the officer's reasons which are adopted.

Submitter No. 15 Minister of Conservation

Support in Part
The proposed plan says it will establish administrative charges via regulations under section 360 RMA. However, it would be a simpler option to charge administrative charges under the Conservation Act 1987.

Reword the text under the heading Administrative charges to read: "Administrative charges will be charged under the Conservation Act 1987".

Developing regulations is an involved process. The Conservation Act option is simpler, and allows better alignment with RMA charges as imposed by local authorities using section 36 of the RMA and the provisions of the Local Government Act 2002.

Accept

Refer to the officer's reasons which are adopted. Changes required:

Delete the text under the heading 'Administrative charges' and replace with: "Administrative charges will be charged under the Conservation Act 1987".

Plan Section *Integrated management Subsection: CMS*

Submitter No. 2 **Southland Conservation Board**

CMS

Support

Strong support for an integrated approach between the Sub Antarctic Islands Conservation Management Strategy (CMS) and the Proposed Regional Coastal Plan: Kermadec and Subantarctic Islands. The islands themselves have the highest level of protection as Nature Reserves and the Board is of the view that the coastal environment is deserving of a similarly high level of protection.

No change.

The proposed plan recognises the islands themselves (both the Subantarctics and the Kermadecs) have one of the highest levels of protection in New Zealand statute as nature reserves under the Reserves Act 1977. Further, the Subantarctic Islands are also national reserves under the Reserves Act 1977 and have international status as world heritage areas. This world heritage status includes the coastal marine area and applies out to 12 nautical miles. The full coastal marine area of the Auckland Islands (i.e. to 12 nautical miles) is also a marine reserve (under the Marine Reserves Act 1971) and a marine mammal sanctuary (under the Marine Mammals Protection Act 1978). In addition to these protections, the proposed plan also recognises the remoteness and uniqueness of the two island groups and the high degree of endemism. Accordingly the approach taken is to manage activities in the coastal marine area of the islands in a precautionary manner that does not provide for development but does provide for protection and existing use provided it can be undertaken in sustainable manner that minimises the risk of adverse effects on the environment.

			In-Water Cleaning, and the relationship of those initiatives with the biofouling rules of the plan.	

Submitter No. 12 Heritage Expeditions Limited

Conservation Management Strategies

Oppose in Part

Tourism Research Consultants note the connection of the proposed plan to the Conservation Management Strategies (CMS) is not very clearly articulated. It is suggested that a more explicit statement about the relationship between the two is required, especially when the interconnectedness of the land and sea, and the need for integrated management is mentioned several times. Greater clarity over the area of overlap between the CMS and the proposed plan and what jurisdiction applies is required.

A more explicit statement about the relationship between the Conservation Management Strategies and the proposed plan, and provide greater clarity over the area of overlap between the CMS and the proposed plan and what jurisdiction applies.

The relationship between the Conservation Management Strategy (CMS) and the plan needs to be clear. The following will be included as a third paragraph under the title "Conservation management strategies" in the Integrated management section of the proposed plan: "The Conservation Act and the RMA establish distinct decision making processes to achieve different purposes. The purposes of the Conservation Act is about the preservation, conservation and protection of natural and historic resources; while the RMA is about the sustainable management of natural and physical resources. Where there is an overlap e.g. in relation to the foreshore associated with the Subantarctic Islands, which is administered under the Reserves Act then authority under both the regional coastal plan and the conservation legislation (which would be guided by the CMS) will be required."

Accept

Refer to the officer's reasons which are adopted. Changes required:

Include as a third paragraph under the title "Conservation management strategies" in the 'Integrated management' section of the proposed plan: "The Conservation Act and the RMA establish distinct decision making processes to achieve different purposes. The purpose of the Conservation Act is about the preservation, conservation and protection of natural and historic resources; while the RMA is about the sustainable management of natural and physical resources. Where there is an overlap e.g. in relation to the foreshore associated with the Subantarctic Islands, which is administered under the Reserves Act then authority under both the regional coastal plan and the conservation legislation (which would be guided by the CMS) will be required."

Submitter No. 2 Southland Conservation Board

Neutral

New information will be gathered in the process of reviewing the Conservation Management Strategy for the islands. Consider how such information could be incorporated into the proposed plan.

Consider how new information can be incorporated into the plan.

Once the plan has been notified and the submission period closed, the only way to change the plan (other than minor technical amendments) is to undertake a plan variation (before the plan is made operative) or a plan change or review (after the plan is made operative) - all of which must be undertaken in accordance with the provisions of the First Schedule of the RMA.

Reject

Refer to the officer's reasons which are adopted.

			<p>under the Marine Reserves Act 1971 and the Marine Protected Area Policy"; and include a new section titled "Marine reserves and the Marine Protected Area Forum for the Southern Ocean" with the following text: "The Marine Protected Areas Policy Statement and Implementation Plan commit the New Zealand government to protecting representative samples of the full range of marine habitats and ecosystems as part of a wider strategy to conserve New Zealand's biodiversity. The MPA Policy Statement sets out a series of high-level principles that will guide planning and prioritising the MPA network at the national level and the selection of possible MPA sites and management tools. There is a range of management tools that could potentially contribute to the MPA network, including marine reserves, Fisheries Act tools, Resource Management Act measures and other tools. On 29 January 2011 Minister of Conservation Kate Wilkinson and Fisheries Minister Phil Heatley announced three huge marine reserves totalling 435,163ha are to be established in the Subantarctic Islands. The Ministers' decisions will see a marine reserve cover the entire territorial sea - out to 12 nautical miles - surrounding Antipodes Island, with two further marine reserves around the Bounty Islands and Campbell Island, covering 58 percent and 39 percent of those islands' territorial seas respectively. New prohibitions on Danish seining will be introduced in the remaining territorial sea around the island groups, ensuring the entire area - 688,548ha - achieves Marine Protected Area status. The new marine reserves are to be established by special legislation. The intended boundaries of the reserves allows for the continuation of long-lining for ling in some areas around the Bounty Islands, as this method is targeted and has a limited by-catch. And there will also be a five-year window to allow for a potential deep-water crab fishery to be explored in the territorial sea beyond the marine reserve around Campbell Island. At the end of that period, it will be decided whether a crab fishery can be established or whether the entire territorial sea should become a marine reserve."</p> <p>All of the Kermadec Islands and the Auckland Islands are already full marine reserves to the outer limits of their territorial seas.</p>

Plan Section *Monitoring efficiency and effectiveness Subsection: None*

Submitter No. 6 **Sanford Limited**

Support in Part

Sanford acknowledges the Department's commitment to ongoing monitoring of the effectiveness and efficiency of this Plan and believes there is considerable value to be gained from an annual meeting with fishers. Information can be gathered on how the rules are working and the cost of compliance.

Amend monitoring section to include a yearly meeting with fishers and fishing companies who regularly work in the Subantarctic coastal marine area.

The plan notes that monitoring the efficiency and effectiveness of it is a requirement of section 35 of the RMA. Other than assuring users of the coastal marine area that the information collected during hull inspections will be used to monitor efficiency and effectiveness, the detail of how the Minister will give effect to the requirement to monitor efficiency and effectiveness will be determined outside the plan. This gives flexibility to amend a monitoring programme, if needed, without having to undertake a plan change. An annual meeting of all stakeholders would be useful, and could be written into any monitoring programme developed.

Accept in part

Refer to the officer's reasons which are adopted. No amendment to the plan is needed.

	<p><i>Oppose</i></p> <p>Sanford limited suggest an annual meeting of fishers and commercial fishing companies who work regularly in the Subantarctic Islands Coastal marine area. Such a meeting should be expanded to include a wide range of organisations representing the public interest. This should include representatives of the New Zealand Marine Sciences Society.</p>		<p>The plan notes that monitoring the efficiency and effectiveness of it is a requirement of section 35 of the RMA. Other than assuring users of the coastal marine area that the information collected during hull inspections will be used to monitor efficiency and effectiveness, the detail of how the Minister will give effect to the requirement to monitor efficiency and effectiveness will be determined outside the plan. This gives flexibility to amend a monitoring programme, if needed, without having to undertake a plan change. An annual meeting of all stakeholders would be useful, and could be written into any monitoring programme developed.</p>	<p><i>Accept in part</i></p> <p>Refer to the officer's reasons which are adopted.</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section	<i>Information to be submitted with a coastal permit application Subsection: None</i>			
Submitter No. 6	Sanford Limited	Amend to refer to RMA Schedule 4.	In the first paragraph of "Information to be submitted with a coastal permit application" (page 55) substitute references to the "Act" with "Resource Management Act". For consistency, the same change will need to be made to the section above (also page 55) "Monitoring efficiency and effectiveness"	<p data-bbox="2172 264 2249 291"><i>Accept</i></p> <p data-bbox="2172 306 2362 333">Changes required:</p> <p data-bbox="2172 365 2659 506">In the first sentence of the first paragraph of "Information to be submitted with a coastal permit application" (page 55) replace the word "Act" with "Resource Management Act 1991 (RMA)".</p> <p data-bbox="2172 537 2659 653">In the second sentence of the first paragraph of "Information to be submitted with a coastal permit application" (page 55) replace the word "Act" with "RMA".</p> <p data-bbox="2172 684 2659 800">In the first sentence of the first paragraph of "Monitoring efficiency and effectiveness" (page 55) replace the word "Act" with "Resource Management Act 1991".</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
------------	------------	---------------	--------------------------	-------------------------

Plan Section *Glossary Subsection: Ancillary craft definition*

Submitter No. 1 New Zealand Defence Force

Ancillary craft definition

Support

Amendment to the definition of ancillary craft in the glossary to ensure it includes all ship to shore craft that the RNZN consider essential to operations around the islands.

Amend the definition of ancillary craft to include: RHIBS (rigid hull inflatable boat) and LCM (landing craft medium).

The suggested amendment is supported. All ship to shore craft that the RNZN consider essential to operations around the islands should be include in the definition of ancillary craft. It is recommended the definition of ancillary craft be amended to include: "RHIBS (rigid hull inflatable boat) and LCM (landing craft medium)".

Accept

Amend the definition of ancillary craft in the glossary to include: "RHIBS (rigid hull inflatable boat) and LCM (landing craft medium)" for the reasons noted by the officer.

Further subs

30 New Zealand Seafood Industry Council Limited

Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
Ancillary craft definition	<i>Support</i> The NZ Defence Force seeks amendment of the definition of ancillary craft by including additional craft. SeaFIC notes that it allows for continuation of existing use of particular vessel types.			

Submitter No. 3 New Zealand Historic Places Trust

Definition of "Archaeological site"

Support

The NZHPT supports the inclusion of the Historic Places Act 1993 definition of archaeology.

No change.

Submitter No. 15 Minister of Conservation

Definition of "harmful organism"

Support

The definition should exclude species that have self-introduced.

Add the words "excluding self introduced species" to the definition of "Harmful organism"

The definition should be comprehensive. Add the words "excluding self introduced species" to the definition of "Harmful organism"

Accept

Refer to the officer's reasons which are adopted. Changes required:

In the Glossary, add the words ", excluding self introduced species" to the definition of "Harmful organism"

Submitter No. 6 Sanford Limited

Definition of Harmful organism

Oppose

Opposed to the definition of harmful organism on the grounds that it is impractical.

Amend by specifying/listing animal or plant pests (i.e. rats) and a schedule of Islands in pristine condition.

The suggested amendment is impractical and too narrow. It is not possible to anticipate and list all potential harmful organisms.

Reject

Refer to the officer's reasons which are adopted.

Submitter No. 6 Sanford Limited

Definition of heavy fuel oil

Oppose

Opposed to the definition of heavy fuel oil. The definition, and by default the rule, captures

Delete definition of heavy fuel oil; include a definition of LMO and MGO fuels.

Refer separate report regarding rule 48 and heavy fuel oil for discussion during the Hearing.

Reject

The definition of heavy fuel oil (HFO) is the same as the definition for HFO in MARPOL Annex 1.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
	<p>fishing vessels unnecessarily. See also our submission to rules 32 - 46.</p>			
Submitter No. 6	<p>Sanford Limited</p> <p><i>Neutral</i> Define territorial sea to remove uncertainty.</p>	<p>Include definition to read, '12 nautical miles'.</p>	<p>Include in the glossary the following definition: "Territorial sea means the territorial sea of New Zealand as defined by section 3 of the Territorial Sea and Exclusive Economic Zone Act 1977". This is the definition of territorial sea as it is included in the RMA and the Maritime Transport Act 1994. It is not technically correct to simply refer to 12 nautical miles.</p>	<p><i>Accept in part</i> Refer to the officer's reasons which are adopted.</p>
Submitter No. 6	<p>Sanford Limited</p> <p><i>Neutral</i> Define Fishing. Refer to the RMA Act definition.</p>	<p>Fishing (a) means the catching, taking, or harvesting of fish, aquatic life, or seaweed; and (b) includes (i) any activity that may reasonably be expected to result in the catching, taking, or harvesting of fish, aquatic life, or seaweed; and (ii) any operation in support of or in preparation for any activities described in this definition.</p>	<p>Include a definition of fishing in the glossary. Fishing has the same meaning as in section 2(1) of the Fisheries Act 1996.</p>	<p><i>Accept in part</i> Change required: Include a definition of "Fishing" in the glossary to read "Fishing has the same meaning as in section 2(1) of the Fisheries Act 1996".</p>
Submitter No. 6	<p>Sanford Limited</p> <p><i>Neutral</i> Amend plan to define "shipwreck" to remove uncertainty and confusion from interpretation of Rules 14 - 16.</p>	<p>Amend to read 'The utter destruction of a vessel by storm or collision'.</p>	<p>The suggested definition is too narrow. A shipwreck is what remains of a ship that has wrecked, either sunk or beached. Whatever the cause, a sunken ship or a wrecked ship is a physical example of the event. It is preferred to leave the term "shipwreck" undefined and rely on common dictionary meaning.</p>	<p><i>Reject</i> Refer to the officer's reasons which are adopted.</p>
Submitter No. 6	<p>Sanford Limited</p> <p><i>Neutral</i> Define fishing vessel to remove uncertainty.</p>	<p>Include definition, 'Any vessel engaged in the legal activity of fishing'.</p>	<p>Include a definition of "fishing vessel" in the Glossary as "Any vessel engaged in the legal activity of fishing".</p>	<p><i>Accept</i> Changes required: Insert definition for "fishing vessel" in the Glossary as "Any vessel engaged in the legal activity of fishing".</p>
Submitter No. 6	<p>Sanford Limited</p> <p><i>Neutral</i> Define New Zealand waters to improve certainty of rules.</p>	<p>Define "New Zealand waters" to read; 'Exclusive Economic Zone' ie 200 nM.</p>	<p>Include the following definition of New Zealand waters" in the glossary of "New Zealand waters" means: (a)The territorial sea of New Zealand; and (b)The internal waters of New Zealand; and (c)All rivers and other inland waters of New Zealand:</p>	<p><i>Accept in part</i> Change required: Include the following definition of "New Zealand waters" in the glossary: "(a) The territorial sea of New Zealand; and (b) The internal waters of New Zealand; and (c) All rivers and other inland waters of New Zealand"</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision	
Plan Section <i>Appendix 1 Maps Subsection: Anchorages</i>					
Submitter No. 6	Sanford Limited	<p><i>Oppose</i></p> <p>Opposed Appendix 1 Maps 1 to 8, Anchorages index. Captain Bucken's identifies safe anchorage sites, in reality there are many others. The Master of the vessel must be able to decide where they can safely go to weather a storm.</p>	<p>Delete all anchorage points by allowing anchorage for shelter as a permitted activity.</p>	<p>The 'preferred' anchorages shown on the maps and listed in the rules were selected to provide for existing use and concentrate anchoring at those preferred sites. The locations were consulted on with those existing users, including the scampi fishing industry. The Department consulted with the scampi fishing industry, given that they regularly shelter close into shore at locations around Auckland Island, to ensure we included their preferred locations, taking into account the variety of possible weather conditions. We accept that shelter during storm conditions is a matter of health and safety and note that at the beginning of the rules tables it is noted that "No rules can prevent vessels from accessing the territorial or internal waters for refuge in the event of an emergency or any other force majeure or when in distress or for the purpose of assisting others in distress or danger (refer UNCLOS article 18(2))".</p>	<p><i>Reject</i></p> <p>As indicated by the officer the anchorage sites were selected in consultation with existing users, including scampi fishers, to ensure preferred sites were provided for and options for the variety of possible weather conditions. It is logical to concentrate anchorage activities given the potential for adverse effects on the environment, including (but not limited to) the risk of terrestrial and marine biosecurity breach.</p>
Submitter No. 6	Sanford Limited	<p><i>Oppose</i></p> <p>Opposed to the MHWS table on Maps 1 to 8. Fishing vessels have on board technical equipment which supports the skipper's decision making. In modern times it is rare for a boat to hit rocks or come aground, which is what these meter triggers are aiming to prevent. In severe weather conditions a boat will often steam up and down, sometimes with a very tight turning point. It is unsafe to insist that the skipper choose a path based on an arbitrary line. While we have no view on boats greater than 125m and boats intending to land, skippers of fishing vessels must have the discretion to make decisions based on weather conditions, experience, the capability of their vessel and existing maritime law.</p>	<p>Delete 300m line Delete 300m to 600m Delete 600m to 1000m</p>	<p>The risk of oil spill and/or biosecurity breach are key issues for the proposed plan. The rules seek to reduce the risk of oil spill and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy. The zone inside 300m of MHWS, as the closest to shore, is the zone of highest risk. The 300m was selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible.</p> <p>The controls established by the zones and rules are not inconsistent with maritime law. The approach has been reviewed by Captain Kees Buckens of the New Zealand Maritime School and his report was reviewed by Maritime New Zealand. We accept that shelter during storm conditions is a matter of health and safety and note that at the beginning of the rules tables it is noted that "No rules can prevent vessels from accessing the territorial or internal waters for refuge in the event of an emergency or any other force majeure or when in distress or for the purpose of assisting others in distress or danger (refer UNCLOS article 18(2))". It is consistent with RMA coastal planning practice around New Zealand to impose stricter rules for high value areas. The alternative to the current vessel length and zones of access matrix, to make it simpler, is to remove the vessel lengths and multiple zones and require all access inside 600m from MHWS other than ancillary craft to obtain a discretionary coastal permit. This will allow case by case assessment of all the variables that could influence risk, such as vessel length, propulsion system, age of vessel, fuel type, duration of access etc.</p>	<p><i>Reject</i></p> <p>The risk of biosecurity breach and oil spill are identified as key issues for the plan. Using zones of access in order to reduce the risk of either event and provide for existing use as permitted activities is reasonable.</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Submitter No. 15 Map 3	Minister of Conservation <i>Support</i> The legend box for the "Port Ross southern right whale exclusion zone" should cross reference to rule 32. The text in the box should also clarify that the area is restricted to vessels under 75 metres i.e. vessels over 75 metres do not have access in the period 1 April to 31 October, as noted in rule 32.	Amend the legend box for the "Port Ross southern right whale exclusion zone" to cross reference to rule 32 and change the text in the box to say: "Access to the area is restricted to vessels under 75 metres".	The legend box is ambiguous as written and should be clarified. Amend the legend box for the "Port Ross southern right whale exclusion zone" to cross reference to rule 32 and clarify the vessel length. The text in the box to say: "Access to the area is restricted to vessels under 75 (refer rule 32)".	<i>Accept</i> Refer to the officer's reasons which are adopted. Changes required: Amend the legend box on Map 3 the "Port Ross southern right whale exclusion zone" to read: "Access to the area is restricted to vessels under 75 metres (refer rule 32)".
Submitter No. 15 Map 7	Minister of Conservation <i>Support</i> The legend box for the Snares Island exemption zone should cross reference to rule 34.	Amend the legend box for the "Snares Island exemption zone" to cross reference to rule 34 and change the text in the box to say: "Access for cruise ships using any fuel type subject to the conditions of rule 34".	It is useful for plan users and assists with implementation of the rules to provide relevant cross references.	<i>Accept</i> Refer to the officer's reasons which are adopted. Changes required: Amend the legend box for the "Snares Island exemption zone" on Map 7 to read: "Access for cruise ships using any fuel type subject to the conditions of rule 34".
Submitter No. 13 Maps 1 and 4	New Zealand Marine Sciences Society <i>Oppose</i> Oppose the symbols used in the keys to maps 1 and 4. The red anchor with the number 75 on the map is described in the key as being for vessels up to 25m.	Replace the red anchor on maps 1 and 4 with a red anchor allowing vessels up to 25 m to anchor there.	There is a typographical error in the Anchorage legend box on Maps 1 and 4 in Appendix 1. The red anchor should remain as 75 and the text next to it should be amended to note that it is for vessels up to 75 metres (if wind speed is <35 knots), not 25 metres.	<i>Reject</i> Refer to the reasons and decision on the submission from Heritage Expeditions on 'Appendix 1 Maps, Maps and surface water access rules'
Submitter No. 6 Maps 1 and 4 - wind speed restriction in Western Arm, Carnley Harbour.	Sanford Limited <i>Oppose</i> Opposed the wind speed restriction shown on Maps 1 and 4 . The wind speed is unclear in relation to vessel being a specified length.	Delete the wind speed restriction shown on Maps 1 and 4 .	There is a typo in the legend box of maps 1 and 4 explaining the red anchor in the Western Arm. The vessel length in the text should be 75m, not 25m. This will be corrected. The wind speed restriction is considered necessary for health and safety and to reduce the risk of incident. The Western Arm and Victoria Passage are challenging to navigate under any wind conditions, it is considered that the risk of incident for vessels greater than 75m is too great and accordingly they should not be allowed access and vessels less than 75m should have restricted access, i.e. in wind speeds less than 35 knots.	<i>Reject</i> As noted by the officer there is a typo in the legend box of maps 1 and 4 explaining the red anchor in the Western Arm, that will be corrected.
Submitter No. 15 Maps 1, 2 and 3	Minister of Conservation <i>Support</i> The vessel length for anchoring at Ranui Cove should be 75 metres.	On Maps 1, 2 and 3, pages 62 to 64, the vessel length for anchoring at Ranui Cove should be changed to 75 metres.	This is a typographical error, it was always intended to be 75 metres.	<i>Accept</i> Refer to the officer's reasons which are adopted. Change required: delete the number "25" from the anchor at Ranui Cove on Maps 1,2 and 3 and

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Submitter No. 12	Heritage Expeditions Limited	Make all the corrections noted above on the maps and in rule 46, and all references to vessel length on the maps be altered to show the recommended class 25 to 125 metres as permitted.	<p>(a) There is no need to show the Enderby anchorage, as confirmed by email (17 November 2009) from Heritage Expeditions Limited following consultation, the Sandy Bay anchorage is 360m, outside 300m zone; (b) the only anchorage agreed in the base of Port Ross is the 75m anchorage SW of Shoe Islands as shown on the maps; (c) the anchor shown as 25m at Ranui Cove is a typo, it was always intended to be 75m, Maps 1, 2 and 3 on pages 62 to 64 of the proposed plan should be changed to 75m; and listed in rule 46 as "Ranui Cove (east coast) Auckland Island"; (d) typo - the 75m anchorage shown at Musgrave Inlet should be included in rule 46 as a sub-bulletin the first bullet point list as "Musgrave Inlet (east coast) Auckland Island"; (e) Tagua Bay is shown on the maps and listed in rule 46 - no change needed; (f) typo - the 75m anchorage shown at Raynal Point (Carnley Harbour) should be included in rule 46 as a sub-bullet in the first bullet point list as "Raynal Point (Carnley Harbour) Auckland Island"; (g) typo - the 75m anchorage shown at Coleridge Bay should be included in rule 46 as a sub-bullet in the first bullet point list as "North of Mask Island (Carnley Harbour) Auckland Island"; (h) typo - the 75m anchorage shown in Western Arm should be included in rule 46 as a sub-bullet in the first bullet point list as "Western Arm (Carnley Harbour) Auckland Island provided wind speed is < 35 knots"; and the text in the legend box for Anchorages next to the red anchor needs to be amended to say "For vessels up to 75 metres (if wind speed is <35 knots)"; (i) typo - the 75m anchorage shown at Perseverance Harbour should be included in rule 46 as a sub-bullet in the first bullet point list as "Perseverance Harbour Campbell Island".</p> <p>The risk of oil spill and/or biosecurity breach are key issues for the proposed plan. The rules seek to reduce the risk of oil spill and/or biosecurity breach by restricting access close in to shore using vessel length as a proxy. The zone inside 300m of MHWS, as the closest to shore, is the zone of highest risk. The 300m was selected on the basis that is the generally accepted limit the Norwegian rat can swim. The rationale for the zones is that they attempt to provide an accepted level of risk for existing use as a permitted activity where possible, based on vessel length as a proxy for the numerous variables that would contribute to a vessels risk assessment.</p> <p>The alternative to the current vessel length and zones of access matrix, to make it simpler, is to remove the vessel lengths and multiple zones, and require all access inside 600m from MHWS other than ancillary craft to obtain a discretionary coastal permit. This will allow case by case assessment of all the variables that could influence risk, such as vessel length, propulsion system, age of vessel, fuel type, duration of access etc.</p>	replace it with the number "75".
				<i>Accept in part</i>
Maps and surface water access rules	<p><i>Oppose in Part</i></p> <p>Further to consultation, there are a number of errors or omissions in the maps in relation to anchoring, existing anchorages and the related rules: (a) Enderby Island anchorage not shown on the map or included in rule 46; (b) Erebus Cove is not shown on map as SW of Shoe Island or included in rule 46; (c) Ranui Cove is shown for vessels up to 25 metres - it needs to allow larger vessels and be included in rule 46; (d) Musgrave Inlet is shown on the map but not included in rule 46; (e) Tagua Bay - shown on the map - very historic anchorage (f) Raynal Point (Carnley Harbour) is shown on the map but not included in rule 46; (g) Coleridge Bay is shown on the map but not included in rule 46, also the description of this anchorage should be amended to read "North Mask Island" based on experience of trying to anchor to access Camp Cove in the 2010/11 season; (h) Western Arm is included on the map but not shown in rule 46, also wrongly recorded in the key; (i) Perseverance Harbour shown on the map but not included in rule 46. Further, the maps should allow for anchoring for vessels up to 125 metres as per earlier submission.</p>			Refer to the officer's reasons which are adopted. A revised set of maps with the changes below is included as Attachment 1 to this decision to replace the maps in Appendix 1 of the proposed plan.
				Changes required:
				<p>Change the 25m at Ranui Cove to 75m on maps 1, 2 and 3.</p> <p>Add a 4th hollow bullet point in rule 46 as "Ranui Cove (east coast) Auckland Island"</p> <p>Add a 5th hollow bullet in rule 46 as "Musgrave Inlet (east coast) Auckland Island"</p> <p>Add a 6th hollow bullet in rule 46 as "Raynal Point (Carnley Harbour)"</p> <p>Add a 7th hollow bullet in rule 46 as "Coleridge Bay, North of Mask Island (Carnley Harbour) Auckland Island"</p> <p>Add an 8th hollow bullet in rule 46 as "Western Arm (Carnley Harbour) Auckland Island provided wind speed is < 35 knots"</p> <p>Add a 9th hollow bullet in rule 46 as "Perseverance Harbour Campbell Island"</p> <p>In the legend boxes on maps 1 and 4 that refer to Anchorages next to the red anchor, replace "25" with "75"</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
------------	------------	---------------	--------------------------	-------------------------

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section	<i>Appendix 2 Cultural and historic heritage Subsection: None</i>			
Submitter No. 9	Andy Dodd			<i>Accept in part</i>
	<p><i>Support</i></p> <p>The list of protected heritage and the way the selected sites for the Kermadecs have been described needs to be revised. K036/1 has been listed twice and as the rules are directed at activities which are limited to those occurring within the coastal marine area terrestrial sites that do not extend into the coastal marine area should be excluded. The Low Flat site and some of the dune burials should be included on the grounds that they are prone to coastal erosion and may potentially be damaged by activities occurring on the adjacent foreshore. While they are not recorded, recommend adding the Wairuna shipwreck (off the north coast) and the Fleetwood Denham grave (on the Denham Bay foredune) on account of their historic significance.</p>	<p>Appendix 2 be amended so the list of site on Raoul Island reads as follows: Raoul Island/K036/1/ Low Flat prehistoric settlement Raoul Island; K036/5/Rosa Y Carmen burials Raoul Island; K036/23/Picton shipwreck Raoul Island; K036/24/Shiner shipwreck Raoul Island; K036/27/Kinei Maru No.10 shipwreck Raoul Island; K036/28/SalanoShipwreck Raoul Island; Wairuna shipwreck Raoul Island; Fleetwood Denham grave Raoul Island.</p>	<p>It is recommended to accept all the sites except the Fleetwood Denham grave at Raoul Island and Low Flat prehistoric settlement at Raoul Island because these sites is above MHWS, and therefore outside the jurisdiction of this plan.</p>	<p>Refer to the officer's reasons which are adopted and the submissions from the NZ Historic Places Trust on Issue 3, Policy 34, Other methods and Appendix 2.</p> <p>Changes required:</p> <p>Add the following to the list of sites at Raoul Island in Appendix 2 of the proposed plan, as included in the revised list of sites for Appendix 2 included in Attachment 2 to this decision:</p> <p>K036/5 Rosa Y Carmen burials K036/23 Picton shipwreck K036/24 Shiner shipwreck K036/27 Kinei Maru No.10 shipwreck K036/28 Salano Shipwreck Wairuna shipwreck</p>
Submitter No. 15	Minister of Conservation			<i>Accept</i>
	<p><i>Support</i></p> <p>Many rules in the plan refer to this Appendix. The approximate sites need to be mapped so the permitted activity rules can be given effect to.</p>	<p>Maps be included or amended to show approximate locations of cultural and historic heritage.</p>	<p>Given that a number of the rules in the proposed plan contain a condition requiring the avoidance of adverse effects on sites of cultural or historic heritage the sites should be shown on the maps. In instances where the actual location is not known, the general location should be shown.</p>	<p>Refer to the officer's reasons which are adopted. Maps showing the locations of sites of cultural or historic heritage listed in Appendix 2 of the proposed plan are included with this decision as Attachment 2.</p>

Further subs				
34 New Zealand Historic Places Trust				
Subsection	View Submission	Relief sought	Officer's Recommendation	Commissioner's Decision
	<p><i>Support in Part</i></p> <p>NZHTP is supportive of the proposal to include sites listed in Appendix 2 on the maps in Appendix 1. However, it is difficult to see the benefit of including all known sites where these would not be regulated or protected by the rules of the coastal plan. It is considered that to add all of the known items would cause confusion for users of the coastal plan in terms of consent requirements for sites displayed on the maps but not necessarily listed in Appendix 2.</p>		<p>Appendix 2 includes all known sites of cultural and historic heritage located in the coastal marine areas of the Kermadec and Subantarctic Islands. Only those sites listed in Appendix 2 should be shown on maps in the plan, and the relevant rules should cross reference with the relevant maps.</p>	<p><i>Accept</i></p> <p>Refer to the officer's reasons which are adopted and the maps in Attachment 2 to this decision.</p>

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section	<i>Appendix 3 Vessel hull and niche area inspection form for voluntary approach until 1 year after the plan becomes operative</i>	Subsection: Approved diver inspector		
Submitter No. 6	Sanford Limited			
Approved diver inspector	<i>Support in Part</i> Support the website link; amend to include criteria and process for divers to gain accreditation. Unclear what criteria DOC will use to approve alternative inspectors.	Include criteria and process for passing accreditation and DOC criteria for approving non-accredited inspectors.	Information detailing what is required of diver service providers to be "an approved dive service provider" to undertake in-water inspections should be provided on the DOC website as follows: "Divers must fulfil the requirements laid down in the H&S in Employment Regulations 1995. In particular they must hold a current certificate of competence for the category of diving required (Part III, 27) and meet the 'requirements of diver' (Part III, 32). All inspection work and cleaning are defined in the Regulations as "Construction Work"."	<i>Accept</i> Although not part of these formal decisions it is recommended that the DOC website should include the following: "To be approved the inspectors must be: Independent from the vessel owner/operator/company; and be qualified construction divers. Divers must fulfil the requirements laid down in the H&S in Employment Regulations 1995. In particular they must hold a current certificate of competence for the category of diving required (Part III, 27) and meet the 'requirements of diver' (Part III, 32). All inspection work and cleaning are defined in the Regulations as 'Construction Work'." Although not part of these formal decisions it is recommended that the DOC website should include the following: "To be approved the inspectors must be: Independent from the vessel owner/operator/company; and be qualified construction divers. Divers must fulfil the requirements laid down in the H&S in Employment Regulations 1995. In particular they must hold a current certificate of competence for the category of diving required (Part III, 27) and meet the 'requirements of diver' (Part III, 32). All inspection work and cleaning are defined in the Regulations as 'Construction Work'."
Submitter No. 6	Sanford Limited			
	<i>Support</i> Support voluntary approach and retain for life of plan; hull inspections only to be required for vessels landing.	Retain voluntary approach for the life of the plan.	The voluntary approach was included in the proposed plan to allow a lead in time for vessels. The risk of biosecurity breach is a key issue for the proposed plan. A voluntary approach is not considered to provide enough assurance of protection of such high value areas. The consultation document released by MAF Biosecurity New Zealand during the development of the draft Import Health Standard for Biofouling acknowledges that New Zealand's high values areas such as the Subantarctic Islands warrant special inspection and treatment processes (MAF BNZ Consultation paper 10/04 May 2010, paragraph 58). It is consistent with RMA coastal planning practice around New Zealand to impose stricter rules for high value areas. There is a risk to the Minister of not fulfilling her obligation to achieve the purpose of the RMA - sustainable management of the natural and physical resources of the islands - if she were to use a voluntary approach to address a key issue such as the risk of biosecurity breach. She also has an international obligation given the World Heritage status for the Subantarctic Islands. The NZ government has sent a clear signal how it values the Subantarctic Islands recently with the announcement of its intention to create further extensive marine reserves around the Campbell,	<i>Reject</i> While it is reasonable to have a voluntary approach as a short lead in period to allow vessels to prepare for a new regime, a voluntary approach is not sufficient to manage the risk of a biosecurity breach for such high value areas long term.

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Submitter No. 6	Sanford Limited	Delete reference to Department confirming compliance.	It is the responsibility of the operator to ensure a copy of the inspection form has been sent to the Department to ensure compliance with the rule (Rules A, 26 or 27) to meet the conditions of the permitted activity. The advice note re-inforces and clarifies the responsibility as required on the first section of the report form, to be completed by the applicant/vessel operator.	<i>Reject</i> Rules A and 26 require the completed inspection forms be sent to the Department of Conservation Area Office as soon as possible, but before entering the coastal marine area of the islands. The advice note simply provides further clarity on this requirement.
Note for applicant	<i>Oppose</i> Oppose note for the Applicant . The Department should not need to confirm that the Operator has met all the required standards for the permitted activity. If the hull and niche inspection is passed by an approved inspector that should be sufficient.			
Submitter No. 6	Sanford Limited	Amend accordingly.	In the first instance it is the inspectors responsibility to send the completed inspection form to the Department and the applicant/vessel operator. It is the responsibility of the applicant/vessel operator to ensure that the inspector has sent it, as a safe guard and in their best interest.	<i>Reject</i> Refer to the officer's reasons which are adopted.
Note for the Inspector	<i>Oppose</i> Oppose - Note for the Inspector. If it is the responsibility of the Operator to ensure the certificate is passed on to the Department; then the inspector should be sending the form back to the Operator. Otherwise how can the Operator be confident that it has been sent on?			

Subsection	Submission	Relief Sought	Officer's Recommendation	Commissioner's Decision
Plan Section	<i>Appendix 4 Vessel hull and niche area inspection protocols and forms for rules 26 and 27 Subsection: None</i>			
Submitter No. 6	Sanford Limited	Delete Appendix 4	<p>Floerl et al. 2010 also recommend that all vessels, including privately owned craft such as yachts, are subject to a biofouling inspection unless they can demonstrate that their last anti-fouling paint renewal occurred 4 weeks or less prior to the time they intend to visit New Zealand's offshore islands. However, other submitters (Talleys and SeaFIC) have suggested that an alternative approach could be considered based on evidence of good vessel hygiene as a key to minimising marine biosecurity risk. It is recommended that an alternative option be included that allows a vessel exemption from the in-water inspections if the vessels anti-fouling is less than 6 months old for the duration of the time that the vessel is in the coastal marine area of the islands. The alternative option could be included as a part of rule 26, under the Standards/Terms/Conditions below the bold words "And either:" to be worded as follows:</p> <p>"The vessels anti-fouling is less than 6 months old for the duration of the time that the vessel is in the coastal marine area of the islands"</p>	<p><i>Reject</i></p> <p>Refer to decision and reasons given in relation to the hull fouling rules, rules A and 26.</p>
